

**Item 1:** The document released under FOI 4077 contains a list of batch numbers and 'dose in series' for suspected adverse events in people who received a COVID-19 vaccine. Dose in series is the reported location in an order or sequence for when the dose was administered, for example if it was the first, second or third dose of a COVID-19 vaccine received. The quality and completeness of the information is dependent on the data provided by the reporter.

The file contains one data row for each distinct report associated with a suspected/interacting COVID-19 vaccine in an accepted adverse event case created between 10 January 2022 and 8 November 2022 where the outcome of the adverse event was reported as fatal. Some adverse event reports provide dose number and batch number for multiple COVID-19 vaccine doses. Where more than one dose was included in a case the information for any additional doses and associated batch numbers is provided in adjacent columns.

Since the beginning of the vaccine rollout to 13 November 2022, about 64 million doses of COVID-19 vaccines have been given in Australia. The TGA has identified 14 reports where the cause of death was linked to vaccination from 944 reports received and reviewed.

**Item 2:** FOI 4077 also requested information about why case number 724925 no longer appears in the DAEN. This report was rejected following review of further information for the case. The information demonstrated that the report was submitted as a hoax and as such there is no identifiable patient. The report remains in the TGA's internal database. However, it no longer is included in the DAEN as it has been rejected because it no longer met the minimum criteria for a valid adverse event report.
