

SUBMISSION TO CONSULTATION: Regulatory options for appropriate access and safety controls for alkyl nitrites.

I am a 33-year-old gay man who uses amyl product as a therapeutic sex aid.

My sex life would be vastly different were it not for this muscle relaxant.

If it was not available, it would have a significant impact on my domestic life with my partner and my mental health because our sex life would be diminished.

I am educated about the potential risks and side effects – as I am with other drugs such as alcohol. However I would welcome further guidelines or appropriate regulation/s.

If Viagra and similar products are available to straight men, why should this essential sex aid not be available to gay men?

Thank you for considering my submission.
