Dear colleagues,

Following our previous communications concerning Poly Implant Prothese (PIP) Breast Implants, including NCAR FR-2010-03-30-007, we would like to inform you that several documents related to PIP silicone filled breast implants, and especially information about the dates when the results of the tests will be available, have been published in English on our website at the following addresses :

<http://www.afssaps.fr/Infos-de-securite/Points-d-information-Points-d-etape/Implants-mammaires-en-gel-de-silicone-de-la-societe-Poly-Implant-Prothese-Point-d-information>  
and <http://www.afssaps.fr/Afssaps-media/Publications/Information-in-english>, in the "Recommendations" part .

In order to carry on our assessment of this file, we would be grateful if you could let us know if some tests have been performed in your country. If yes, please provide us with the results as soon as they are available.

Moreover, we would be very interested in the vigilance data you might have collected on those implants, in particular the rates of ruptures and siliconomes observed in your country.

This email is sent to the "vigilance" contacts and to the "**COEN**" contacts in order to reach as many people as possible : a coordinated answer would be most welcome.

Thank you in advance for your help.

Kind regards

AFSSAPS
