Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Friday, 22 May 2020 4:29:31 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have family members who have had positive outcomes from using CBD oil safely without advice for anxiety, sleep disruption and joint pain. I would love for them to be able to source CBD and be confident as to the content which is currently all but impossible. Without good standards, we can't know the efficacy or the strength and things like RBT drug tests are concerning. This is a product that has been consumed by humans for eons, I am not concerned about the safety or whether it 'cures' anything. Experientially, it works for what we want to use it for and creating standards around strength and quality will make this replicable. Meanwhile, serious testing to provide evidence for various disease intervention can continue, but I don't need this for a good quality, standardised product to be useful and beneficial for me and my family members.

CBD prices should be kept as low as possible to allow access for folks with limited funds. Anxiety, sleeplessness and joint pain are not confined to the affluent.

Provide manufacturing standards that when complied with may be displayed on products so that consumers can be confident as to strength and quality of the product.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Friday, 22 May 2020 4:23:19 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

In relation to s.52E of the Therapeutic Goods Act:

(a)

The risks of a high number of pharmacological substances routinely marketed to the public as healthy self-medication choices are far higher and warrant far more attention than any risk that has emerged from use of CBD.

Aspirin, for instance, used ubiquitously for mild pain conditions and available over the counter, contributes to stomach ulceration, routinely leads to repeated cardiovascular accidents, and may be a chief immediate contributor to cardiovascular deaths. Cigarettes, again ubiquitous as relievers of stress, and alcoholic beverages, even more popular for relieving anxiety, between them contribute inordinately to the pathologies underlying every major cause of death in Australia and a few lesser causes as well. The personal, economic, and social costs of these self-medicated drugs are beyond calculation.

The TGA's lack of concern in the public's ability to keep itself safe from harm by all of those known dangers suggests that the public-health implications of making CBD freely available for self-medication should be of no possible concern in amending the schedules. Possibly none of the hundreds of drugs already freely available over the counter at pharmacies and supermarkets enjoys a history as free of untoward side effects as CBD.

(b)

The potential value of CBD's free availability extends well beyond removal of the temptation to obtain it by means that bypass all regulation in manufacture. The value includes the potential to

replace medications currently with primary consequences in slowly cumulative damage to vital organs and secondary consequences in traffic and industrial accidents due to impaired consciousness with a substance bearing none of these consequences, with the flow-on benefit of potentially reducing, even if by only a little, the national health burden.

(c)

Even the potential problem of least concern, habituation to a homeostatic balance that depends upon use of a substance, a problem attending use of many over-the-counter medications, appears not to attend CBD use. More serious untoward effects — even ones commonly enough attending present OTC medications (including liver and kidney toxicity, impairment of consciousness, and death by CVA) — make no appearance in the literature on CBD.

(f)

Merely the potential to replace some use of substances causing greater harm, including tobacco, alcohol, and aspirin, with a substance that has been cleared of causing major harm in use for relieving mild pain, stress, and anxiety will mean that CBD's availability has the potential to facilitate significantly healthier lifestyles and outcomes for many.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

The proposed change of having CBD widely available is of great interest to me as after poring through the research I believe that it is an incredibly safe and beneficial product that can be used to treat a variety of ailments. The change the TGA would make would make this amazing substance widely available and improve the health and wellbeing of not only my family, but every Australian.

As long as the price was fair for the product I don't mind. I would prefer to pay more for a higher quality product. I think a lot of Australians would prefer it be cheaper but at the cost of quality it is 100% not worth it.

I think it should be available in Pharmacies for the general public to access and should be used as commonly as Panadol or Nurofen due to the vast array of benefits it provides.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a writer for medical cannabis companies around the globe and a training allied health professional I have researched the effects of cannabis and CBD extensively. The safety profile of CBD is better than many of the pharmaceuticals that are regularly prescribed and would add value and quality of life to the experience of many.

I've lived in areas where CBD is legal and the benefits to health and wellbeing are undeniable. Personally it has helped me for chronic pain and sleep. And I know of endless anecdotes and individuals from clinical trials who have received benefit from CBD.

With no potential for abuse and endorsement from the WHO, I believe CBD will have positive impacts on my personal wellbeing as well as that of the wider community. If nothing else offering individuals the choice to partake in their own health and wellbeing, by taking a safe and regulated product will have positive impacts for many.

The price of CBD is important to allow widespread access to many. However should not come at the expense of quality. Currently a standard daily dose of medical grade CBD averages at about \$150 AUD per month. I think over the counter costs should not exceed medically prescribed costs.

I believe having CBD accessed at chemists and health food stores would highlight the fact that it is not a food substance or something to take without reading the label. It has active properties and should be treated as such. However I also believe it should not need to be prescribed or recommended from behind the counter. Consumers should have OTC access.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I am a medical herbalist and have sourced cbd for clients, friends and family with significant results. One client was prescribed endones for chronic pain he also suffered insomnia due to the pain. CBD eased his pain to such a level he was able to sleep through the night. Another adolescent relative has Aspergers which manifests as violent meltdowns. CBD has reduced these outbursts significantly. I personally use CBD daily as part of my wellbeing program. I believe it assists with anxiety, pain relief and gastrointestinal disorders.

I believe quality CBD should be available from manufacturers who use product from licensed growers. Bring it out of the shadows and name the legal growers and the legal manufacturers. Make it available through complementary health care professionals who only purchase from registered and licensed producers.

Chronic pain following back injury and surgery 20+ years. Even if I could have it now the cost is prohibitive and the fact I could still get picked up for driving with an A class drug I wouldn't take it. It was offered as an option by a pain specialist. Get the law changed for those who need to take it along with being able to access and afford the drug. From my perspective and understanding the government has said yes you can have it but first you have to climb Mt Everest. Too many road blocks in the way of actually using it at this time.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I would like access to CBD oil to treat oestroarthritic pain and the stress, anxiety and lack of sleep associated with this disease. I have become sensitive to pharmaceutical drugs and am experiencing very uncomfortable side effects. At the moment I'm trying to tolerate the pain without drugs but it is very uncomfortable and debilitating, as I live alone and am finding it difficult to manage my life.

Lower prices would be preferable of course as long as the drug is safe and free of THC. Money is a big issue as my income is very lowd

Without knowing more about access, I cannot answer this knowledgably

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My findings have informed me that CBD could benefit many people from various ailments. I would like CBD to be easily available for myself or my loved ones and friends, and anyone else for that matter, should the time arise to warrant trying it. It may not suit everyone, and yet there would be no nasty side effects, either. Both my parents experienced a lot of discomfort in their latter years, and something closer to nature may have given them relief when they needed it most. There are plenty of pharmaceutical products already on the market that do have nasty side effects, so to be able to have something economical that has been used for centuries by various folks would be very appreciated in the future. Thank you.

I think that CBD should be kept at a low price so that everyone can afford it if they prefer it to other products.

Over the counter purchases would be preferred.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Last year, my husband was diagnosed with a minor medical condition that he was very reluctant to take pharmacological medication for. We tried many ways of accessing CBD oil to no avail. We did not want to purchase any online from overseas because the quality and effectiveness and outlandish claims (in some cases) cannot be relied upon and there is no authority to complain to if any problems are encountered. So my husband went with the pharmaceutical medication that caused so many unpleasant side effects that he had to cease it. Consequently, he is not taking anything and the condition has barely improved. We believe CBD oil would be very beneficial and if purchased in Australia from Australian made sources, we would have very few issues. If there were issues, we could turn to TGA.

CBD oil should be able to be accessible for all regardless of income.

It should be monitored and approved by TGA and should have a TGA approved sticker or code or some such on the bottle.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have suffered for 30 years with IBS symptoms that Doctors have continually failed to treat effectively. I was even told by a specialist gastroenterologist in my early 20s that IBS didn't exist and it was "all in my head". It has been a very frustrating experience and I have tried many remedies but continue to have symptoms. I have also suffered bouts of insomnia which affect my day to day ability to focus and function. More recently with perimenopause the insomnia has returned and in addition a weakened bladder from childbirth means I am often up several times a night which causes fatigue and ongoing emotional distress.

I have read extensively about the successful treatment of IBS, insomnia and urinary frequency with CBD oil but due to restrictive measures in place I have been unable to access or try it. It would be wonderful to have access to something that is safe, effective and allows me a good night sleep, without the side effects of conventional pharmaceutical drugs.

Currently the price of CBD is prohibitive as in order to obtain long term improvements in urinary frequency, insomnia, fatigue IBS and menopausal symptoms I imagine I would need to take CBD continuously for the foreseeable future.

I have read widely on the positive impacts to people's lives with the same/similar symptoms as me (and there is a significant number of us - bladder weakness, insomnia and fatigue affect a large proportion of perimenopausal and post menopausal women). With access to CBD being so restricted and cost being prohibitive, the benefits and so improved quality of life are simply not available. There are also numerous studies showing other health benefits during menopause including balancing hormones and potential cancer prevention (very relevant to this age group). And without the side effects of conventional HRT. So as I see it there is really only upside to making CBD available to the wider adult community. Community pharmacy remains best placed to make CBD widely available as local pharmacies have greatest knowledge of existing patient treatment protocols, any potential interactions

and they are the most able to monitor and control dose and ongoing patient care..

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Have not used but as an Acupuncturist and Naturopath, have had a few clients who have been using for pain relief. I think that it's important that Australians have access to Australian produced, safe doses of CBD oil

If people are not employed (during this time of COVID-19 Unemployment rate increased 1.0 pts to 6.2% and Underutilisation rate increased 5.9 pts to 19.9%: source ABS.gov.au) they have little to nothing in the way of financial resources. If people are effected by chronic pain/stress etc and need to use CBD oil, they are generally not working. Current price for CBD oil if not prescribed by GP is prohibitive, thereby excluding the very people who may need it. Lower prices may mean that those who need this (well regulated) medicinal oil will be more able to access it and experience the benefits it offers.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

We have not personally used CBD oil within our family but I have heard amazing success stories and I believe this product can make amazing changes to peoples lives.

It's not so much about price. I look at where the products come from, how they have been made, grown etc. I am very particular with the products we use in our house.

Informed choice is key in my opinion. People have the right to know what is available.

There are so many medicines that are advertised that whilst they may help with a particular thing they are terrible for our gut health and immune system but when it comes to natural products it seems to be very difficult to get through.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I know a number of people in the US who use regularly and feel it is beneficial for them. I believe we should be able to have access to such products, provided they are of high quality and the market is monitored well.

I don't think it needs to be really inexpensive but the price needs to be realistic. \$30-\$50 perhaps? If people feel it is beneficial they will pay it. It can't be out of the reach of your average person. Don't sacrifice quality for price though. Cheap products will just flood the market with rubbish.

I would be happy to access via a pharmacist. I think a blend of the TGA & Hybrid proposals. Good quality, good price. Surely there is plenty of research out there that this product works!

Only publish my submission on the TGA website with confidential information redacted. Do not publish my name. The rest is fine.

I would use CBD in a safe way and read the label and warnings.

I have reduced the pain, symptoms, and side-effects of spinal cancer and its sickening treatments, with CBD oil. I am able to sleep better, and with much reduced pain through use of this herb. Currently the cost via prescription, of approx \$800 for one script is prohibitive to those on average wages and incomes. I would welcome CBD being much more readily available and at lower cost.,

Lower prices of CBD would be much more affordable for the majority of Australians with painful conditions, and medical situations that would benefit from an affordable medicine to help them. I don't really have any issues with it being available via prescription, or available from chemists, but it should be affordable. Eight hundred dollars for a script that lasts for two months is unaffordable, esp for those who need it most as they're often not working or unable to work due to their condition,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have many friends who have imported CBD into Australia for health reasons such as chronic pain from various origins. They are therefore using CBD without evidence-based dosage or supervision, none of them follow peer-reviewed research papers, they just Google everything and take each other's advice, the blind leading the blind.

I am a qualified nutritionist (Bhsc) and I am upset that I cannot officially help patients to get better therapeutic outcomes. At the same time I have a friend who has Parkinson's, RA and ALS (true!) and she does not use CBD because it is not legal. So much of her extreme suffering would be alleviated by CBD. So I think only practitioners - CAM practitioners are trained and knowledgeable in prescribing to assist with treatment of numerous chronic diseases and conditions where CBD has been shown to be helpful. Although pharmacists are trained in the biochemistry of the drugs, they are not trained in diagnosing. In my opinion a pharmacist cannot assess from an 'over the counter' chat whether someone's condition would benefit from CBD, a consultation is necessary. Therefore only medical practitioners and accredited CAM practitioners should be allowed to prescribe CBD.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Patricia Taylor

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

A close relation is in a lot of pain from needing a knee replacement, but is unable to get in for an operation, due to Covid. She has never used cannabis, and never wanted to, but she has said she would really like to try the CBD oil to help her with the pain, while she waits for the operation. I think she would even start to consider looking into finding some, without the pharmacist's advice.

I know of a number of people in a similar situation, but are unsure about getting it without TGA approval. There are also some who are in so much pain, they are considering looking into getting it without TGA approval.

I believe the current pricing for CBD oil is completely prohibitive for most people. I know my relative couldn't afford it at that price and neither could the average person. I believe the price is very important because if they can't get the oil at an affordable price, it may mean they look for less legal methods of acquiring it.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a Naturopath I am unwilling to take strong painkillers, so when my left knee became very painful I started taking CBD oil which I sourced locally from a reputable manufacturer. A number of people in my town are also taking CBD oil (in capsules freshly made each dose) for variety of reasons, from Parkinsons, anxiety and joint pain. Most are extremely satisfied with the results and continue to re-order. As there are no side effects they feel safe taking it. However, if CBD was more available, perhaps it would not be so expensive.

As so many older Australians receive a pension it would be a great help to their budget if CBD was available at a cheaper price, without the quality being compromised. However, it seems price is not a great deterrent for a product that is so effective. Better than a lot of cheaper drugs with side effects.

CBD could be available from Naturopaths, chemists and of course from their doctor. Natural therapists have a great understanding of the whole body principle of health care, and could monitor the progress of their patients.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My father, now deceased, was in pain, had liver disease and couldn't take pain medications from the doctor or pharmacist. He found great relief from CBD oil in the last years of his life.

It improved his quality of sleep, reduced pain and improved his appetite. He also experienced anxiety and found relief from that as well.

Medicine should be accessible to all.

CBD should be available to all people as an over the counter medication at a cost that all can afford.

It has none of the side effects that can be found when using pharmaceutical drugs so that will be safer for the person using it

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have Fibromyalgia and other more minor symptoms that the medical profession has been unsuccessful in treating despite years of trying various things. I can't work due to the pain, but the govt won't allow me access to the Disability Pension. Therefore, I need to work to survive but the pain in my body has resulted in me losing 6 jobs in the past 2 years. I've seen hundreds of research reports that show a significant improvement in pain levels of people suffering from Fibromyalgia with high quality CBD oil. Due to being unemployed I can't access CBD oil right now for various reasons. I would be very grateful to be able to try this oil for myself in the hopes that it reduces my pain enough for me to continue working.

Due to being unemployed because of a diagnosis of Fibromyalgia and unsuccessful treatment by the medical industry, I am unable to afford CBD oil. I would be grateful for easy access to low cost, high quality CBD oil in order to test its effectiveness with reducing my pain so I can re-enter the workforce and actually be able to keep a job.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil and it worked better than tramadol for my chronic arthritis pain in both my shoulders, it made me feel human again and had better control of my pain than with tramadol.

I paid 300 aud for 25ml of CBD oil, tge dose that work for me was 1 1/2 ml per day, at that price I could not afford staying on it and had to go back on tramadol.

Over the counter at a pharmacy,

I would use CBD in a safe way and read the label and warnings.

Last year I had a lot of stress due to work resulting in high levels of anxiety and insomnia, my nervous system was in overdrive. Whilst working through the situation CBD oil helped me get sleep and relieved my anxiety so I could make big life changes. I haven't used it for months now, only used it when I needed and never the full dose of 80mg.

The oil I used was standardized and brought in from USA, I had to buy it "illegally" yet it was the only thing that helped me get my life back on track.

I believe it's benefits are enormous and this medicine should be available for people who need it and at an affordable price too.

\$200 for 25ml is an astronomic price for something that grows easily and can be purchased overseas much cheaper

There is so many exceptional results, studies, peer reviewed articles etc on the benefits of CBD, it should be more available in as a good quality and standardized medicine for Health Care Professionals including Natural Therapists such as herbalist and naturopaths who study and understand interactions within the body.

I would use CBD in a safe way and read the label and warnings.

I have been researching the effects of THC and CBD from plant based when my wife got cancer in 2015. The proposal should also take into consideration allowing the oil to be infused into edibles.

Price is always important. We have near perfect growing conditions in Australia due to the land mass of our country and weather. We could be world leaders in agriculture for such plants and manufacturing the oil. Australia is seen as clean beautiful good systems and our food and resources wanted around the world. This would be another great industry. Therefore with more producers comes cheaper prices that will filter down to consumer's

Lets not try and reinvent the wheel. Why don't we look at overseas operators already doing what we want to achieve and invite them to partner up with Aussie start-ups like a 50/50 share maximum ideally 20% from overseas 80% local owned. Then we bring in experts in packing houses, producers, research groups, etc to build our industry here. Then you utilise these producers because you would already have them pre approved under strict licencing that they are reputable to produce the oil, then you allow them to set up online distribution channels, partner up with chemists, medical groups, hospitals, health food shops, etc for distribution channels,

I suffer from Vulvodynia & Interstitial Cystitis & admin a couple of International groups for these illnesses. There is no cure for these conditions. Only medications such as nerve pain treatments which really aren't that successful.

I know that some of the girls in the group in the USA & the UK are using CBD & are getting great results in managing their pain from it.

As I am on a Disability Pension I would not be able to afford CBD if it's cost was at the higher end of the scale.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe low dose high quality CBD oil should be available to the general public due to the benefits people (loves ones) are reporting in regards to ASD diagnosed people taking it to help calm their anxiety and help them sleep. Their families note the difference and the difference it makes to their lives. There are health benefits to CBD which are clinically shown but not researched in gold standard randomised medical trials; not everything naturally beneficial has to be medically approved... is sunlight approved? CBD low does high quality is not mild altering and should be a product that people have the right to chose for themselves without the personal (sorry professional opinion which would be easily swayed towards a pharmaceutical drug) of a pharmacist or medical doctor.

It should be at an available and accessable price. pharmaceutical drugs are not safe and come with HUGE side effective and long term damage as well as easily patented... pharmaceutical drugs should be more expensive. Anything that can be patented in healthcare re drugs should be more expensive and harder to get!

find quality responsible providers who will not use GMO or glycophosphate... otherwise there is no point of the CBD oil.

I would use CBD in a safe way and read the label and warnings.

I used CBD oil in the UK where it is legal and widely available. My Auntie has very bad arthritis and she recommended me to try it. It immediately relived my hip pain for bursitis and improved my sleep quality, which had been compromised by pain. When I came back to Australia, I was prescribed Valium and Indocid to gain the same effect - both of which have serious and long-term side effects. It would be much better for me if I could simply purchase CBD oil from a health food store, or Chemist, like I did in the UK.

Lower prices are obviously better ! For people who have a lot of health problems, or something crippling like serious arthritis, they can't work, or work much, so cheaper prices would be far better for people without much money.

In the UK you can buy CBD oil from places like Holland and Barrett (a health food chain) which have been tested and which have the strength on them, so you can pick the dosage that works for you. Ideally, I would like to see CBD oil available from places like Health food stores, Chemist Warehouse and Terry Whites etc, in a range of strengths and forms. It can have quite a strong flavour, so its good to be able to buy it in capsules as well as oil extracts.

It would allow for the individual who knows their body and their pain better than anyone to have some control over the management of their health issues. Big Pharma and Governments do not have the patients interests as their priority, they are motivated by money and power to control.

CBD is not a drug, it is a plant based resource, much like food that has proven benefits.

Descr

Public should be able to purchase over the counter from a chemist, supermarket, health worker ect., much like you can purchase panadol.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I haven't used it personally but have heard from others that it's beneficial for stress and anxiety. Due to these I often also suffer insomnia, and IBS and some arthritis pain and it seems that CBD may be able to assist with these and improve my mental and physical wellbeing

I would prefer lower prices provided quality and efficacy are good as I am on a low-mid income.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have personally used it for anxiety related disorder and IBS. My mother used it successfully for pain relief after surgery when she was unable to use the pharmaceutical pain relief due to allergies.

Lower prices make it more accessible to a broad demographic, particularly those people who live on the poverty line and need it the most.

I believe that these decisions around plant medicine in particular should be left to health practitioners in this field (ie: people who actually work with plant medicines) and up to the individual who needs it.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer debilitating migraines that leave me bedridden when they strike. For several years, my GP prescribed me tramadol, but when I discovered it was addictive, I quit it and began search for alternative means to aid in pain relief. CBD oil has proven itself a life changer. It helps prevent the pain before it starts and lessens the duration of all migraine symptoms.

DeserLower prices allow all Australians to benefit.

Behind the counter and online with ID approval.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I haven't tried CBD but think it would be beneficial for me and loved ones with anxiety and stress issues

DescrObviously the lower the price the more accessible CBD will be to all Australians

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I haven't used it personally, but I know people who have and it helps them enormously. We all need freedom to make our own choices. We need to move away from the desperately damaging drugs.

DescrHigh prices puts it out of reach for those who often desperately need it. However, quality needs to be upheld.

It should be available from the growers, from health professionals, from pharmacists, from recognised suppliers. But since you allow drugs to be sold online, from unregulated individuals, then why not do the same with CBD? It's a whole lot safer and a great deal more helpful.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

My daughter uses it for anxiety with great results.

I have visited hemp farms in America. The costs of setting up the plant is quite expensive. But they produce good quality Oil with low THC. Because the hemp grows as a weed and is easy maintenance. I think that it can be sold at a reasonable price. As there are many health benefits for this plant. As people are using it in America for many different medical conditions. With very few side effects.

I hope that we have some creative minds within the TGA.

I would use CBD in a safe way and read the label and warnings.

I haven't had the chance to use CBD as I am a pensioner & haven't been able to afford it.

I have a large scoliosis spine. (much pain).

I sincerely believe that I would like to be able to at least TRY the CBD, as I believe that it COULD be beneficial.

I have tried other types of oils - say like Olive Oil, which have helped, but I sincerely believe that CBD could be MORE beneficial from what I have been studying. Thank you.

A lower price would be more helpful for a pensioner. And it would help with the general population who could benefit from it being more readily available.

Please help to make it more readily available.

Only publish my submission on the TGA website with confidential information redacted. Publish all EXCEPT my name address and phone number, pls.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am a qualified and registered herbalist with 29 years in clinical practice. I have a number of patients who have purchased CBD on their own, for various health conditions and most report positive benefits. There is now much information available to the public and people are doing their own research, then inquiring with natural health professionals they already trust. I don't feel that a pharmacist nor a GP are necessarily the only health professionals, that should be able to advise the public about CBD and its benefits.

DescrAt the moment it can be purchased but we aren't sure what the quality is and the price is high. Making it available for all Australians should help to improve quality and price and I feel this would be an asset to the health of the Australian public.

Many Australians consult natural therapists, who are well trained and qualified in a huge range of health and wellbeing support. As this takes a great deal of load off the orthodox medical and hospital system, I feel it would be relevant, if CBD was more readily available in Australia, for health professionals such as naturopaths, herbalists, acupuncturists, osteopaths etc. to recommend it to their clients where they see it fits with conditions that CBD is known to be useful. This could also allow for more research and clinical data to be accumulated.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Haven't used cbd before but have done a solid amount of research on it and would love to try the benefit factors of it, only thing I wouldn't like is the sleepiness

DescrI think it all Australians could afford it then people would use cbd as a go to remedy instead of consuming lots of pills to get same results. Not quite sure if you can build a tolerance to cbd but people definitely build a tolerance towards pain relief drugs like morphine and are highly addictive

Chemist

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The (c) hybrid option would make it viable, legal and easier to purchase in attempts to provide any form of relief from my ongoing chronic pain sufferance which could lead to improved quality of life and mobility. (off the record) I have managed to try cbd oil with a limited amount of relief from chronic pain but would benefit more if the strength was tested and labelled in accordance with guidelines and made readily available without prescription.

We live at a time where most natural/herbal remedies are being "lobbied" out of existence and even outlawed by govt, due to big pharmaceutical corporations paying for this in an effort to generate even more wealth over health.

DescrI think lower priced and readily available would make it accessible to myself and lower income households as it would provide a safe and cost effective way of treatment with little to no side effects as noted with conventional medicines.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Consumer

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have known people who have had life changing results from using unprescribed cbd oil. The medical profession could no longer help them with their health conditions

Describe I believe if the price is offered too high people will try to obtain or grow their own. It will not affect me at present but it should be available to everyone that needs it.

Legalise it for medicinal purposes and we wont be wasting police and court times

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

I have a large number of allergies and intolerances to pain medication, such as opioids and nsoids. I live with daily chronic pain as well as acute episodes as a result of a genetic disorder, Ehlers-Danlos Syndrome. I feel CBD may give me another option.

DescrIt needs to be affordable so people from all financial class can access it. Quite often those living with chronic pain, illness or disability are unable to work and this means affording expensive medicines is difficult.

I think CBD should be only accessed from a pharmacist, a fully qualified naturopath or herbalist accredited by ANTA or ATMS.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I would like to see it available to people who are suffering and have not been able to find relief. It would benefit a lot of people

I think CBD should be available to everyone, not just the affluent that will be able to afford expensive products. Low socio-economic demographics suffer from many health concerns, including anxiety and pain, and it should be within their availability.

I think only under consultation from a healthcare professional ie. pharmacist or herbalist, so that it is only used when appropriate

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Date: Thursday, 21 May 2020 1:38:19 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

a friend who lives with chronic pain uses cbd oils on a regular basis and swears that it is the only substance available that has kept him from being totally addicted to opioids.

Descrthank goodness i havent yet needed to be involved with pricing

we need register manufacturers of product in Australia to create a competitive market.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

thomas goodman

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

No have not used CBD though would definitely try it if it was available

DescrPrice is always important- not everyone has an endless supply of cash. Some people have low incomes but should not be locked out due to available income.

Made available by doctors prescriptions & also from pharmacies where available

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a bone dysplasia which has arthritis like effects on all joints resulting in pain, often poor sleep and fatigue. I have used marijuana for many years, and it greatly improves my quality of life, reducing pain and helping me function despite feeling fatigued. I have had to risk being arrested and becoming a criminal, just so I can live a quality life. There is little to no research about my condition and of course no research about if CBD works. Except my experience speaks volumes of its effectiveness. But if supply was limited to only those conditions proved to be effective, many people like me would continue to miss out on the legal option. If CBD oil was easily available, at a reasonable cost I would use it instead.

Descr

I would use CBD in a safe way and read the label and warnings.

I have heard of others trying CBD for various sufferings, and most of their experience supports its use. For some however, I have been told there has been little to no effect.

DescrHaving lower prices for CBD would benefit me since I am currently experiencing chronic daily headaches as well as other side effects from having two craniotomy tumour resections and am therefore on a disability pension.

The public should be able to access it through naturopathic practices, pharmacies and through online specialty stores.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used CBD but I believe safe distribution will allow greater ability to determine its overall benefit, therefore helping our knowledge base. I would be interested in trying myself to assist with sleep

I am lucky to be able to afford a higher cost product, however I believe that access is important to determine its true efficacy. However, Quality and safety should not be compromised for price.

Hybrid model seems effective. This is a 'rip the bandage off' scenario where we can truly only determine effectiveness if the product is legally available. It's not dangerous if safely sourced and if marketable then we can control the quality, reducing risk. Get it out there! Remove the hype and curiosity and soon this product will be like any other supplement.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have chronic pain and sleep issues and have heard of many people having great results with CBD oil. It is very safe to use and does not have THC so poses no real risk or issues to the general public who would be using it to help treat common health problems. Research has been showing it is very safe and effective.

DescrObviously a lower price means I could afford to purchase it over the long term as needed to help with a chronic pain issue. If it is really expensive and only available through pharmacies then it will become too hard for many to use it. That would be very unfair as other countries have kept it accessible and fairly cheap and easy to obtain so that people can treat their conditions using a safe and effective method. The current limited access by doctor prescription is very expensive and prevents people from CBD's many therapeutic benefits.

Best way to manage quality is to keep it organic and pure so it retains the complete array of therapeutic ingredients - so monitoring the farms and the manufacturing are at a good standard. The public should be able to buy it from health food shops, pharmacies and natural health providers.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

If available, I would like myself or my loved ones to try CBD for mild pain, stress.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I have had pain management problems due to a serious car accident injury. A pharmacist spoke to me about his belief the CBD oil would work well for me due to my inability to take traditional pain medication treatments (causes gastric problems). He said he had patients successfully using it and it worked very well for them. However he told me it was \$300 for a prescription, and about \$300 to purchase the treatment which lasted for a month. That was not affordable for me. I also have a friend in the UK successfully using the CBD medication to treat her hashimotos and thyroid disease and associated autoimmune condition/pain levels.

Higher prices prevent me from affording and accessing the treatment. It needs to be reasonable pricing but of good enough quality to treat pain and illnesses.

I think through a pharmacy, chemist or naturopathic health provider consultation.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Living in the US the past few years I've seen friends with long term illness use CBD and live a better quality of life. I've seen friends who lived with chronic pain for years no longer need there opioid medication.

Personally I've used CBD to treat anxiety and find I sleep better. I've never experienced any negative effects.

Identifying a correct price point is important. However once people experience the broad and positive effects the price won't be such an issue.

CBD should be accessed via e-commerce, health food stores and any retail supplement outlet.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

CBD will impact me in a positive way to improve my overall mental health and well being. I have used CBD without pharmacists advice. My experience was exceptional and I felt like i had my life back under control. I only took it until I felt I no longer needed it and have been able to keep things in check ever since. It was a life saver.

DescrI think lower prices for CBD is important for all Australians. If the price is too high it will discriminate against the lower income households who may need it just as much as the higher end income earners.

The best way for the public to access CBD, i believe would be the private proposal but add to it that it would be mandatory to report the effects to TGA.

TGA would have greater evidence on varying scales to create a plan on future advancements with CBD.

Only publish my submission on the TGA website with confidential information redacted. Do not publish my Name and Phone number

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

have not used personally but want to try for relatives with chronic fatigue syndrome 30 years duration for pain sleep disorders etc. Know others who use for pain responsibly and without problems. Would like to be able to try at a reasonable cost and knowledge of manufacturing purity and safety.

DescrAccess should not depend on whether one is wealthy. Important to keep price low to encourage safe use of proven products rather than street bought cannabis of dubious quality.

Could be through health food stores, pharmacists (as long as not too expensive) or special government access freely available to all.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Date: Thursday, 21 May 2020 1:37:45 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The proposed change could impact me and a very close friend who is living with a terminal illness and getting on with it as best he can. He is currently using CBD oil to help with broken and reduced sleep patterns. I would be interested to try CBD oil to help with management of work anxiety which impacts my sleep patterns. Freely available CBD oil would make access so much easier for many people living with pain and discomfort.

DescrThe price of CBD oil is very important so that every Australian has equal access. Not only wealthy people get sick!

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used it when on Holiday overseas where it was legal. 1 drop a morning in a glass of water made a huge difference. Ankle pain I had carried for over 12 months disappeared. A sore shoulder injured at work - disappeared. Bowel movements regular and anxiety non-existent. It is a disgrace that people should not have access to this. By the way I do not drink alcohol - nearly 30 years, I do not smoke and I may take no more than 9 panadol a year - I take no drug - except coffee. Instead of protecting the interests of Big Pharma the Govt should be looking at providing quality health supplements for the population of Australia.

Describe I would by quality CBD because I know it works.

Are we the nanny state. If the Govt and TGA are so concerned about the abuse of drugs and the danger to the citizens then ban alcohol and ban tobacco products.. Also ban the products of food products with e102 - scientifically proven to have links to hyperactivity and banned in a number of countries overseas. The TGA is just an inefficient instrument that the Govt can hold up to justify its position regarding certain products. Get serious for the people or get a conscience, forfeit your salary and resign.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD obtained from overseas, it was very effective at helping my chronic pain without any side effects and eased my anxiety. Unfortunately the cost to obtain is too high. I also have a spouse with PTSD from military service and his coping abilities dramatically changed with a trial of CBD. I strongly feel Australians should have a choice and be able to access high quality CBD.

DescrLower prices, would hopefully mean we could afford to utilise CBD and acheive a better quality of health.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have Crohn's disease and my family has a lot of autoimmune conditions. I would like to try CBD oil for help with mild pain and sleep issues, my father has chronic pain that he suffers with due to bone on bone in his knees and a condition where his wrist tendons are 'dissolving'. I would like him to be able to try CBD oil to see if it makes his pain level more comfortable, he cannot take painkillers as he is already on immunosuppressant medication. I have experienced severe insomnia with hormonal changes as I approach the end of my child bearing years. I would like to try a natural plant compound like CBD to help me with this.

I believe we should have access to low cost CBD oil, so that is accessible for all Australians. The cost and difficulty of accessing medical CBD is prohibitive for most.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Thursday, 21 May 2020 1:37:06 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I feel the ability to try what many others have claimed to work for them in such a natural form is worth trying for myself and family members who have soon. we had the issues listed above. I have tried 1 for sleeping and being a shift worker i was finding it difficult to get into a regular sleep pattern and it did help but unsure of exact dose so would be better off was known so i could know how much to really take for better effectiveness than just experimenting.

DescribeIt is important to be able to access quality medicines at a low price. Many of the people who need alternatives to pharmaceuticals don't earn enough money so are just reliant on pharmaceuticals as they are subsidized by the govt. This causes them to be on medications that often have many possible side effects also.

I feel that it is good that it's available through health food shops and other suppliers and maybe a practitioner only one through drs or naturopaths for higher doses so results can also be more monitored going forward.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have known friends that have used CBD and have had the most amazing results.

I would only use an extremely low dose as I don't have any known problems (yet) and would use it as a preventive. My dad died from Bowel cancer so would think of using it. It does need to be cheap. Being ill puts too much stress on people and their families. Money problems should not add to that.

I believe Australia should lead the way on this. We are the lucky country and have the skills. The farming of it should be encouraged.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I have had terminally ill friends and family who have since passed and at those times CBD may have been an option for any mild symptoms. I hope this would be a stepping stone to a more open approach to the development of medications.

I believe all products should be certified by purity and priced accordingly. The value should directly reflect the quantity of the active ingredient.

CBD should be made accessible however only if the TGA inspects randomly to test the quality of products being sold to ensure the labelling is true.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I have friends who have successfully used it for pain management and sleep issues.

DescrIf it’s natural, it’s better than taking chemical drugs.

It should be available with guidance, say through a pharmacy.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

There are so many wonderful reports about the benefits of CBD. Family and friends have reported exceptional results in managing side effects from pharmaceuticals using CBD. It is absurd that people who wish to have access to CBD become 'criminals' for simply wishing to improve their wellbeing and quality of life. Further, there is international precedent demonstrating the positive impact of wide access to CBD- the Australian Government has a responsibility to the Australian public to follow suit rather than forcing people to turn to the black market to purchase CBD products. Australia is well positioned to become a world leader in CBD research, farming, manufacturing etc and given the current economic climate, this is an excellent opportunity to leverage our position.

DescrPricing for CBD as it stands in Australia is absurd- people who are able to legitimately access CBD through their doctor are continuing to seek international supply due to the exorbitant cost associated with procuring CBD through the approved channels. This of course comes with its own risks in terms of the quality and safety of international products. The extreme cost in Australia is a direct result of the regulatory burden placed on industry due to the current policies. Access to CBD must be low cost in order to protect low income earners. Why should supporting your wellbeing come with a hefty price tag?

The TGA's most important mandate is to protect the health and safety of Australian medicine consumers. Broad access to CBD products must be a priority to the government and specifically the TGA to reduce the need for the Australian population to continue accessing products from international markets where product quality and safety are questionable- this will ultimately protect the health and safety of Australians.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I personally have not tried any Cannabinoidoil previously. I would like the right to have access to it freely. I dont take any strong prescription drugs although they are freely availble through a GP, many are addictive and seriously harmful. I do not understand why these addictive drugs are authorised by the TGA and NOT a natural product derived from Cannabis which has less side effects. If my son had access to Cannabinoidoil and not dangerous prescription drugs he may still be alive today.

I have done some research and know of friends who have proven it beneficial.

DescrCBD should be available at low cost, as a choice. People often choose dangerous prescription drugs because they are readily available, especially for those aged and on disability pensions.

I think CBD should be available from pharmacist stores and Health Food stores. Also Natural Therapists and Health Carers

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I believe the use of CBD is a valuable therapeutic in many conditions and should be allowed to be used by the public. Yes safety controls are needed and guidance from a qualified practitioner are also needed but limiting access to a proven therapeutic it's wrong when it could be used to improve people's health and well being particularly those that suffer with cancer and neurological diseases..

DescrThe price matters of course since if the price is high access to it will be limited to the people from a certain socio economic group only. That is not fair to the other people needing it.

I believe you should allow access to people to purchase it.

Acquaintances mostly overseas) have reported positive outcomes improving sleep and stress, noting improvements to quality of life with no reported negative effects other than cost and procurement. From my perspective, I would be interested in CBD as a treatment option for these issues in addition to persistent pain due to an ACL injury in the past.

DescrIt is possible that I could be priced out of the market, but depending on benefits, high cost might be worth making other sacrifices for.

I have had positive experiences communicating with pharmacists in the past for nicotine cessation. I feel that appropriately trained pharmacists or pharmacy assistants could be safe and effective distribution channels.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I think CBD should be available so I can try it's effectiveness in aiding anxiety suffered by myself and my 2 teenage boys. I also suffer sleep issues so would love to see if this could help. Other natural remedies have not been successful for me and taking drugs long term is not something I am prepared to do due to their side effects.

I believe lower pricing is extremely important! Every person has a right to good health and I believe many low income people overlook natural healthy lifestyle options because of the cost. Cheap food and subsidised drugs are all they can afford. Also, in my case I would be potentially buying for 3 people if I found it effective. That would not be easy to maintain if the price was high.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I already use CBD to manage migraine. It has been incredibly effective and has allowed me to regain quality of life. However, the current cost is very high and puts a financial strain on me.

DescrLower prices would make it more likely I could continue to use CBD to manage chronic pain.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My mother in law is using it for terrible pain in her feet. This is doctor approved. However the quality is varying and is not working so well now. My sister suffers terrible kidney pain through a defect. I feel both people would be in a lot of a better place in life as the medications they use such a high doses of tramadol and it's side effects long term is causing other medical conditions and dependence. My husband also has suffered terrible mental illness with anxiety - Panic Disorder. . Something like CBD instead of anti psychotics that has caused Parkinson symptoms of shakes would also be a far better option with way less long term effects.

DescrI think quality does usually me strict regulations with processing and can affect price. I do know that people that need this type of access of CBD for medical treatment should be available to everyone with regulations though too. Higher price would make it hard for us to sustain to purchasing it long term. Medicare helps with some scripts and health care care card helps reduce cost. Price sometimes I feel reflects the quality and regulation control. Too cheap shows little regulations.

I still the doctor control review is good. But I also think if there's little regulation you will have bad quality that may cause terrible health problems too.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would be able to improve my life with some pain relief better sleep at an affordable price ! I would prefer to have permission to do so without having to see a doctor every time I need a refill !

I do not have an income and like so many Australians needing pain relief etc I would prefer a cheaper option to opioids!

If we can not supply our own I would want this to be readily available at a designated spot such as chemist to ensure ease of access

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I have suffered back pain for nearly forty years after a fall from a horse and discovered spinal abnormalities I never knew I had. My pain is constant and 24/7 and I do not want to use drugs with side effects on a permanent basis. CBD should be available at low cost to anyone if the health profession is really about health, well-being and quality of life.

Price is everything, it can mean CBD is available to everyone and not just those who can afford it. Everyone has the right to live their best pain free life and price should not deny someone of doing that.

CBD I believe should be sold through pharmacies/health shops and the like to provide open access for everyone.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

It is available widely and used safely in many parts of the world already. We are missing out on the huge benefits of this natural remedy on many health conditions. It has the potential to improve the quality of life of many people. through reduced stress, anxiety and pain. It needs to be available at low cost and high quality, and individuals need the flexibility to be able to work out a sensible dose that works for them.

DescrThe price is very important. It needs to be affordable to any person who could benefit from it. High pricing would discriminate against those on lower incomes, or income support, such as a disability pension.

I would be happy to see CBD sold in pharmacies and health food stores, like supplements are currently.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The proposed changes will impact me by supporting my constitutional right that I have sovereign choice over my own health, and that the choice and free will of those I love is protected. I have loved ones who used CBD to great relief of their anxiety, pain and discomfort from autoimmune disease, neuropathy and high anxiety. The additional mental stress caused by, either: difficulty acquiring CBD when needed, or feeling like they were making an illegal act, is unnecessary and only increases ill-health when we should be focused on wellbeing. In the case of my loved ones having used CBD, their symptoms were greatly relieved and mental wellbeing restored to give them the space to make responsive choices for their lives, rather than reactive, pain-induced choices.

There is so much evidence now that CBD supports human health and wellbeing, that it should be freely and easily available to all who want or need to use it.

Something that ultimately facilitates good health outcomes must be easy for all people to access. As a community and as a healthcare system we should be focused on what we're trying to create, not prevent what we don't want.

DescrCBD is easily grown and produced, and should be easily available to all Australians. It should not be priced to exclude those on low incomes. Good health is the right of every Australian and no one should ever feel left out. For this reason CBD should be priced as cheaply as possible, and for the price to be somehow regulated to ensure no-one profits unfairly or takes advantage of people.

I would like to see CBD widely available through any health care provider registered with their discipline's governing body in Australia, or internationally, including naturopaths, and any provider who works with people in physical or mental distress.

Only publish my submission on the TGA website, do not publish my name

I would use CBD in a safe way and read the label and warnings.

I use it to lessen my anxiety and depression. I am having good results with the frequency, duration and severity of both conditions affecting me far less.

I pay \$260 for a small bottle at the moment. I'm a single mum who struggles to pay that high of a price for it but it works for me so I scrimp and save to be healthier for my children. If it cost less it would be far better for my budget.

I think it would be good to be sold at a chemist (without prescription) so there is a professional who you can talk to about it to make an informed decision.

I would also like to see it accessible and accepted as I don't like having to buy it online the black market'.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have had friends give me CBD oil for sleep deprivation, working night shift for many years made it hard to return to a normal sleeping cycle. CBD oil helped me return to a normal cycle without the acid reflux I get from sleeping tablets.

DescrI have epilepsy, I am currently paying, per month, \$395.00 per 30ml dose for my cannabidiol oil. It is too expensive!! CBD oil helps me in a range of way's, from anxiety to sleeping, eating and my epilepsy.

After my first epileptic seizure, I went through 4 different medications for my epilepsy and they all made me physically ill twice a day. CBD oil has been my only medication for the last 4 years. If we could buy CBD oil from the corner shop, like cigarettes, in the same sort of dosage increments like cigarettes, it would then regulate dosage.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The proposed changes will give an additional treatment towards managing many diseases as already evidenced through world-wide studies. More options for people and an option that may prove more effective than anything attempted in the past. It also has great health benefits for regular people. Since it is derived or based off cannabis, it can bring more natural therapies and treatments into the spotlight for research. So many commonly used medicines have started off from nature and improved upon.

DescrIt should be low but not too low. Low enough that people aren't going to opt for an illegal method of attainment, but enough that it is able to be taxed. The tax will be reinvested for society, perhaps most fittingly towards healthcare and health research.

I think that CBD should be sold in pharmacies and supermarkets. No age limit but quantity limits per person. Warnings, list of common uses and links to resources for more information should be on and inside the box.

Only publish my submission on the TGA website with confidential information redacted. Just not my name :) however you can state that I am a student nurse, nearly a Registered Nurse who has had an interest in the field, researched into the topic just like I would be expected any other medication when delivering health care to patients.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a law abiding citizen I have not tried CBD but I have heard of the many health benefits and believe it should be available here as it is in many states of America now.

I think a lower more affordable price will give myself and other Australians access to CBD to help improve wellbeing. It would be terrible if a high price puts CBD out of the reach of those who could really benefit from using it.

Health food shops and pharmacies would be good places to purchase CBD.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My husband has PTSD and will not take psychotropics due to their side effects, and I know of military veterans who use CBD oil successfully for their mental health. He also has constant moderate back pain due to 3 bulging discs, and he avoids pharmaceutical pain relief due to addictive qualities and adverse side effects (eg NSAIDs on the gut and paracetamol on emotions and the liver). I have constant irritable bowel syndrome. CBD oil has so many benefits for health and is used very successfully overseas. I think it is long overdue that we get access to such a beneficial herbal medicine.

DescrWe are on s strict budget, so obviously it is important for CBD oil to be readily available and affordable. We have the perfect opportunity for a thriving industry in Australia with inexpensive herbal medicine.

It needs to be freely available.

Making CBD oil accessible and affordable for use by the majority of the population for general health and well-being will help relieve stress and anxiety as well as provide a general pain killer at an affordable price. That alone should help thousands of people deal with the added stresses that we are dealing with these days.

DescrAffordability for all Australians would make CBD oil easily accessible if it was sold in general stores / supermarkets.

If the prices were high most people wouldn't be able to afford it.

I believe public access through supermarkets at an affordable price would be the optimal way to distribute a pure 100% plant derived CBD oil. Synthetic versions would be detrimental.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD in the past for pain associated with pre menstrual symptoms with full relief only after 4 weeks of taking a low dose. It also cured my low level anxiety. I consulted a Naturopath online. The product was posted to me from OS. It was important to me that it was from a legal country with all the quality regulations, as well as following my values of organic, whole plant, independently lab tested, mould, pesticide and GMO free. I followed a Start-Up protocol (over 2 weeks) to find the best dose for me, which ended up being a half dose of the recommended amount. Since then I have micro dosed for the same relief. And since micro-dosing, I no longer need to take it at all. Please look into Dr Dustin Sulak in Maine, USA as a reference for your research. He will save you loads of time. I will happily switch to an Australian brand if it follows my values, is price competitive and hopefully water based (better absorbed) which I cannot source as yet.

I would hope that a 500mg CBD oil that is whole plant, organic, GMO, pesticide and mould free with independent lab testing results available would be no more than \$AU100 for 30mls.

I know people who did not seek advice on how to start taking or how much to take or what strength. They experienced unsettled stomachs because their dose was either too much or too quickly. A start up protocol is so important. A less is more approach must be understood and individual dose requirements must be respected. A one-size-fits-all approach does not work here.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

Modern pain management has a lot of unwanted side effects on the human body. examples being constipation from overuse of opioid based pain management.

I have used CBD for pain control in the past two years after a spinal injury and was not comfortable continuously using Tramadol / Oxycodone to control the pain

DescrIf the price is too high some people on limited income may be unable to acquire the CBD safely and may turn to alternative (street) sources for cheaper and less safer / cleaner oils.

The best way for CBD to be available to the general public is through a proper dispensary similar to other countries where Cannabis & it's derivatives can be purchased OTC with the option of discussions with dispensary techs about the proper dosages (Similar to pharmacy techs but with a focus on CBD use)

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Have had cannabis vapor, which stops the chronic pain.

DescrIt must be affordable for pensioners ad the elderly.

Only publish my submission on the TGA website with confidential information redacted. contact information like Email

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not tried CBD but would like to as I think it would help in my anxiety, fibromyalgia, pain, headaches & insomnia

DescrI think low prices would not discriminate who needs CBD & is fairer for all

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have seen many friends at university turn to street cannabis for conditions such as anxiety, sleep and pain and seeing the impact the THC component has on their day to day function - its really important for me to be able to access high quality CBD products over the counter.

Describe the price of CBD products is extremely important. If the price is still relatively high (such as the moment - \$350 per month), people will be more inclined to self medicate with street cannabis. Considering opiates are PBS, price does play a role and although the cost of an opiate script is like \$6, the negative externalities from these types of drugs make them much more expensive to society .

Over the counter - with advice from pharmacist on dose requirements and warnings on label regarding driving etc.

I would use CBD in a safe way and read the label and warnings.

I suffer from chronic fatigue with related anxiety and depression. I have been trying to access cannabidiol to help reduce anxiety levels and improve sleep quality. However as it remains illegal to import or buy CBD over the counter or from an online pharmacy I cannot see if the health benefits of stopping the usage of other drugs. I currently take diazepam and clonidine both have serious side effects CBD does not. It would be a big move to make CBD available for people however I think the policy is not broad enough in scope. Option c is the best choice but does not go far enough.

CBD should be cheap as it is a hardy plant and grows well in our environment. Anyone saying we cannot have access to cheap CBD is probably benefiting from high prices.

Make of cannabis a viable crop we can use to extract CBD. This is not something that needs to be precisely made in a lab. Most people have been making CBD oils using their own home recipes including tinctures and other extraction methods.

I would use CBD in a safe way and read the label and warnings.

I have been purchasing cbd oil from the internet. I have no idea of the dose I am taking except by personal experimentation. It costs a lot. It works as it reduces my worry and anxiety. It took away worries that were interfering with my daily work. I want to take it safely daily. I functioned normally otherwise. Didn't feel high or any other effects. Just noticed significant less anxiety.

DescrYes. The price is extremely important. Health care is costly. And such a great natural product should be easily available, accessible and within reality of the price of its growth and extraction.

Chemist with warnings is a great idea. As it allows it to be monitored.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I've been in chronic pain my whole adult life - over 30 years. I have been diagnosed with fibromyalgia, chronic fatigue syndrome and multiple chemical sensitivity. There are no long term treatments safe to take. I've done everything I can with well-being and dietary measures. I've managed to go from bed bound to functional but my pain is debilitating. I would just like to see if it makes a difference. I am a Carer, I will probably never work again due to my child's needs, I would like the opportunity to live a more comfortable life with some choices to alleviate my pain cheaply that I don't currently have.

The price is very important. I have very little left over after using 70% of my income on rent. I have a child with disability to support. I would only try something like this if it wasn't taking food out of my daughter's mouth and was sustainably priced to keep taking if I gave up small pleasures like coffee and the occasional take away.

I'd like to be able to buy it in a safe space like a pharmacy or supermarket. I think pharmacies are great because you can ask for informed advice and if there's studies in the future they'll know about them. But as it's safe it should also be available in places like supermarkets because you probably only need advice the first time you take it and it's probably on the box anyway.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil from America with zero side effects. I felt good, good sleep, better energy levels, I have not experienced ill health for many years. My weight is well balanced. I have not needed to use pharmaceutical prescription drugs for over ten years. I have independently researched this medicine for many years now and I feel very passionate that it should be available for all Australians at a low cost and easy access because I have worked in the health industry as a Nurse (almost every field of nursing) and a support worker for 10 years. I work in palliative oncology for 5 years. I have personally worked closely with clients and family that I believe would significantly benefit from this non-invasive medical intervention. I have talked to these people that suffer daily from health conditions and disabilities and invasive procedures and most of my clients and their family are pro CBD but don't use it due to not being able to access it and fear of stigma due to current laws and not being able to talk to their GP about it. Many families have told me they are desperate to find ways to help their loved ones and have been tempted to try it. I am passionate about the availability of this medicine. And please urge it be available for those suffering from a wide range of issues.

I believe this medicine should be at low cost so it can be accessed by people of all socio-economic groups many of who are swamped with medical bills or simply the cost of living. I believe that a low price is still a great economic move for Australians as I believe people will have a life-long relationship with this medicine and the benefits will encourage them and me to continue investing in the product.

I strongly believe it should be easily accessible for all Australians simple as that. I think we should eradicate its stigma and allow GPs to talk to their clients about the use of this medicine and any adverse effects or contra-indications with other medications. I have seen good people suffer too long without this medicine on the market. Please act now to make this product available. It is in the best interest of many

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I have seen evidence of significant pain relief offered by CBD oil for chronic pain conditions including Rheumatoid arthritis and debilitating migraines. There are no real cures for these people experiencing this chronic pain through conventional medicine. CBD oil offers significant pain relief and therefore significantly improves quality of life. CBD oil should only be used as dosed medicine for medical conditions known to benefit from the use of CBD oil.

I want beneficial medicine available at an affordable rate to all Australians to prevent suffering.

CBD oil should be accessed by Australians through pharmacies and dispensaries.

Only publish my name and work title on the TGA website, do not publish my submission.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

have used CBD for general health, have not noticed any side affects at all, Strong sense that overall health is improved when using CBD oil, but its difficult to get and expensive to source and I cannot be certain of quality of oil that was sourced. I have considered making it myself to ensure quality, but the quantity of source material required to make oil makes its expensive and illegal. Being able to access an CBD oil that is made to a high standard would relieve the anxiety of trying to source it by other means.

Descript should be available at a price that makes it affordable for all people. Ive heard of prices ranging from \$150 to \$700 for 50ml - which is outrageous and with no guarantee you are getting CBD oil. This needs to be something you can get from the chemist and for about the same prices as other health supplements.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild anxiety, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

To date I have not used CBD for myself or my family, but I have done extensive research on the information that is currently available on its efficacy to be used for mild ailments both mentally and physically. I believe that having the CBD as a healthcare option, will enable myself and my family to be given the opportunity to utilise a natural alternative that is safe and effective for when it may be required.

The most important question about dose is its effectiveness, the dose needs to reflect the clinical efficacy of achieving the healthcare outcomes. The lower dose may prove to be ineffectual and therefore not worth engaging with. Having the right potency of dose ensures that it will have the desired outcome. As an option for healthcare, it is only fair and equitable that it is made available at a low cost, to ensure that all Australians are given the chance to purchase this product if they wish.

Personally I would like to see the CBD oil made available to the public through chemists and health shops, where there is the option of a pharmacist or a complimentary practitioner available to answer any questions regarding CBD's use or risks.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have heard very positive stories from people who have used CBD. We were given some to try on my husband following an injury he incurred to his back (without a pharmacist's advice). In our experience it was very effective, and brought relief quickly

I think it's important that people who need CBD have access to it as soon as possible.

DescrLower prices would certainly enable more Australians to access it, which in turn would have a positive effect on more people's well being.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I've used it for my Great Danes osteosarcoma a most painful condition i talked about it with the prof oncology treating my beloved furry family member , while the vet could not recommend its use due to law they were aware other clients were sourcing it i read all about it, research overseas etc to determine if it was suitable. Im glad i found some and gave it to my dane during his chemo etc..... i wouldn't hesitate to recommend usage to family members etc i have a sister with MS , mother with Crohn's and severe back pain / and more my elderly uncle in UK accessed it for chronic health issues way back in 2000 at the time we were very surprised (my father- his brother , myself , my mother) but it worked for him and thats all that matters..... as i come from aviation industry i would want to make sure any of my colleagues in flight were not using any THC component !! I believe there is a great need for SAFE cannabis oil availability now, not in x number of years time. I also have zero trust , respect for the TGA having had previous dealings with them and read reports etc about their decisions.

DescrVery dependant of cost as to whether its accessible for majority.... And isnt that the point accessibility for most Australians should they wish .

Only publish my submission on the TGA website with confidential information redacted. Industry i work in ...and personal information.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I have never used CBD, but I am thinking of trialling it for inflammation of my knee. I have been told that CBD in a cream form rubbed in topically helps with inflammation and I would like to try this.

The price is important as CBD has many and varied uses to help with a myriad of health issues. All Australians need to have access to this.

Like many other medications CBD should be accessible in pharmacies but without a prescription, but with a record made of individuals who purchase it and the dosage bought. That way we have a record of who purchases this and the reason for the purchase. This would be a great way to keep ongoing data about its use and effectiveness.

I believe that the availability of medical cbd oil would affect me in a huge and positive way as my wife is a sufferer of PTSD and BPD and it has had serious positive effects for her in the past with no nasty side effects as all other prescribed medications have had with her.

The price of CBD is important as it needs to be available for everyone that needs it not just those who can afford it but those who need it.

I think the best way for the public to be able to access CBD would be an over the counter pharmacy only medication

I would use CBD in a safe way and read the label and warnings.

I am suspected of having Autoimmune Arthritis and Fibromyalgia a friend gave me some CBD oil to try and I was able to sleep properly for the first time in a long time I felt less stressed, was able to think clearly and was better able to cope with the pain. I believe everyone should have this opinion available to them.

DescrI am a pensioner lower pricing would mean I could afford it. To high and as always only people on a good wage can afford it which isn't fair and will only encourage black market products that may not be pure and could potentially be dangerous.

Cannabis is a herb that our bodies love and can adjust people to live a fuller more enjoyable life.

I as of present have not had access to natural CBD oil..... I did not know of its' availability or legality within Australia..

DescrLower prices would be advantageous for my income situation.....Many Australians with minor and major health issues are very low to low to medium income persons therefore low costed all natural CBD oil will be most beneficial for their income situation.... Additionally low costed all natural CBD oil will be a healthier alternative to mass patented, chemical depression, anxiety medications which I see as contributory to further disease conditions

Freely available...Supermarkets, all food stores, inclusive of health food stores, Essential oil stores, Complimentary medicine stores , fruit, herb and vegetable market stalls., Organic produce stores, Herbal stores..

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I am a Clinical Aromatherapist with an in depth knowledge of Essential Oils. CBD oil is high in the pain blockers and would be a valuable natural therapy to compliment chronic conditions being treated.

DescrIt would be a product that can be easily and grown in our part of Australia. Lower prices would make it more accessible to everybody.

I believe it important for any product that is considered as a therapeutic dose should be prescribed and administered by a medically trained practitioner. CBD oil is a valuable resource for pain, anxiety and insomnia related to having to live with a chronic illness though it is important to maintain a sound evidence based practice.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been learning about natural remedies for 40 years. I have known many people who have successfully used CBD safely to treat a broad range of diseases, including cancer. When you understand the truth about why CBD was outlawed, and listen to those who have used it successfully, you will understand that it is the cheapest, most effective medication available. It will save our health system \$billions.

DescrIt is cheap to produce. There is no need for it to be expensive, hence, out of reach of many people, who then rely on subsidised medications manufactured by big pharma.

It could be available through pharmacies, but they rely on their profits from big pharma drugs, so it would be a conflict of interest.

It could be available from the health food stores and health food shelf in supermarkets.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My anxiety is now managed and my wife likes me again, please understand I am not stoned but getting awesome results

DescrIt needs to be affordable for all.

Make it available in Chemists and health food shops

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer from mild to serious pain in a joint after an injury and subsequent surgery. To date, only something as strong as morphine has any effect on this pain, which is surely not a good idea for daily use.

I've tried some CBD infused gummies and have had a reasonable reduction in pain, with no ill effects.

Being able to acquire this kind of aid legally and easily would be of great benefit to my daily quality of life.

I think that lower (or reasonable) prices for CBD would make it more accessible to those who would need it.

Only publish my submission on the TGA website with confidential information redacted. Do not publish my name and contact details, or any other identifying information.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My mum has chronic fatigue as a result of severe glandular fever 25+ years ago and it is awful to see how dilapidating it is and the lack of research and therefore treatment for it. The research that is available suggests this might help her condition however it is currently so expensive that it is out of the question. She also has building discs and nerve pain in her neck from her career as a it's and this would likely help ease the pain.

DescrIt is too expensive at the moment for the average Aussie to access. My family are median earners and it is still too much.

Only publish my submission on the TGA website with confidential information redacted. Please do not publish my name or contact details

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have brought poor quality grade CBD oil for my son who has suffers anxiety and he found it did help but was mild. It was \$80.00 for 30lm just to costly. I also believe that CBD oil has been around for a hundreds of years and it has been well establish that can make a great improvement to peoples health if use in the correct manner.

DescrIt must be made cheeper so the average family can afford it. It is a plant that can be grown easy and the laws makers should make it that people that need it for health condition should be able to grow their own up to three plants.

It should be widely available from Doctors, Naturopaths, Health shops.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Consumer

WA, Australia

No. 2 - I believe CBD oil and capsule, Liquid should be made available for all that wish to use it. I also believe that the THC low levels should be able to be use via any doctor to prescribe to the people who are of ill health or pain and for all other medical conditions that they may suffer. The price should be made affordable for all. At the moment the cost of a small about is over \$300 plus dollars and that would only last for approximately one week to one month is not fair. The cost of growing making this product is not in line with the cost that we have to pay now for it.

If available, I would like myself or my loved ones to try CBD for mild anxiety, help with restful sleep, general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

Descrn/a

There needs to be a distinction between medically prescribed therapeutic dosages and "alternative" health level self-use.

Medically prescribed therapeutic medications should be supported by medical treatment options and TGA licensing and PBS support. Non-medical self-treatment for perceived ills should be priced without the support of Govt pricing schedules but with TGA licensing.

I have used CBD for mild pain and anxiety in the past. It has given me positive therapeutic effects by reducing pain levels and calming me during panic attacks.

By making CBD legal it will allow me to access it safely, without the fear of incorrect doses.

Low prices of CBD will allow more Australians to access the product who need it. Expensive prices will restrict how many Australians can access the product.

CBD pharmacies, like the stores they have in Canada. Where you have a store with a professional who can guide you on the best option for you. As well as a cannabis ID for purchase.

I would use CBD in a safe way and read the label and warnings.

I have a long history of chronic pain, anxiety and depression. If CBD oil was freely available I would have used this in preference to opioids which have been generally prescribed to me. The past and I have been extremely reticent to use due to their habit forming/addictive potential.

DescrCost especially at this time is a key determinant in how wide spread the use will be. Cheaper is better as more people will be more likely to consider this as a bible alternative to current medications.

Over the counter medication, in a pharmacy setting would be my preferred option

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil in the USA. I had mild shoulder injuries that were causing pain with movement and the CBD oil helped immensely. I was able to move freely again without pain. The additional benefit was realized when it came to sleeping.

I purchased my CBD oil from a health food shop - no dose measure, just followed the advise on the label.

DescrIf it is priced highly I cant afford to buy it. I think black-market CBD products will surge if "legal CBD" is priced too high.

It is made from a plant that grows like a weed - it should not be expensive.

CBD should be so widely available that the big 2 supermarket cahins in Australia have in stocked on their shelves.

Any where that sells panadol or nurafen should be offering CBD products.

I am prescribed CBD and THC products. I can't afford them.

The TGA and government have intentionally hamstrung access and production under the guise of maintaining poppy industry exports and UN single convention guidelines where it suits them.

Australia needs to join the 21st century, diversify its economy and legislate for easier access to adult use of cannabis products, akin to US states and Canada.

This shouldn't even be a conversation we are having, emulate our trade partners.

Cheaper CBD would mean I can actually use it. Currently it is the same or inferior products to Canada that are multiple times the price, plus extortionate doctor's appointments to let them get their piece of the pie.

The best way would be via online order or through FMCG retail outlets. As long as the products are produced in a regulated way, checking for heavy metals, mycotoxins and bacteria it should be ok. Just don't over regulate, you'll screw it up again.

Emulate Canada and US states that work.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Accessibility to CBD for mild symptoms such as muscle pain or stress & tension induced headaches would give us another tool, removing our mono reliance on panadol & ibuprofen, which both have negative effects on the body when used too often. It would allow us to rotate or use an option that has a different affect on the body, giving us choice & the ability to decide as required which option suited current symptoms, which can change daily.

If CBD is positioned in the same category as Panadol or Ibuprofen, then the cost of CBD should reflect the same regulation costs as those have on them.

Information on CBD - proper use, precautions, recommendations etc - should be freely publicised by the government & easily accessible. This should negate any nonsense on the web & should also negate the need for a 'prove your disease' conversation with a pharmacist. Conversations in pharmacies are held out in the open, usually in full earshot of other customers, & that is not a place where most people feel comfortable discussing their personal issues. If CBD is only for mild issues & has low risk (like Panadol or ibuprofen), then people should be able to self serve in the same way as Panadol & ibuprofen use. People can easily consult a pharmacist IF they have questions.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD safely for the past 6 months for hip pain and arthritis without pharmacists advice

I think lower pricing is important, CBD can be used for many health issues that are traditionally treated by addictive medications that destroy your body, a low price would make it accessible to the whole community, it is relatively cheap in other countries such as the USA

CBD should be available over the counter like Panadol m

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have had friends who have used cbd oil for pain control and reduction of anxiety with no side affects. It has changed their lives and they are major advocates for it.

The price and accessibility of CBD is important. If it is a lower price more people have access to it and it's benefits.

It would be best to be accessed readily and easily so more people can gain benefits to the product when they need it urgently.

Only publish my submission on the TGA website with confidential information redacted. My contact details and identity

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

The current available prescription through Pharmacy only is too difficult to obtain & too cost prohibitive for most people to use. There needs to be an easier way to access CBD oil and it must be affordable as most people that require it like myself are chronically ill and so funds are limited.

DescrCBD oil must be affordable. The current price at \$585 and the compassionate price at \$285 for 50ml is ridiculously expensive especially for the low dose CBD it contains. This is not affordable to get to full dose and to use moderate to long-term. at the current prices, I cannot afford to use it on an ongoing basis to treat my crippling conditions

This should be available easily from all pharmacies and from reputable suppliers not only in store but online. I am disabled due to chronic illness and so for me to purchase this in person is extremely difficult. I am fortunate to have support workers, but under the current system they cannot go in to a pharmacy to pick this up for me.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

A friend with chronic pain achieved pain relief and sleep all night using CBD and was able to get off using heavy duty pain killers .OxyContin... it works. It's medicine. It's safe. For myself it has helped with sleeping, with stomach problems and digestion/ elimination problems. Also for managing anxiety and stress.

DescrIt's important because it is a safe natural medicine with many benefits. It should be at affordable price, as many Australians are not wealthy. Many unemployed now too, me included. Prescription Chemical medicines have side effects. Some very serious yet they are not expensive and also often not effective at healing, only masking symptoms. Sometimes they sre Useful. However when a natural product is effective and safe and available for many varied illnesses it should be easily accessible at affordable prices fir everyone. It's not a drug, it's medicine.

I think it could be a profitable business for this country and since it's easy to grow with many uses besides medicine it seems silly to keep classifying it as a drug when CBD has no psychoactive properties. It could be produced at a very affordable price and the only ones to not benefit would be pharmaceutical industries.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil for help with pain and inflammation associated with my endometriosis. I have also known women with this condition use it. I used just a few drops a day morning and night and it greatly helped reduce my pain.

DescrCBD oil needs to be affordable for all and not just the rich. If the price is too high many people won't have access to it and sadly they tend to be the people that need it the most. It should not be sold as the latest fashionable health product for white middle class hippies. It needs to be for everyone. Perhaps even with subsidiaries for low income earners. It would be good if it were also claimable on health insurance

Only publish my submission on the TGA website, do not publish my name or any other information about me.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I would use CBD in a safe way and read the label and warnings.

This is how the change will impact me: I prefer to use natural medicines wherever possible and I think it would be beneficial to add CBD to the range of natural medicines available. I have chronic pain and sleep issues so anything I could easily access that would help to alleviate these symptoms would be very helpful.

DescrThe price of CBD would be a very important determining factor for me. If a medicine is cost-prohibitive then I would most likely not buy it. I think the price would also be important for other Australians because people with minor illnesses tend to already have increased costs associated with managing those illnesses.

I think the best way for the public to access CBD would be not only through pharmacists, but also through natural health practitioners such as naturopaths. It would also be good to access it through quality health food and supplement stores.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

This is a safe and natural supplement and will potentially prevent some people from taking more damaging chemical based pharmaceuticals. In the past I have used CBD oil to help sleep during a high stress period at work and was the one thing that helped me to manage the situation and come out ok at the other side. By putting this on prescription only you are putting money into the pharma companies who will increase the margins exponentially and that is not where we need to be post covid crisis.

DescrPricing this natural substance so it's affordable will help so many to access it and potentially reduce the drain on government Medicare spending. The price of everything will be important for Australians coming out of the pandemic

I would use CBD in a safe way and read the label and warnings.

Not applicable as currently not legally available.

DescrLower prices enable CBD to be affordable for those on low incomes. As many folk on low incomes experience stress and mild anxiety, affordable CBD may help them to manage these symptoms rather than develop more serious mental distress. Same goes for people who sometimes suffer insomnia, abdominal discomfort such as period pains or IBS and chronic mild to moderate pain.

Two issues need TGA oversight: concentration and contamination. Clearly contamination with THC is a problem for folk who operate machinery and vehicles. Concentration should be clearly labelled so that people are confident about dosage. Research and anecdotal evidence suggest that higher doses pose few threats, but care should be taken if used with blood pressure medications.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I and some friends have tried low dose cbd oil safely to assist with arthritic joint pain, mild anxiety, mild pain relief, and insomnia. All have reported positive results and some reported a reduction in prescription medicine requirements. All these instances of use were without pharmacist's advice.

DescrKeeping such products affordable will increase access to the most vulnerable in our community, who are less likely to be able to afford non subsidised medications. I and my family would greatly benefit from reducing prescription medication use whilst still treating chronic ailments

I feel access to such products should be based on dosage strength, with lose dose items easily available and high dose items available from pharmacies so that competent advice is at hand for the purchaser

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a chronically ill son who has been bedridden for a number of years. CBD provides the only relief he gets from pain & nausea.

I also have chronic pain, but milder and would like the opportunity to explore the options available to me.

I believe CBD is a much safer alternative to opioids for pain relief & has great effect on nausea & seizures etc.

Descr

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil safely without pharmacists advise. I suffer from chronic hip pain, accompanied by anxiety induced by continued pain. I am able to control my own dosage. Dosage does not interfere with any other medication I am taking. However, it is very expensive to obtain privately and the process to access it at the moment is just too daunting.

DescrIf it's too expensive, no one will be able to benefit from it and ease their symptoms. More people would be able to access it if the price in lowered and it is safely accessible.

I like the hybrid option ... as it will ensure it is accessible and accessed safely.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

As someone with a chronic illness, I would be interested in being able to try CBD if it became available, as few other medications have been beneficial for me, I also know many people overseas for whom CBD has been very beneficial.

A high price would make access prohibitive to me as, being on a pension, I can not afford highly priced medications. I think a moderate price, with PBS cover for various conditions would be the most optimal route to take.

I think having it restricted to chemists/pharmacies would be the best course

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

I have been prescribed by my GP both CBD and THC for Chronic Migraines / Pain , Insomnia and other, so have been approved for these scripts.

CBD and THC at this current time is UNAFFORDABLE for most people. So they have been very helpful to me, but unaffordable. CBD and other cannabinoids should be listed on the PBS Scheme, and prescribed by Doctors if the Doctor feels this will help the patient. CBD and other cannabinoids should ALSO be privately available to those wishing to consume for general wellness and minor conditions that don't require medical help by a Doctor. This submission relates to CBD, so I believe CBD should be available in Option B. That is the Private Proposal Option B. This would also make CBD much more affordable over time.

DescrAs mentioned on the previous page, CBD is unaffordable for most people. Doctor prescribed CBD is even more Unaffordable. If CDB was affordable, I would buy this product. So, Yes, the price is very important to Australians. If it isn't affordable, people can't use it. If CBD was affordable and readily available, many more people would use CBD.

Other than Option B as already mentioned. Overseas Corporations in the USA and Eurorpe have developed Cannabis Plants that have concentrated CBD with almost No THC detectable. This CBD strain of Seed is widely available to the states in the USA where it is legal to grow, and other countries where it is legal to grow. Australia should change laws to allow CBD Plants to be grown by the public for their own private use. This would make CBD much more affordable.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I believe that CBD in a low dose would you help with my stress and anxiety as it has proven to do as per previous research. I believe the benefits would far outweigh the costs of referring such people as myself to doctors and let's be honest main stream pharmaceutical companies

If too expensive I won't be able to buy it. It seems to me that to allow people to look after their own health rather than allowing doctors and in parallel pharmaceutical companies to decide, would be a move in the right direction

I believe TGA should follow what the Netherlands do.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I tried CBD oil while I was living in Canada. I've always been an incredibly restless sleeper and known to have random stints of insomnia for upto a week

The insomnia is not mentally induced, rather my body just won't get tired and CBD helped avoid not being able to sleep for a week.

Higher prices obviously impact the already high cost of living we encounter.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

For the last 43 years I have lived with an acquired brain injury, leaving half of my body partially in a paralysis state. Because of this trauma, my body has suffered many debilitating health conditions, from the age of 5. The biggest condition has been my brain injury. With it, I believe my body has tried to protect my injuries with inflammation, which has caused constant chronic pain with all parts of my body, even the paralysis parts. And you know then, when my paralysis sections of my body are feeling pain, pain is then at extreme levels.

This past year I have been prescribed [REDACTED] spray and [REDACTED] drops. And yes, they have the THC ingredient in it. I have found that the Sativex spray has been more effective with one spray, than working out which dose would work for me with Tilary drops. So I have gone back on Sativex. My specialist never suggested I try medicinal cannabis, even when I was suffering too much. I instead did my own research and thought about going down this avenue, and this thought process took me 5-7 years. I approach my specialist about the possibility to try it, as I was in desperation, because nothing was really working anymore..

Prior to taking Sativex, I was trying other forms of pain management, which some caused other health issues for me. I was trying over the counter pain relief, herbal alternative medicines, alternative treatments, and cortisone injections. None lasted long.

I do not abuse drugs, I have never smoked, so I would never want to smoke "weed". I never have gotten myself drunk, and on many occasions it would have been easy, but I have witnessed how alcohol abuse has destroyed so many lives, especially mine. As a drunk driver caused my near fatal car accident, causing my acquired brain injury. And I would never put anyone through what my family and I have gone through. No child should ever go through such trauma.

Yes, I still suffer some pain, but I no longer wake up in the morning with a spitting migraine and muscle spasms every day, and wishing I

didn't wake up, because the pain was so unbearable. I believe that my life would have been better if I had the opportunity to have had CBD as an alternative treatment earlier in my life. I believe I would have had a better life than I have so far. You would not deal well living in my body for 24 hours on a good day, nor an hour in my body on a bad day. Why do people like myself have to suffer so much, especially when we follow the rules?

Description is roughly around \$800 for 30mls. And for me it lasts 126 days. The cost is extreme for me, as I am on the Disability Support Pension. The Tilary drops were difficult to work out price wise because I couldn't work out the right dosage that suited me.

CBD should be prescribed and also to be put on the PBS.

CBD should be prescribed and also to be put on the PBS. I believe that CBD needs to be managed by a medical practitioner, as it is still a drug, and so it can be recorded of the benefits and side effects for each person taking it.

And those that require CBD should be able to eventually delete some of the other medications, under medical supervision.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I have not used this product. Although I have researched the benefits of using CBD on children and adults for treatment for a variety of conditions. It has beneficial properties and should be available to persons to use safely. I would use it for intestinal inflammation, improve skin condition, and overall wellbeing. I believe this should be available to all suitable users without jumping through hoops to get it. Also, if you don't make it readily available you will just create a black market where people are taken advantage of - we don't need that in Australia.

I have not researched to answer this question properly but it should be in the reach of people.

You could manage it like an S3 drug - through the pharmacy and registered on a database. (I use to work in a pharmacy).

Only publish my submission on the TGA website, do not publish my name or any other information about me.

No direct family experience, but have been a registered nurse for 30 + years. I’ve cared for oncology patients and patients and think it could have good synergy with pain relief and anxiolytics, particularly in helping stimulate appetite in severely unwell patients. The risk of diversion concerns me and I think it should be prescribed by Drs.

I would use CBD in a safe way and read the label and warnings.

I haven't used it but the medical literature suggests it might be helpful in relieving my symptoms that other medications have not been able to do. These have been prescription medications and I have found that, although they are legal to prescribe, doctors have preconceived prejudices regarding some of these medications and don't want to provide prescriptions, which has impacted my quality of life. Therefore, I do not want to get a prescription as I think CBD would be one of those substances that GPs would not want to prescribe because of their prejudices.

I am intelligent and capable enough to do the right thing but I think obtaining CBD from pharmacies is sufficient as you can always ask for advice from a qualified person.

I think the price should be taken into account so that it is available to a broad section of Australian society. I don't believe in discrimination.

Pharmacies without a prescription and not necessarily over the counter would be the best way so that there is qualified advice if people need it but taking into account that people are capable of making their own decisions or have already received advice from a doctor or complementary health practitioner.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

DescrWe are on a low income - disability pension. Low cost would be advantageous. High cost medicines only create a black market where there is no quality control, and are dangerous for the society as a whole.

Low cost high quality CBD would have the potential to drastically reduce hospital intake and free up beds for needy patients who require other treatment. Disadvantages to the general pharmaceutical industry would be greatly outweighed by a potentially huge rise in general wellbeing for the community.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Small skin cancer [1.5mm deep] scheduled for surgery. Started applying full spectrum CBD oil with just added a drop on a band aid and after 5 weeks was completely gone and now even the mark is fading. Cancelled the surgery they were amazed. Saved a lot of time pain healing time and danger of being in hospital.

Elbow pain from old sports injury which comes and goes with changing weather or if too much strain on elbow. Applied CBD cream and within 30 mins pain gone. Each time occurrence apply CBD cream with similar result. Fantastic.

DescrCertainly needs to be affordable and great value when available either online and/or from health food stores. Personally I think the focus shouldn't be on price but on certified suppliers with high manufacturing standards.

Online from certified suppliers with high manufacturing standards. There is a lot of confusion in the market where Hemp Oil is being sold as Cannabis Oil. This needs to be addressed.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

As an allied health practitioner I often see patients debilitated with pain, stress, mild anxiety, sleeplessness, and digestive problems. Some of these patients have reiterated first hand the relief from these medical issues that were previously not helped or worsened by other interventions or prescribed medications. I have seen not only their relief but their ability to return back to active functional people with such a simple therapeutic medication.

DescrAs a health practitioner, I see for the average person who becomes unwell, the cost of seeing doctors, specialists, treatments and medications adds up quickly. Especially when this is compounded with everyday living costs, a family to support, and perhaps impaired ability to work due to the illness/impairment. According to recent news reports following families accessing prescribed CBD medical treatment the cost was proving so prohibitive that it forced them to source it illegally. To have a lower attainable price for CBD medication can mean the difference for the patient able to support a functioning active life engaged in the world or not.

Given its clear evidence of benefits, good safety profile and low risk, it should be regulated as a complementary medicine in the same way that other plant medicines (herbal medicines) are regulated in Australia. Regulation of CBD as a complementary medicine will allow its prescription by other qualified healthcare practitioners such as western herbal medicine practitioners and registered Chinese herbal medicine practitioners, consistent with their scope of practice, and further increase access to patients. A specific CBD prescribing course should also be made available to qualified healthcare practitioners as it was to general practice medical doctors.

As a carer for a mentally ill sister and children with depressive tendencies the proposed changes will allow me to manage my families needs with an added product that is and has proven to be effective in other parts of the world.

Also as a physical therapist that is called on for cancer care and as a mental health facilitator it will allow me to better serve my clients allowing me the ability to monitor their usage to ensure balance in compliance and dosage for their care management plans. I have been called on to use CBD (oil in particular) in a couple of cases and it has been very effective in pain management, reduced nausea and headaches without any issues or side effects.

DescrA price will become important with the true non synthetic CBD's which is important. Quality clean CBD is necessary for efficacy but it also needs to be at a price point that will allow lower income earners the ability to access

It is important to find companies that offer truly quality unadulterated filler filled product. These products should be readily available whether it is off the shelf like a medical professionals (doctors osteo's dentists physios, remedial massage therapists, mental health) office pharmacy or through private provider companies.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

An older female colleague of mine has had a history of insomnia that has affected her wellbeing. Many sleeping drugs can be addictive and dangerous, these drugs are almost always not recommended for prolonged periods. She has found CBD has improved her livelihood and her safety even with prolonged use. She has found it is the only drug to work but she also lives in fear because of the criminalisation of CBD. She is a regular mother who holds down a full time job and I believe she should be able to make her own choices without fear of retribution or drug charges.

DescrAll medicines should have a rebate from the government in my opinion. CBD should be treated like any other form of medicine. Lower costs would benefit individuals.

I would use CBD in a safe way and read the label and warnings.

I am a pharmacist and see patients who are wanting to access CBD oil for pain control rather than using opioids but are unable to due either to prohibitive cost or reluctance of their doctor to prescribe it due to amount of paperwork involved. I have also seen patients who do use it and obtain pain relief but struggle to pay for it.

I believe the current high price of CBD oil prevents a lot of patients who would benefit from its use being unable to access this beneficial medicine.

I think CBD oil should be available from pharmacists without prescription and also from other health professionals where adequate advice and instructions for use would be provided.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I used some CBD from overseas before it was removed from Australia and found it was really helpful with my headaches, back pain and sleep. A friend of mine found it really helped her pain.

Decreasing lower prices would make it affordable to more people. I am on a casual wage so the lower price would mean both myself and my partner could use it.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe CBD should be made available for public use because I used high quality CBD daily when I lived in the US - it positively impacted my sleep & anxiety levels & general wellbeing. My mother still lives in the US & uses CBD daily - she has also seen a positive difference in her sleep & a reduction in her mild headaches. In addition, my husband has IBS & I believe CBD could help alleviate the severity of the symptoms of his condition.

I think CBD should definitely be more affordable. Higher prices mean less people will be able to try CBD. For example, CBD is a much more natural alternative for sleeping trouble than taking sleeping pills. Lack of sleep in particular is something that plagues most people & a lower price would allow more of these people to try it.

I believe being able to purchase high quality CBD online is essential. Not everyone has the ability to go to a chemist & consult with a pharmacist.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I feel CBA should be widely available because I've heard via TV how it has helped (children) with dreadful health conditions. I'm a 72 yr old female who has struggled with various health issues all my life. IBS, GERD, food intolerances & sensitivities & mid thoracic back pain which is debilitating. More recently, Colorectal cancer recently completing chemo & radiotherapy. I'm currently attending an Osteopath & taking Panadol for the pain which causes constipation which is not the best thing to endure after radio therapy in that area. Many, many people would benefit from this amazing oil. Thanks for listening. Barb

I believe CBD should NOT be throw away cheap, but it should be a price where ordinary people like myself on a pension/unemployment could afford it. Could it be provided on a 'means tested' basis?

I believe CBD should be provided like all other prescriptions & purchased from Chemists. This way would eliminate greedy individuals from buying it in bulk (like toilet paper & other items during COVID19)

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Consumer

I would use CBD in a safe way and read the label and warnings.

I have friends who have fibromyalgia in South Africa and they use this to relieve pain. I would like the same opportunity for my friends here in Australia who have this condition.

DescrMost people who struggle with the types of illnesses that CBD would help are often low income earners often because they have an inability to work due to pain levels. Therefore it is vitally important that cheaper CBD options are available.

My question would be, why would a limit (by way of pharmacy only access) be placed on a plant derived medication that has little side effects that could help so many people?

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I would use CBD in a safe way and read the label and warnings.

I have many friends and family members struggling with chronic health issues. This products could be extremely beneficial to combat some of these health challenges or at least ease the suffering.

I would really like access to it to treat my chronic fatigue.

Lower prices means that it is more accessible and could help more people. I know that many people would buy it if the price is accessible and you will look at recouping investment via the quantity sold as opposed to it only being available at a premium. I am a low income earner due to my chronic illness. This could really help me and improve my quality of life drastically.

I think that we should be able to access whatever we need with correct education for a reasonable price as long as it isn't hurting anyone else. I would like to have access to organic products widespread anywhere without a prescription. If we can be responsible for our own alcohol consumption then surely we can be responsible for our health.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The proposed change would greatly improve the functioning and lives of myself and many others around me. As someone who suffers from a major illness and even as someone who has family members with things like chronic back pain, arthritis, IBS, anxiety, insomnia, etc. I think that having something like this available would be of great help. For example, in the case of my partner, he hates taking opioid based pain killers but it's the only thing that is prescribed to him due to no alternatives. Having access to something that is safer, more effective and less addictive would be an easy and obvious choice for him. Myself and two of my family members have tried CBD oil and we all found it to be such a great addition to our lives. It significantly reduced our pain whilst not causing any side effects or anything similar to the effects of opiates like endone or tramadol which caused things like mind altering side effects, nausea, etc. Having access to something that not only improves everyday functioning and reduces pain, whilst also not experiencing moderate side effects that contribute to reduction in enjoyment of life, would be a life changer for anyone, whether it's a mild, moderate or severe health problem.

DescrHaving higher prices when accessing things like CBD oil would affect me, as a low income earner but also as someone who already has to spend lots of money on medications for existing health issues. I also think that the price plays an important part because the higher the price, the less likely people are able to access it when it would greatly improve their lives but also means it's more likely that people turn to the black market for cheaper, unsafe, uncontrolled alternatives to try and cope. This is obviously a major issue because they risk being criminally charged and/or injured (fatally or otherwise) just because they were unable to access something that would have greatly improved their quality of life when living with mild, moderate and severe health conditions.

I believe that the public should be able to make an informed choice on whether or not to access CBD to treat their health conditions. I believe that having a pharmacist assess whether or not someone should access it is one good way to help roll it out safely. I also think that even having specific dispensaries with trained

pharmacists/practitioners could also be helpful. But regardless, as long as information is provided to the public on CBD oil and it's effects (just like any other medication), then making an informed decision on whether or not to use it should be upto the people (age 18 and up of course) . Should restrictions be placed, I believe it should be inclusive of the things that CBD oil has found to be useful in, including milder conditions like insomnia, back pain, anxiety, etc.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My son has used CBD as prescribed through Drs for his anxiety and ADHD, but it is unsustainable for him continue taking it at this time due to the high cost of the product. I would also like to try the CBD for myself as I suffer from long term insomnia. All the medical drugs have detrimental side effects for long term use with sleep. I follow all the recommendations to improve my sleep through proper sleep hygiene, but nothing has given me any significant change. I would like to be able to access the CBD at an affordable and sustainable price to help improve my sleep.

The price is significantly important. Currently we helped our son pay for his first prescription of CBD from the Drs, it was over \$600 for 2 little 100ml bottles. This is absolutely unsustainable, by making it too expensive to continue.

If we really want to help address a lot of societies problems with stress and anxiety and help prevent young people turning to hard drugs as a way of coping we need to have much safer, affordable, accessible options available to people. This does not negate the need for therapy for these people but it does give them the space to access safer products that can help them in the short term.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My family has not had the opportunity to try CBD oil, however I know that it would make a positive change to our lives. Mental illness runs in my family and inflammatory conditions are present which would both be managed well with CBD.

I think it is important to allow Australians the opportunity to choose where they source their CBD oil from. I personally would only purchase the highest quality, organic, 100% pure CBD oil. The price is not a factor when I'm looking to use CBD. Obviously, a lower price is much easier for families who may already have high medical expenses and lower incomes. I think a broad range of suppliers and prices is necessary.

I would personally like to get my CBD from Young Living. This CBD oil is pure, organic and ethically sourced. I would like to be able to buy this, as needed when it suits me. I do not think CBD should be controlled by Dr prescriptions and pharmacies.

Only publish my submission on the TGA website with confidential information redacted. Do not publish my name or contact details.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have never tried CBD oil however I have cared for a client whose family administered the medication for anxiety with great efficacy. I think being able to access and use a low dose medication for minor issues such as stress and to improve general well being would be ideal, provided it is produced under the safety standards that govern other over the counter medicines (OTC)

I would be keen to be involved in providing feedback about using CBD oil and would welcome the opportunity to participate in research in Australia.

DescrPricing can adversely affect access to the product, especially in disadvantaged groups such as pensioners who might otherwise benefit from CBD oil for minor ailments

I think low dose CBD oil needs to be available OTC at pharmacies and health food shops not supermarkets. Any higher doses of the substance for serious health issues should be attended by suitable qualified and experienced prescribers.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have 2 chronic health conditions involving the nervous & muscular systems. Used to take weak opioids regularly, but CBD has worked better for me. My GP didn't want to prescribe medicinal cannabis and I wouldn't have been able to afford it! I don't like doing it, but I have had to access CBD online as it has been cheaper that way. I do a great deal of reading & research about CBD so I wouldn't need a pharmacist's advice. CBD should be readily available in Australia to bring us into line with many other countries. I have never had any negative reaction with CBD only absolutely positive benefits, without side effects that I had with prescription opioids that weren't as effective. I would be so glad to be able to purchase a quality product from my local chemist.

Absolutely price is important! The current system is way too expensive at \$300++ a month. Only rich people can afford that. I am happy to pay for quality product but at a reasonable cost.

Access via chemists.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My story is I have tried cbd oil and find it works about 50% pain reduction on my fibromyalgia. It works on headaches and stomachache and also is a Great Depression reliever. Everyone should have access and know it is a decent and proper dosage. Unknown dosages can cause issues like overdosing.

DescrLower prices for cbd would greatly effect me as I would then be able to afford medicine that has little to no side effects and has great pain reduction.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

I have been taking CBD on and off for the last 20 years and have only experienced benefits from taking it. In my personal opinion it has contributed only positive effects to my well being and I would appreciate having the opportunity to take it legally and with less difficulty in procuring it.

It is already widely available on the black market for very low prices. Should it be priced out of the hands of average Australians, we would see the black market rapidly expand and open up the potential for unethical distributors to adulterate their product with cutting agents that can have negative consequences, such as what occurred recently in the US with the THC vaping illnesses.

I feel licensed operators and pharmacies should be how the public is able to access CBD.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD safely with instructions on dosage and really helped me in a time when my mother had died, I wasn't sleeping and was very stressed and anxious. I have a good friend who while receiving chemotherapy for ovarian cancer was helped hugely to sleep, with side effects from chemo and with pain management from CBD. My mother also used CBD for sleep and pain management effectively while she was dying.

The price of CBD is obviously important as it is everyone's right to be able to access good effective medication for their condition. CBD is a natural effective medicine that people on low incomes or no income should be able to access

For the public to access CBD, chemists are a good place of access. Not only doctors but naturopaths and other natural medicine practitioners should be able to prescribe as well and chemist to dispense as chemists can give advice and check doses.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have heard stories for a long time about people using it for all sorts of issues, particularly seizures. Also cancer. The stories I have heard of are NOT people who take drugs but are people who tried all of the orthodox treatments with no return to health. They tried CBD as a last resort & with excellent results & no side affects that they could detect. I also know that it is of great help for extreme anxiety without the after effects that other drugs seem to have. I think that testing should be done as soon as able to allow this as another treatment & to stop the stress of feeling like people are going against the law. I truly think that there is more than enough evidence out there to warrant extensive studies to move us forward in this area. I also think that we need to be doing many more studies on all medicinal plants. People who go to naturopaths are generally healthier than most & this is because we use treatments that support the body back to health. Chemical free food, healthy lifestyle, we have such opportunity here to move forward as a nation but I fear that we continue down the road of the big pharmas, they have their place but so does natural health. Please do the science on both sides - for money making drugs and natural herbs, vitamins etc.

I think health should be affordable for all. I also believe we should have a choice in how we choose to take care of our health. Our family chooses natural health more often than not & with great results. Depending on the health issue we go doctor or naturopath. Unfortunately it now costs more to go to the naturopath as there are no longer rebates. We are very disappointed but continue going as we have experienced this way as best for us. We should definitely have affordable choice for all types of health care.

I think it best if it is available with some type of support. This is a hard one as doctors cannot really prescribe it without all of the scientific research which should happen but will take too long. Perhaps through certified natural therapists & bring back the rebates so that consults are affordable.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My relative has been hospitalised twice with a disabling anxiety disorder. This has been very disruptive to her life, compromising her capabilities and responsibilities to her professional work and her children. The treating psychiatrist tried a number of conventional medicines however with no therapeutic success. As a final resort the psychiatrist prescribed CBD. Remarkably, this treatment seems to be working. My relative's capabilities are returning and life is greatly improved for her and those of us around her that have been involved in providing support. I am amazed and very grateful for the improvement that CBD oil has brought. The main drawback to this treatment is the huge impost in terms of financial cost. I think many people could be helped to lead happier and more productive lives if CBD could be made more accessible to everyone who needs it, i.e. at a more affordable cost.

DescrTreatment with CBD oil is restoring my relative's sense of balance and control over her life. She is less stressed and is more capable of engaging with her working life and family responsibilities. She is much happier to be feeling this improvement in capability.

I think distribution through pharmacies, as per other medicines, is a reasonable way to go provided costs can be kept to what might be affordable. The current price of more than \$300 per month places this useful product out of reach by many people who would benefit.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

All my life I have been suffering from anxiety and panic attacks, often crippling my day to day life. For the past 10 years I also have been experiencing chronic pain in my back and knees, due to age related degeneration. According to my latest ct scan, I am suffering from moderately severe degenerative changes from L2 to S1. At L4/5 I have a mild degenerative bulge with minimal thecal compression. The pain in my knees prohibits me from squatting and moving freely.

DescrAs an age pensioner, I am limited by how much I am able to spend on anything really.

A family member has used legal cannabis products in conjunction with other therapies for cancer treatment. I has provided enormous benefit. There is also a great deal of evidence to support CBD being an effective therapy for many other conditions, mild to severe, from countries that have already legalized its use. There is no convincing argument I am aware of to not allow people to access this product.

I do not think price is important at its inception. Once a market is created for this product, competitive market process will bring down costs.

I would use CBD in a safe way and read the label and warnings.

This product is widely used around the world with proven health benefits, by making it illegal in Australia we are pushing something into the black market. This should be dispensed by trained herbalists.

The dose will depend on quality and on individual needs. So should be dispensed by qualified herbalists not pharmacists, who do a day's course in herbal medicine .

Let people who are properly qualified dispense this making it a responsible way of dispensing. Qualified registered herbalists

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used cbd previously & found it very beneficial. I suffer from Fibromyalgia which causes pain & interrupts my sleep. I found the cbd helped me to sleep through the night & woke feeling rested which in turn meant less pain. Sadly, it was very expensive & I could not sustain the cost. Access to low cost, safe cbd oil would be so very life changing for myself & many others in similar situations.

Simple really, the majority of Australians just cannot afford the extra expense of high cbd. CBD needs to be accessible to all who need it.

Options could include purchase via a chemist, health food store or online.

Only publish my submission on the TGA website with confidential information redacted. Email address & location

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I would use CBD in a safe way and read the label and warnings.

PolyMyalgiaRheumatica was diagnosed over 3 years ago and I managed to access CBD once only with great difficulty and secrecy, which was ridiculous - no pharmacist involved. It gave me some relief so that I could sleep at night which aided in pain relief for a few hours. I take prednisolone now and trying to reduce amount because of bad side effects, but still leaves me with pain daily, so access to CBD would help with this transition, as long as there was no contraindication with using either products.

As a pensioner, the lower price for CBD would obviously make it more accessible for me.

Only publish my submission on the TGA website with confidential information redacted. Do not publish any information specific to my health history.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My partner has used CBD safely for assisting with mild stress and sleep problems without a pharmacist's advice.

High prices for plant CBD would prevent us from buying it. Lower prices for plant CBD is very important for the Australian community because if they can't afford it they will use cheaper more dangerous and addictive drugs for stress and anxiety.

Make it available from a number of reputable suppliers (not just pharmacies) so that it can be readily available. The Australian government should support plant-based CBD companies to ensure there is a good and well managed reputable supply.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Currently used for chronic back pain that current prescription meds don't completely help relieve the pain with CBD I am able to have a restful sleep & the pain is more manageable when I'm awake the next day. I only use at night before bedtime & it seems to be very effective.

Whilst the price is so high people are still inclined to use dealers to purchase because it's cheaper. If the government made it accessible & cheap the dealers wouldn't make any money & the legal problem will go away.

The best way would be through prescription & pharmacy dispensary in order to monitor. Then prescription via a specialist shop as America's doing.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I would use CBD in a safe way and read the label and warnings.

I have suffered with a chronic pain disorder for most of my life. I have had multiple medical procedures and tried many different treatments over the years. In other countries, medical CBD oil is used to treat my condition, but in Australia it is too difficult to gain access to it. With an effective treatment, I would be able to work (at the moment, pain prevents me from working) and provide for my family.

The current price of medical CBD oil is prohibitive, even if access is gained through a medical doctor. I would not be able to use CBD as treatment for my health condition unless the price was competitive.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I don't believe that chemical medicines help people as you end up taking different drugs to help with side effects of the previous drugs. I would much rather take more natural drugs that people seem to have had better response to.

Price of living is sky rocketing so people can't afford to buy expensive medicines. For myself I would end up not taking them if they were expensive.

I think buying through a naturopath from a health store or from a chemist. As a nurse I actually think that all natural remedies should be prescribed from a naturopath and not just bought over the counter.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

At this stage I do not wish to use CBD but I would like to be able to access it in the future if my doctor, naturopath or pharmacist recommended it for an illness.

As someone who already has to take a daily medication, I believe a lower price for CBD would make it easier for me to purchase if it is deemed that CBD would be greatly beneficial to my illness. Many pharmaceuticals are already very expensive due to research costs and the profits that big drug companies want to make. CBD would be a relatively low cost product to manufacture.

CBD should be sourced by the public via reputable sources such as pharmacists or naturopaths, and the CBD must be high quality and effective.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

The proposed change will impact me greatly and in a good way. Many factors in my life contribute to getting painful headaches such as working in front of a computer everyday for work and feeling major stress in my life. This also ends up resulting in a restless night. I believe CBD will help keep these headaches at bay so that I am able to have a painless day and a restful night's sleep.

The price of CBD being higher would affect me and I'm sure many more Australians because not everyone earns a good wage. I have a lot of bills to pay each fortnight as well as grocery shopping, so after paying for all of this, I'm not left with much to spend. Lower prices would mean it's available to a wider range of Australians which I feel is very important.

My husband and I have used CBD oil for anxiety and restful deep sleep. We have found that due to sleeping soundly it has had great impacts on our life, such as increased energy, clearer thinking and a sense of calm.

The price for CBD oil is high and I feel as though this makes the product unaccessible for low income earners. A lot of people suffer from anxiety and are put onto addictive harmful pharmaceutical drugs that have bad side effects in the body.

CBD should be accessed through chemists, health practitioners, doctors and hospitals.

I am a registered acupuncturist and have many clients who would benefit from legal, affordable CBD. One client is sourcing it from NSW and it is very expensive, but without it she cannot sleep, and insomnia is detrimental to her recovery from a double hip operation. She also suffers chronic pain. The CBD helps her muscles relax. It has been very helpful for her.

Many cannot afford CBD if it is highly priced. Patients on disability pensions and with chronic health issues are often the ones most in need.

I am using CBD oil (very expensive) on advice from medical doctor to assure good sleep patterns ; helpful to my health and wellbeing to balance my immune system.

I find the cost far too high, I need to save carefully when I can see another bottle is needed. I am. at the point where i'm thinking I won't be able to continue this spend every few months. I have to avoid rates paying months. Many Australians would find the cost prohibitive.

To be able to purchase from a pharmacy, without prescription, would relieve purchasers of need to find sources, other than online, that are reputable. Pharmacies are located in convenient locations for shoppers.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep, general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

I think it should be everyone's right to be able to access this natural plant medicine. Its safer than opiates,narcotic analgesia addiction is a massive problem in the usa,by using cbd this could be avoidable in Australia.

I think it should be a reasonable price so all who need it can access it

More availability for healthcare professionals to access and dispense

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I've been trying to minimise inflammation to slow a benign tumour growth that has affected my ability to earn an income. Freely available low cost medicinal CBD will allow me to utilise my income on general day to day cost of living. Being able to access high quality Medicinal CBD will also mean that I will have greater options for high quality products that will suit my needs.

Lower prices will allow me to have a greater quality of life as the portion of income I spend on medicinal CBD will be less. Lower prices allows for more Australians to access the products and test for themselves the efficacy of CBD for treating their ailments.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I suffer from IBS but also from other conditions and might need a dose over 90mg. I do not need pharmacist advice necessarily but need to find out for myself what works.

Of course it is important. I am on the disability pension and being ill costs. I have spent a lot of money already and it is ongoing.

I would use CBD in a safe way and read the label and warnings.

My health and well being, not to mention my ability to function daily, depends on my daily dose of CBD oil. Its the only thing that works on my pain, anxiety and sleep issues. My elderly dog relies on her dose also to alleviate her joint pain. I have numerous friends and family who also rely on CBD oil for their health and well being.

Lower prices are essential. This remarkable, eons old natural medicine must be made available to the wider public. It places considerable financial stress on my family to buy our CBD oil, but as our health is dependant on it - we go without other items to make sure we have it. Lower prices would be such a help.

Natural practitioners should be allowed to recommend CBD and advise on dose - provided they are trained. I am studying a diploma in Medicinal Cannabis & CBD oil for exactly this reason.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would be able to afford for arthritis pain.

I currently qualify for a prescription of CBD for bad arthritis in my neck. I cannot afford the dose I need. I can't work because of this problem. I want to work. I was an RN and have given up my registration. I think it would be better for me to go to work and have a wage and a sense of achievement without being dependent on my husbands wage. My health is a huge drain on our wage.

The TGA could make it known where CBD can be obtained lawfully by publishing lists of providers. I had to search for a provider only to find out the cost is enormous.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

There is plenty of research done in Australia and world wide to provide ample scientific evidence of the effectiveness of this Natural medicine. There is no reason why low cost, safe cannabinoid medicines cannot be prescribed right now with current approvals. New medicines will become available after upcoming trials prove them safe and effective as per any other medicine.

Any improvement in Health for the Australian population, should reduce the taxation required to fund expensive big pharma monopoly medicines. Opioid addiction and dependence would have another option for treatment. I think there would be a drastic improvement in quality of life for people with neurological based disorders could reduce cost in this field.

Provide it via Chemists. If it is specific for conditions or treatments, it should require a prescription so doctors consider it an option for use - otherwise they will prescribe whatever gives them financial incentives.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I have a coworker who works in a high intensity hospitality role and suffers from Sciatica. As an alternative to high dosages of opioids to manage her pain she has switched to a CBD based oil which she rubs into painful areas. This has allowed her to manage her pain and keep her at work in a way that was impossible before the use of this treatment. Widespread availability would allow her to ensure that she can always have a supply on hand so she doesn't have to engage in excessive use of opioids just to earn a living.

Higher or lower prices would not affect me. Though I think it important that all people socioeconomic walks may have affordable access to CBD based products to mitigate pain. As an alternative to opioid based pain medication I think it poses far less risk in the long term and has a much reduced impact on day to day living in the short term.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I have used cbd at great financial cost in order to ease side effects of other medications i take.

Price is very important, I currently spend over \$120 a month to access cbd and would hope that opening the market to be legal and more easily available would reduce this cost.

People who want to use cbd are for the most part sensible, grown adults who want a natural way to ease their issues. Allowing access through a chemist without script seems a sensible option to me.

Having scoliosis I have back pains, even though the scoliosis is mild the pain still gets in the way of my daily activities I love to do such as bike riding. Having a cheap way to stop the pain would help me through out my day.

I think it should be as cheap as possible to make it available to the people who need it, the people who need it are already suffering and on top of that quite possibly they are all ready paying expensive medical bills due to their conditions.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

It would help both me and my partner in a better and healthier way of living. Feel better taking a natural product made from nature's wonder plant.

I think paying for a quality product is important to get the right results. I think if it's too cheap it won't be quality but if it's over expensive no one would buy it. Somewhere in an affordable price range for a quality product is what I'll be looking for.

I think consulting through an experienced doctor or a company like Tetra Health is a great way to get advice and knowledge on CBD and correct dosage etc. I think also being able to choose different forms or way to take it would be beneficial for people with different symptoms.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Recently it has been extremely hard for me to get medications for my back, and even when I do, they are usually benzodiazepines or opiates, both of which are highly addictive and dangerous. I would like an alternative that is both safer and easier to come by. I think it's silly to perpetuate the U.S.A's failed war on drugs, especially for something such as CBD oil.

Higher pricing just singles out the poor.

Just Legalize it for gods sake.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used CBD before. I know of 3rd party people that have and have had great success with it for stress, anxiety, pain, sleep, depression, anti-inflammatory and other health related things. I would like the option of having this available like I have the option to use Panadol or Nurofen or some other such thing. I do not like to use Panadol or Nurofen or any drug often as I don't like what it does to my general gut health and potential hang-over or addiction threats. I want the choice of a range of health products to use as and when I need.

The price of any CBD product must be kept within reach of all Australians - not just the wealthier people - everybody should be able to access it without price wars and potential (false) claims - keep it clean and simple - natural, not adulterated to bump the cost.

I think it would be best to have access to CBD in all places that sell health products i.e. chemists, health food shops, wellness clinics etc.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Date: Wednesday, 20 May 2020 9:10:27 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I use for pain and sleep and receive it on script from my Dr however it is very expensive. My husband has also found it helpful for his sleep issues

I would be able to continue to use it as prescribed at the correct dose if it was not as expensive.

Other healthcare practitioners would make it more affordable and accessible.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have done a little reading into the health benefits of CBD and have heard many testimonials from family in the EU (where CBD is available over the counter) and would definitely like to have access to affordable CBD that I can purchase over the counter. In my particular case I would like to try it to ease my stress levels, insomnia and back and joint pain. Considering that CBD doesn't have any psychoactive effects and is used safely all over the world I feel it would be beneficial to have it available as a supplement. It is a shame that it has taken so long for the TGA to re-evaluate the use of supplemental CBD where, overseas it has been available for years.

I believe it would be great to see CBD readily available and affordable for all Australians. The hemp plant is not a demanding plant to grow with a relatively quick maturation period so I don't see why high quality and affordable CBD cannot be produced in Australia. I have been following the evolution of Medicinal Cannabis in AU for some time now and it is a shame that CBD alone has so much unnecessary red tape around it. I feel it should be available as a supplement for general health benefits while research into specific medicinal treatments is on-going.

Best way for the public to access CBD would be over the counter at the local pharmacy.

Only publish my submission on the TGA website with confidential information redacted.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

CBD is a plant extract that does not have any psychoactive effects. It has been shown to have great benefits in maintaining general health and helping the body maintain homeostasis. In the EU and other parts of the world it is available over the counter as a supplement. I don't believe there are any negative or adverse effects to CBD supplementation and as such would like it to be available for use like fish oil, EPO and other supplements are.

Excessively high prices would make it unaffordable for most. Based on personal research I would like to supplement with CBD on a regular basis for the synergistic health benefits. To make this possible the price would have to be reasonable and competitive relative to pricing around the world.

Over the counter at pharmacies just like any other supplements. High quality CBD supplements with recommended dosage based on available scientific literature and inline with global trends i.e. EU

I would use CBD in a safe way and read the label and warnings.

Everyone in my family has used CBD oil safely for various reasons. Personally it helped me immensely with stress, depression, terrible PMS issues and painful periods. It also assisted me with better sleep patterns.

I cannot always afford to take it when I need it so at times I still suffer from some issues. It would be amazing if it was more affordable.

I think it would be wonderful if naturopaths, doctors and pharmacists could all provide it.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

After being involved in a car accident in 2000 I was left with a lot of pain. After several months on strong pain killers I realised that I could not continue to use them long term. Over time I have Recovered however I deal with a some degree of pain on a daily basis as a result of the accident .

For the last few years I have been following a lot of information from around the world on cannabis and its usage and firmly believe that it would be beneficial to so many patients , myself included. However it needs to be easily accessed and be affordable for most .

If the price is too high it would be unaffordable long term . I am on a disability pension and many others who would benefit from being able to use this product are also on pensions. It should not be priced so that only the most advantaged in our community could have regular access to the product

access via pharmacies I think would be a good option - most people can access them and advice could be sought if necessary.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

CBD oil is natural and in an unadulterated form I could use it for relief of medical symptoms like anxiety, stress, mild pain relief, getting a restful sleep. It would benefit my general health and wellbeing. Getting easy access would be beneficial to everyone but I'd want to make sure it is derived from the actual plant and not a synthetic version.

If CBD oil is affordable then we could all benefit but if it's out priced for most people then it may as well be illegal still as we won't be able to afford it.

I believe it should be treated like panadol and be available in the supermarkets for a similar price so it's accessible and affordable for everyone.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD to reduce extreme pain quickly and effectively with no side effects. I know of many people that have used CBD with amazing results for many health and mental issues. The fact that CBD is not readily available for those in need is a disgrace and legalisation needs to happen sooner rather than later.

Lower prices for CBD would make it affordable and accessible for ALL Australians. According to the Australian Institute of Health and Welfare 54% of Australians have a chronic health condition costing the Australian Tax Payers millions of dollars in healthcare, by keeping the price of CBD affordable in Australia the cost of healthcare will be reduced easing our National debt and helping the economy.

CBD should be readily available for ALL Australians to be purchased easily across the counter without no need for a prescription.

There are people close to me who suffer from chronic illness and pain who would benefit from good quality cbd being available at an affordable price.

CBD is expensive. It must be made more affordable for those on low incomes.

I would prefer if cbd was made available through health food stores. Many health store staff already have natural medicine credentials and could advise clients and customers on their cbd options.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

Due to stress and anxiety from an underlying mental health issue, I have used prescribed drugs like benzodiazepines to relieve stress. I believe CBD is a much healthier option, coming from a natural source, having low risk of dependency and next to no risk of overdose. I have noticed significant reduction in insomnia and anxiety when using cannabis at night, but I discontinued my use of the drug due to risk of losing my licence, relationships and friends. I believe having readily available CBD would be beyond beneficial to many people's health.

Lower priced CBD would be more beneficial, but I'm not sure just how expensive "higher" priced CBD would be. Lower priced CBD would be more appealing to the majority of Australians I'd imagine, as it'd be more accessible to those in lower income areas.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I would like it to be available so my parents who have arthritis and sometimes have trouble sleeping to have access to good quality CBD oil

I believe the quality is more important than the cost however obviously those with anxiety that may have trouble earning money would benefit from lower costs. It is also very helpful for our beloved pets and lower cost could help more.pets gave access (via their carers)

Access could be like herbs and supplements... chemists, health food stores, pet product stores, health practitioners

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My partner has a level of social anxiety and general nervousness which sees her shying away from medium/mass size gatherings. She received some Medicinal CBD oil from a friend who had it prescribed to her, which gave her a 60 day dose. It quite literally changed her livelihood during that time. A couple days into taking it, she reported noticeably increased feeling of calm and general better mood. Gradually over the course of the month she was no longer nervous to interact with people she didn't know and reported that she slept much better because of the general increase in mind health. I noticed a major improvement from her and it helped us only get closer and have a more sound relationship. I think the most important thing to note here is that she experienced 0 negative side effects from the CBD as well! She could not believe how much something could help without any drawbacks whatsoever. Please consider the wide spread availability of CBD so others can have some relief of anxieties in this ever increasing world of pressure amongst younger people! Thank you

As CBD can be used to treat chronic mental and physical imbalances, it needs to be affordable over time. Also, for the uptake of CBD to be viable, it needs to be introduced at a price where people would give it a go and not shy away because of the price

Seeing as though CBD is not Psychoactive whatsoever, i don't see why it can't be accessible as easily as over the counter vitamins. It comes from a natural plant and does not alter people's states of minds from what i have heard reported. No more than many other over the counter pain killer can if taken too often. I have also never heard any reports involving people being hospitalized or dying from a CBD overdose.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I am on disability pension due to a chronic condition that causes constant extreme pain. I am unable to use most painkillers due to the severity of the side effects. I have used CBD oil before and it was quite helpful for pain reduction and without noticeable side effects and it improved my quality of life immensely. Unfortunately its cost is prohibitive on my limited income.

Both myself and a number of friends I have networked with from illness support groups have found relief from CBD but are unable to afford to use it due to our limited incomes.

The TGA already approves numerous pharmaceuticals for which properly used and prescribed doses kill or medically injure thousands of Australians every year. Many of these such as aspirin and ibuprofen can be bought in supermarkets. It's amazing that it is such a battle to get a pharmaceutical such as CBD with a relatively great safety profile and greater efficacy than these aforementioned painkillers made easily accessible and affordable. CBD should be on sale at supermarkets and over the counter like these other painkillers are.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have had cancer and had good results using the CBD oil.

It is important that the price is reflective of the true price of the product which should not be so high and inflated for drug companies to make millions out of people's suffering.

The public should be able to buy it as needed so long as it is for medicinal use, whether it be for stress, anxiety or pain or whatever. This should be at the clients discretion just as with other pain killers such as panadol - so long as all the dosage and side effects etc are clearly explained.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

By making CBD easier accessible in a legal way, it will help diminishing the stigma surrounding medicinal cannabis and teaching people about the benefits and that without the THC component it will not make them 'high'

I have used CBD safely in the past (without pharmacist's advice) to help me sleep more restfully and to ease some neck pain and headaches. It worked really well for me. I would much prefer to try CBD as first treatment for minor aches and pains rather than the conventional Panadol and ibuprofen.

I believe lower prices for CBD (as long a quality is not compromised) will make it more accessible for more people. To have access to CBD should not just be for people that are financially better.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I currently use CBD safely For a variety of illnesses. It allows me to still function as a mother and a business owner. If I didn't have it I would have to take the tablets the doctors have prescribed which would mean I would be laying in bed and not a functional member of society.

For a variety of illnesses. It allows me to still function as a mother and a business owner. If I didn't have it I would have to take the tablets the doctors have prescribed which would mean I would be laying in bed and not a functional member of society.

Allowing CBD to be purchased in chemists and specialist stores as well as online would provide access to an affective drug that does not have the ramifications that things like opioids have. If it is widely accessible people would use it more.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Currently, I have a few friends who use it with beneficial results. I think people should be allowed to choose if they wish to use it and that it should become more affordable for everyone.

I think that if the price was lower more people who could use it would.

I am a distributor for Young Living Essential Oils and they have good quality CBD products. It would be highly beneficial to people in Australia if they became available here as the quality of their products is outstanding.

Only publish my submission on the TGA website with confidential information redacted. Do not publish any information specific to my health history

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

This would impact me in a very positive way. It is a natural product and many people have benefitted from its properties. I realise there is massive pushback from pharmaceutical companies because they can't profit from CBD - but their products for pain, general wellness, anorexia and sleep aids are all plagued with a massive amount of side effects. For these reasons I will not go to my GP and request that type of medication. If I had access to CBD I would not hesitate in testing it out on myself and would encourage my sibling to try it instead of cancer drugs for her painful arthritis. We've all seen the videos and read the testimonials. It is an abomination that this country makes it so difficult and even illegal for its citizens to have access to CBD.

Of course the price makes a difference. First of all its a weed. Anyone can grow it - there are instructional videos on Youtube how to make CBD oil.

If this country and the TGA is so beholden to the pharmaceutical companies and we aren't allowed to grow it ourselves then obviously it should be cheap. A lot cheaper than the pharma drugs that you approve.

It should be available from all health food stores and on all pharmacy shelves but not OTC.

Only publish my submission on the TGA website with confidential information redacted.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I understand from what I've read, that CBD will help me with osteoarthritis, from which I suffer and post operation pains, primarily abdominal.

Medicines generally are expensive so if CBD is lower priced and it is suitable for the individual, then it should be cheaper.

I think that it would be correct for it to be accessible via your GP. Then there is some control.

I would use CBD in a safe way and read the label and warnings.

I work with clients on a weekly basis as a Bowen Therapist and for a couple of them having the option of CBD was crucial for their health and wellbeing through pain management.

Of course the price of CBD is important. Everybody should be able to access CBD and it's benefits especially when illness and pain management are so expensive. It should be as affordable as Paracetamol!

Access should be everywhere including places like Woolworths and Coles etc. It is like anything else on their shelves, safe unless taken incorrectly.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I'm on low income, and have issues with stress, anxiety, and insomnia. When I was in the United States back in September 2019 I went to a dispensary and bought some CBD for the trip since I suffer from insomnia when I'm not in a familiar setting. I had the best nights sleep in months.

The current Prescription Process in Australia is fatally flawed and sets patients up for failure.

The cost of Prescription Cannabis products is well beyond the reach of most patients and sets patients up for failure.

Having access to CBD in a Pharmacy setting would make it available to many more people than the current system allows.

The constant need to throw money into research is killing people in Australia - people are dying because they cannot access cannabis legally.

I rely on the Disability Pension to live. Being quoted \$400 every 5 days for prescription CBD products meant that I was unable to continue with the program and I miss out on the benefits of Cannabis due to the legalities of the situation. Cannabis is a Plant that has been demonised by the legal and Pharmaceutical Systems for far too long. The ACT got it right, and it is time to lift the lid on Cannabis once and for all.

The best way to allow access to Cannabis products is to legalise the plant and allow people to grow their own plants.

Stop flushing money on research that has already been done across the globe and stop persecuting those who want something more than the Pharmaceutical Industry is willing to provide. The Cannabis plant has been used for centuries without the need for research. The human body requires a healthy Endo-cannabinoid System to function

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

I was born prematurely with Arthritis and diagnosed by a Paediatrician at age 6 with joint pain, hormonal and sleep problems, so I have been in pain with this from childhood - In 1991 I was given steroid drugs in childbirth labour which caused me to have to undertake a stomach reconstruction Fundoplication operation 3 years later. During this time I suffered from IBS and Depression and a string of other not so nice symptoms such as early menopause and heavy bleeding which often made me housebound and also impacted on my insomnia and pain management. In 2000 twenty years ago I was diagnosed with D.I.S.H or formally what was known as Foresters Disease - where my spine develops spurs is now welded straight, and spurs grow throughout the body and organs caused through several childhood traumas, genetics, and metabolic syndrome X. I was told by an Arthritic Specialist in 1998 that I would be in a wheel chair by the age of 50, after a long period of insomnia, bought about by not coping with arthritic pain and finally admission to hospital. I had a further diagnosis of Syndrome X and was given treatment for High Blood Pressure, and Type 2 Diabetes . In 2016 after further tests CT scan & MRI by a Neurologist he said it would not be long now til I can't walk and would be in a wheelchair - he offered me steroid injections fortnightly into my spine to assist with the pain. I have had several cancers removed and have just been dealing with cervical cancer so I chose to try CBD instead of a chemical which previously ruined my stomach - so I grow my own plant and cook out the THC's and make it into a brownie which I have a chocolate square size piece half an hour before bed and has finally given me a good night sleep not waking from pain when I turn over and able to get back to sleep mostly. I use water therapies like aqua aerobics, a heated spa pool, wheat packs & hot water bottles every day and low impact dancing for exercise to keep moving and am very vigilant with eating natural and healthy foods everyday to manage my conditions but with out a doubt CBD oil has been the corner stone of my improved health regime, I don't know how I would get through a day without it. So the availability of an all natural CBD oil and the legalisation to support it's growing, and of it's use for medical conditions would be imperative to me moving forward especially when I can no longer make my own and am in a wheelchair which with eventually

happen!

I believe most people that are dealing with serious health issues find it hard to stay employed and sometimes can only work part time or like me not a citizen here with access to benefits/pensions - I have had a lot of financial hardship because of this in my lifetime and believe that financial hardship makes these illnesses worse because of stress - so I would support lower prices for CBD so that ill people can access it without further stress

I believe a licenced growers to produce a stable and unadulterated CBD product and a Doctor's prescription or Pharmacist or qualified licenced Alternative Therapist that can both monitor its use are perhaps the best for public access

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have travelled extensively in recent years and been able to use legal CBD in multiple countries from multiple different small businesses, my experience has been fantastic, it has helped me in many ways and has been incredible for my general well being.

Unfortunately due to the fact that it is not necessarily legal in Australia I've had to seek out bootleg type operations, which have no standards or labels, so you don't really know what is in it, I have in fact experienced a high from one particular bottle, so it clearly had THC in it.

I am not looking for THC, I am looking to have CBD, I am however whole heartedly against restriction to pharmacists and pharmacies, this needs to be able to be produced, imported and or sold by small business in Australia, this will not only keep costs lower it is in the best interest of the public. Big Pharma is not the way to go. I beg you not to head down this path.

lower prices means accessibility

please allow small business to be involved. It's simple, have basic quality standards, eg. must be above a certain percentage of CBD and below a certain percentage of THC. Businesses must be able to supply independent testing certificates if requested. This will also stimulate the economy, more people may be able to set up testing businesses and it will provide jobs to science graduates.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My partner suffers from chronic pain due to reconstructive surgery years ago. CBD would greatly assist him in pain management and mobility

I think higher prices for CBD would cause people to look at illegal sources to purchase it if they knew they could get it cheaper.

I think that CBD should be available without a perscription but still behind the counter in pharmacy's. There should be a clear delineation between using CBD products and people who smoke marijuana for the THC.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer from CPTSD, anxiety and Crohn's disease and have been medicated from age 15 with severe side effects and little recovery from western medicines

At the age of 44 (current age) I have been using non prescribed cbd oil to treat my Crohn's disease for 6 years with life changing results CBD enabled me to totally go off of ALL prescribed pharmacy medications therefore I no longer suffer the horrific side effects I once did

CBD has enabled my mind and body to heal in ways that no other medications had in almost 30 years of struggling with my mental health and my bowel condition

I've now been able to live a happy healthy life, start to finally work and raise my 7 children in a happier more relaxed environment within our home

I think cbd oil and products should be made available to all as I've had zero side effects or negative medical impacts on my life since taking cbd oil

Please listen to the people our lives matter

I'm a single parent with 7 children lower prices will enable me to be healthy while still supporting my children and their financial needs

Over the counter is our best option

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would like to be able to use CBD for IBS and anxiety at a lower cost. Whilst I have more support for option C I would also like to see further government research into CBD's efficacy as a prescribed medication for things like Alzheimer's.

As a full time student a higher price would limit my ability to access CBD. I am also concerned that seniors on the pension and lower-income people will have less access if prices are too high.

I support it being widely available in pharmacies without needing a prescription. My second preference is CBD being available in pharmacies with a prescription, or prescription only for higher doses/no prescription needed for lower doses.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I'm 59 and have Cronhn's disease and have been using CBD oil for 2 years with great success. Since using CBD oil I have no pain and have now been able to live a full life of travelling, going on long walks and enjoying my grand children. CBD oil has really helped my arthritis, now I have no pain nor stiffness.

It would be wonderful if I could buy CBD oil over the counter in Australia like other countries.

A lower price for a quality product is always good, it would help many people and It would benefit me greatly if the price was more affordable.

I feel it should be sold like they sell vitamins in Australia

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Yes my loved ones have used CBD in a safe manner for the treatment of their health and wellbeing. Assisting in everything from major illness to minor pain.

I believe a moderate price that allows access for all but not low enough that it is taken for granted or abused. It is a medicine.

I think we could be using examples from other countries experiences and a more defined outlet. So access to CBD is only focused around the knowledge and support of the medicine.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have spent the last few years on one opioid or another for various reasons (dental, and bursitis mainly). The withdrawal was terrible. I have friends in the states who have had similar situations. They would attest to CBD being a straight replacement in some areas, and made the withdrawal much more bearable. Having the option of using CBD for this and other things readily would be a benefit to all in my humble opinion

Lower prices would obviously mean easier access for more people.

Over the counter like codeine was would be good. I am not sure that logging access as was done with codeine would be necessary.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used CBD and I do not know if any of my family have. But, if they needed to use CBD, I would have no problem. I answered with a tick that I would use CBD in a safe way, but I feel that some people may not. I would like a inexpensive high quality CBD, but prescribed and controlled by a doctor and then the chemist.

I think that Covid-19 will have caused an increase in anxiety, depression and PTSD. The high unemployment rate which has currently been published (and the numbers of jobseekers and jobkeepers not included in the figures) I believe that the majority would not be able to afford a higher price to obtain medicinal help for any disorders they have acquired during this time.

I believe it should be available through prescription by a doctor who has completed the checks and balances for a particular patient. Possibly trained Psychologists may be able to prescribe, I'm not sure about Chemist being able to subscribe.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have headaches regularly and when I tried CBD oil in the USA it made them disappear and not come back. I actually got good nights rest due to it helping relax and calm me.

High price will make it impossible to buy and a lower price will make it affordable for people who are in pain and need it.

Through their Dr or through licenced dealers

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer from severe osteoarthritis. As a 56 year old post menopausal woman, I would like CBD oil available as a pain relief and have already experienced significant benefits on pain reduction and inflammation after 21 days of use of high quality CBD oil. I have monitored the dose on my own using the simple start low and go slow phrase. CBD needs to be widely available especially for women in menopause.

Lower prices would mean that it is widely available and accessible to people who suffer from chronic conditions and who are marginalised through ill health, ethnicity and lower socioeconomic status.

For the public to access CBD receiving the right information about the product, I would suggest CBD becomes available through health food shops and pharmacies as well as natural health practitioners. The TGA could have a brief training program and certification on their website for doctors, pharmacists and natural health practitioners before they plan to educate the public and sell CBD

I would use CBD in a safe way and read the label and warnings.

I have suffered mild back and neck pain for years, and this has caused sleep problems. I recently tried CBD oil in Europe (where it is widely available over the counter) and experienced tremendous improvement without negative side effects.

Lower prices would make it a more reasonable long term alternative to other pain medication. On that basis, I consider the price to be important.

Access should be as simple as possible. My experience with using CBD oil in other countries has taught me that it is a vastly superior alternative to other freely available medication (such as paracetamol and ibuprofen).

I would use CBD in a safe way and read the label and warnings.

I have had crohns from age 19 - I am a young healthy fit male who suffers from a horrible, incurable disease that drastically reduces my quality of life. There are proven studies into the efficacy of CBD for the reduction of pain and inflammation. I have tried 14 different medications and the only one that works without side effects is CBD. My quality of life should not be in the hands of greedy politicians, this is a no brainer.

Low prices would not only help me but many australians who require the use of safe, effective ways to reduce opiod uses.

Widely accessible in chemists.

I would use CBD in a safe way and read the label and warnings.

I believe that anyone should be able to have pain (any) relief. Prescription drugs are proving ineffective and highly addictive, with many side affects. There needs to be an alternative. Many have tried CBD, or similar, and it seems to work. If it works for people that should be test enough.

Obviously if a product is too expensive then it limits its availability to a lot of people, usually it is these people who need it most.

I think it should be available in pharmacies.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil for pain relief and found it very effective. But because of the high cost, I can only use it sporadically when funds allow. This would make CBD affordable for regular and consistent use.

At the moment CBD is expensive and availability is often in short supply. Lower price and regular supply would be beneficial to those who choose to use this.

Access to CBD via a pharmacy or health store would be ideal as long as the cost can be kept as low as possible

I am a permanent resident of Australia, and a Canadian citizen. When I lived in Canada I worked for a cannabis pharmaceutical company [REDACTED]. We were controlled by the federal government of Canada and regularly inspected and audited. Our clients required a prescription that our team would independently verify. We delivered our products by mail-order, there was no physical storefront. Our product came in sealed containers. Our facilities were top of the line, sterile and very organized. We sold premium CBD only strains of dried cannabis for our clients. Many of my clients were very satisfied with our CBD strains. It helped relieve arthritic pain, anxiety, insomnia, and many other conditions. It sold out very quickly, so we when we finally gained approval from the government to begin producing an oil concentrate Mettrum immediately jumped on the opportunity. The oil was even more successful as it was easier for our clients to consume with food or drink. Since moving to Australia I have been hoping to see the medical cannabis industry start to thrive as it has in many countries around the world, and this would be a great first step. CBD has so many benefits that have been proven, and I have listened to countless stories from former clients how it has changed their lives for the better. Australians deserve this medication!

Lower prices would be highly beneficial for those from low-income backgrounds. Australia is currently reeling from the effects of COVID-19 and so many have lost their source of income and are struggling in daily life. Those that are suffering in pain and discomfort on top of this is truly tragic, therefore the price of CBD oil should be accessible for any eligible Australians, not just those with expendable income.

This product should definitely be available in all pharmacies and chemists, but I believe some restrictions should apply for over the counter purchases. However, if a customer has a verified prescription from a doctor then I believe some of these restriction should be not be in place such as the age limit and purchase amount limit.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Wednesday, 20 May 2020 9:08:29 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD safely with remarkable results-stress and migraine relief - I had 3 bottles over a period of approx 6 months with amazing relief no side effects as with pain killers. - I no longer suffer, it helped me resolve my ongoing stress and panic attacks and no longer have use of it. Low cost ready availability is the right of all. For CBD to be fairly priced and not hijacked by the pharmaceutical industry or any other monopoly would be my idea of personal liberty of choice. Thank you.

I am a 70 year old woman - I rent and rely now solely on the pension. I am happy, healthy and having free access to CBD at realistic prices is a right for all Australians without the medical and pharmaceuticals having the monopoly over my choices.

Health food shops - alternate practitioners - chemists -

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I think society over uses over the counter and prescribed medicines such as anti-depressants, and pain killers, and the negative side affects, and reliance, have been well reported. I see high quality CBD as a safer alternative; it is a natural medicine and has been shown to have little to no side affects. I also believe it should be freely available as is Codeine and Ibuprofen. Both of which I have little belief in their safety.

Price is extremely important; I don't believe effective, particularly natural, medicines should be reserved for the wealthy. My understanding is that CBD cannot be patented because it is naturally derived, so the price should not be high.

I believe CBD should be accessed as easily as Paracetamol currently is.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

As CBD is derived from natural sources it should be readily available without the restrictions that are placed on prescription medication. Also as it is not a lab made drug it would have far less negative reactions/side effects. I would be sceptical of buying it only through pharmacies as a prescription medication as it possibly would be mixed with other drugs and not be 100% plant derived. Every single lab made drug has serious side effects but these are still allowed to be prescribed without question and in a lot of cases without consent.

As this product can be readily grown there is no reason for the the price to be excessive so that it is available for anyone. The pharmaceutical industry is all about profit so they would ensure they are making a good share from the sales. Therefore it should be available through other avenues and not just pharmacies.

Although natural health is not widely recognised by the pharmaceutical and medical industries I consider the natural health practitioners have far more knowledge of natural substances - including CBD. Therefore it should be readily available through other avenues and not just pharmacies/doctors.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As an Australian, my loved ones don't have access to legal CBD medicinal products unless they can go through the incredibly stringent pharmaceutical prescription methods, but I also have loved ones overseas in the USA and the UK who DO have access to such medicines, which they use to help alleviate the symptoms of a variety of illnesses.

My mother experiences chronic pain as a result of a car accident for which she is required to use heavy duty prescription pain meds such as codeine and tramadol. Naturally, she does not want to use these pain meds as they can be addictive, and would be much better suited if something like CBD was readily available to help alleviate those symptoms. Additionally, she suffers insomnia for which she takes prescription sleeping tablets, but they last a long time in her system which makes mornings a struggle so she has to work out when she can and cannot afford to take her sleeping tablets. If CBD products would help in getting her a restful sleep with fewer side effects, it would be wonderful assistance in letting her live her life with fewer prescription medications.

My partner and I both suffer from anxiety and stress which would be greatly assisted by being able to access CBD products. My partner's sister suffers terribly from IBS which has no discernible trigger, so having products that could help with the pain in the instance of a flare up would also be a great help. She's 21 and shouldn't have to live her life in pain and discomfort.

The price is massively important for Australians. Many people suffering from chronic illnesses also struggle finding and keeping work, which means that if the price was too high, it would be prohibitive for them, myself and my loved ones included. Lower prices and ready availability would ensure accessibility for all Australians, and would likely mean that in those cases where CBD products

significantly improve peoples' quality of life, they would be able to access things like work and education which were previously avenues not open to them as a result of their illnesses.

N/A

I know of the current prices and they are way too high.

I have traveled in America and Europe where not only CBD is legal but THC is as well. It is absolutely ridiculous how backwards we are. I don't think this goes far enough, we need to pull our heads out of the sand and legalize the entire plant.

A lower price would enable those in need (people undergoing chemotherapy for instance) to be able to use CBD to improve their quality of life without compounding further financial burden onto their already strained situation. Reduced stress would only lead to better health outcomes for patients and in turn, a reduced requirement for medical resources over time.

My family and friends all have conditions which we believe could be helped by this treatment. I believe we should continue research but I do not believe there are downsides or dangers such that we should prevent individuals making the choice to take these treatments at this time.

There is no reason for this treatment should not be available at a low and affordable rate.

I do not have the expertise to advise the best way to make this available. Pharmacies distribute a range of medicine at affordable rates so... However we do that? Let's do that.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I have many friends that have used CBD oil at massive costs - I see the results for myself and know 100% it is helping them. Something that helps should not be expensive or illegal

Price is always important, so of course is safety. A balance between the two. Anecdotal evidence should be included and noted that it is such. Many individual cases together create a powerful reason to have it readily available

CBD oil info and feedback website for people to monitor their progress and for others to see their individual results (names kept private)
Questionnaire to the patient why they want to use it and what research they have made
Signing that they are responsible for their own health choices

I think CBD should be reasonably priced. The Australian government should learn from states in the USA and see what their prices are. So far with the current medicinal cbd oil available for cancer patients is way overpriced. They should also lower that.

Pharmacy. Or online if it's recreational.

I would use CBD in a safe way and read the label and warnings.

I use CBD to treat mild anxiety, period pain and occasional sleeplessness. I have found that CBD has improved my PMS symptoms greatly over time, and it also works almost instantly for pain & anxiety. I have NOT found the product to be addictive or have any negative side effects.

I think price accessibility is important. It should not only be the wealthy sick people who are able to access this medicine, everyone should.

I think that health food stores and places like the Happy Herb Shop should be able product to sell this product to adults who have made the choice that this is the kind of medicine that they want or need.

I have struggled with Fibromyalgia for 6 years.

I have been on countless medications to help reduce pain and not be so fatigued, so I can try to lead a normal life.

I tried CBD i was able to obtain through a friend, and within a day i felt much better.

I slept well, i had no restless legs, my pain was reduced and I was able to be normal.

I couldnt afford to keep getting it, so instead started smoking marijuana at night. Id like to reduce my dependency on smoking marijuana to get the CBD benefits and continue leading a much normal life, legally.

Lower price is beneficial for all Australians, not just myself.

Medications that help reduce symptoms should be available to all, its a human right

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Wednesday, 20 May 2020 9:07:52 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Long term sufferer from PTSD I was on a basket of psychiatrist prescribed sedatives. CBD oil once a fortnight or so gives calm that keeps me functional.

Wider access and decreases people going for illicit avenues

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Health professional

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

People in lower socio-economic situations should be able to access the same products available to the affluent. It is a basic human right.

As it is THC free, virtually, it should be widely available in supermarkets and health food stores

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am using CBD to help with pain. Obtained from a source where practitioners have knowledge of its use and work with the customer. It has helped me a lot. I have polymyalgia rheumatica.

I cannot afford to obtain this product via my GP because it would be too expensive. I am able to obtain it from a reliable source at a reasonable cost.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I would use CBD in a safe way and read the label and warnings.

Once available, my girlfriend and I will experiment with it's potential for reducing anxiety and stress, and improving sleep. My father also suffers from arthritis in his hands and is interested in it's use for pain relief.

A high price wouldn't affect me. However while I personally believe that quality products are worthy of a higher price, cannabis is so easy to grow that it doesn't seem reasonable for one of its derivatives to have a high premium.

I believe procuring it at a pharmacy is a reasonable way to go - prescriptions require access to a GP in the know, and many do not appear to eager to learn about these types of therapies.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I know someone who has used cbd oil successfully for ptsd symptoms. I have used it myself for a mild anxiety and for a more restful sleep. The product I have been using is only available on the black market. This does not sit well with me, as I am usually a law abiding citizen. I would to see CBD oil being sold alongside the other herbal medicines and vitamins in a chemist shop

I would use CBD in a safe way and read the label and warnings.

I have spoken to numerous patients who have used CBD oil and has helped in many different ways - and the change in their conditions are shown as a result of the CBD oil. All the reports I have heard over the years have been very positive.

I don't believe the price should be high, but affordable for Australians. Like all medications, they should be affordable, especially now with a probable financial depression/crisis presenting in the next few years.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a loved one who is in constant mild chronic pain. He also suffers from anxiety and stress, and is aware of all of these symptoms. He puts in his best efforts with both physical rehabilitation in terms of exercise and diet as well as mental/emotional rehab. However, this pain/anxiety/stress has persisted for many years now and is only getting worse despite his/our best efforts.

After the discovery of CBD oil as a potential therapy he was very enthusiastic and hopeful (as were we) about trying the remedy. However the recommendation came from overseas (UK, Canada) where it is available over the counter. Then after intensive research and pursuing of the treatment it proved almost impossible in Australia. We know that CBD oil could be a life-changing treatment for him and by extension our family and thus are hopeful that it may be easily available in Australia soon.

We are not drastically effected by prices of CBD oil as we are in a financially stable position and have already tried many (expensive) options for therapy. As far as the Australian public is concerned I believe the potential for CBD oil to help (even if only a little) many Australians is understated, and making it affordable for all Australians should be considered. However, I think a rapid entry to the market would be more preferable (still with ease of access).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am a nutritionist and see many clients who would benefit from using CBD safely. It has been shown to be useful for women going through menopause, to assist with mood changes and insomnia, for people with mild anxiety to bring focus and awareness to their mood, for patients with difficulties initiating or maintaining sleep, and for patients with mild to moderate pain and to alleviate nausea. Thank you for seeking my opinion. May you make a wise choice.

The price of CBD is generally high, in countries and states where it is legal. However, many Australians could benefit from using CBD who may not have a high income, therefore a lower price would be preferable.

Regulated pharmacies such as in the US. Prescription by pharmacists, doctors and complementary medicine practitioners. Online ordering with prescription from practitioner.

I would use CBD in a safe way and read the label and warnings.

CBD is currently available and widely used illegally without pharmacy advice, but with peer advice. Laws should represent the needs of the population. CBD should be easily available.

Lower prices = increased access for people on low incomes. People on low incomes experience lower quality health, thus need it the most.

Widely available through pharmacies or health food stores.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

My first experience with CBD oil was when I used it for my dog with severe anxiety issues. Throughout her lifetime she would be triggered into an anxiety attack by not only a storm, but also loud bangs or vibrations when traveling in the car. As she was getting older it gradually got worse to the point of her having almost daily attacks without any known trigger. That's when I sourced a cbd oil for her from the US. The difference in her was remarkable and almost immediate. It's been also lasting after we stopped the medication (that was almost two years ago). As I personally suffer from anxiety attacks I would love to be able to use cbd oil myself.

I would use CBD in a safe way and read the label and warnings.

I do not suffer physical pain at this stage in my life. I treat a lot of people in pain and who self medicate. I know quite a number of adults ranging from late teens to their 80's that want to utilise the medicine to relieve their suffering or physical pain and mild insomnia.

It is important that people who commonly suffer stress and physical pain have reasonable access to therapeutic medicines that allow some recuperation and/or relief, otherwise gateway drugs, as well as heavier pharmaceutical, and cocktails of pharmacy & alcohol become the crutches for perceived pain.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD Oil for anxiety, stress, sleep and menstrual disorders. It was fabulous. I helped immensely and without it I definitely have the menstrual issues back and lesser quality of sleep and anxious feelings back.

Price should be low so as lower income people can afford it but also the quality of the oil should be high.

The best places for public to access it would be through chemists and healthfood stores.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My son suffers from chronic anxiety and has attempted suicide. He has been in his room for 18 months unable to work or go to school..He has had psychiatric care for 2 years. He has been taking CBD oil under medical supervision for 4 weeks. Within 3 days his anxiety levels decreased significantly and he is reconnecting with friends and family and was able to go for a job interview. Antidepressants did not help my son. This is the first medicine that has had an impact on his wellbeing.

It is expensive. Making it affordable will change many lives and I would not have to rely on extended family to help me give my son CBD oil.

It is working for my son to get a prescription after consultation with his GP and following up on efficacy and dosage because then titration can be medically managed.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been on high dose morphine for years, and the only time I have been able to sleep through the night is with the occasional use of illegal cannabis. I don't like using it because it is illegal, but I have proven it works. I should not have to feel like a criminal for trying to get out of pain and live with some sort of normality. The morphine I take is like watered down heroin. Cannabis is natural. You tell me what I should do honestly without bringing the law or politics into the equation.

I'm a pensioner.

At a pharmacy.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

I have been using these medicines for many years, to help with migraines, hyperactivity, anxiety, and sleep disorders

It needs to be made at a reasonable price that people can afford, the current prices make it hard for any low to mid class citizen to afford and maintain

To be able to make it themselves would be the ultimate way, therefore it would be exactly what they need for them, and they know exactly what is going into their body

Only publish my submission on the TGA website, do not publish my name or any other information about me.

A family friend uses cbd oil for pain and her terminal medical condition and has seen benefits from the oil. I have also seen many people looking for it to relieve minor medical conditions and they are not looking for a (nonexistent) high

It should be on par with other pain relief. Like between 15-20\$ for 5mls (depending on dose and strength) it should not be overly pricey but enough

I like the hybrid approach but still feel like a pharmacy or pharmacist only approach would be best, especially until research is further along

Only publish my submission on the TGA website with confidential information redacted. Do not mention the part about my family friend etc (my reasoning)

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Chronic ongoing pain that DMARDS cause me major side effects. Tried overseas and it helped me immensely. Better than taking opioids for chronic pain.

From the clinical studies I have read from overseas this could help many people who can't work due to illness, therefore not the available funds to purchase.

I still believe that it should be controlled therefore available in pharmacies but without the dispensing fees. Schedule 3.

I am a 73 year old woman with inflammatory arthritis, PSA and Fibromyalgia. I am always in pain and have very limited mobility. I take Curcumin supps as well as a variety of natural herbal medicines to try and minimise the effects of the above mentioned disorders. I also have great difficulty getting to sleep each night and it is usually after 2am-3am before I finally drip off. As I am retired (Naturopath) now I am able to sleep in and try to catch up on some much needed sleep. I also have Psoriasis with periodical flare-ups.

CBD needs to be affordable for elderly people in particular as they (I) am on a govt pension as my only source of income.

My 82 year old grandfather has a crushed vertebrae from an old skiing accident. As a result he has chronic pain in his back and cannot walk for very long.

He has been perscribed Endone by his GP but doesn't like it because it makes him - in his words - "off with the fairies".

He has told me on numerous occasions that he'd like to try CBD oil but unfortunately it's not available without a prescription, and his doctors think Opioids are better pain relief.

My grandfather is on the aged pension, but lives frugally and manages to make it work - in fact he even saves a little each week.

Price is not as important as availability for him, but any sort of saving would be appreciated.

Over the counter for adults, limited doses if need be.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I would use CBD in a safe way and read the label and warnings.

Based on personal research and testimonials from friends overseas where CBD is available over the counter, I would like to have access to it in Australia for the general health benefits including aiding the body maintain homeostasis, reducing stress and anxiety, improving quality of sleep. CBD is a non-psychoactive and doesn't have any adverse health effects when consumed/used in reasonable quantities so I would like it to be available like any other supplement. When it comes to CBD availability, Australia is a little behind the curve when compared to other countries around the world where it is available over the counter.

Being a pensioner I would like to have access to affordable CBD supplements that compete with or perform better price wise to CBD available overseas. Overall, I think CBD would offer many health benefits for most people and as such would like to see it priced to make it affordable for the majority.

Over the counter at all pharmacies just like any other health supplement

Myself and many of my friends and family have been and are using CBD regularly.

We have found it to give fantastic results. I personally have seen relief of mild pain from an accident many years ago, improved sleep, better moods and a fantastic reduction in stress and anxiety.

We all know that it is not a drug and should be removed from the dangerous drugs list immediately.

The only frightening part is if we go ahead with option A, there is no need for this amazing product of nature to be restricted to Pharmacists and big pharmaceutical companies, this will simply make the rich richer and I don't believe they have our best interests at heart.

Allowing small business to be involved will also have a positive impact on the economy and community.

There are so many passionate people out there in Australia that want to be involved in this sector.

I can only hope the right decision is made as soon as possible.

Higher prices will price people out of the market that may truly need it

We need to have a blanket set of standards in Australia that allows small business to be involved.

Having product quality and labelling standards keeps cowboys out but

allows passionate small business to be involved.

I cannot stress how important it is that CBD is NOT restricted to Big Pharma and big business

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

It would make a huge difference to my sleeping patterns. I have glaucoma in one eye - sleep is so important for this ailment - proper restful sleep eliminates the pain in that eye the next day which obviously makes it more comfortable and less irritated. This would also reduce my anxiety levels as when I have the eye pain, I worry about the pressure level going up. I also have mild degenerative problems in my hip - pain-killers are part of my life some days. I cannot understand why a product like this which has been proven to be beneficial is so difficult to buy legally. It has always been available from dubious sources and is available on-line but I much prefer to know what I am buying and using when it comes to medicine.

There is very well informed young(ish) specialist who has studied the effects and benefits of this oil for glaucoma sufferers - he is to have a video presentation on the Glaucoma Support Group site which I have joined and follow. I am really interested to watch this - perhaps some of his knowledge and input could be looked at by the TGA people. Who knows ? some people involved in this Association may themselves be afflicted with glaucoma one day and may be desperate for a safe and secure treatment to help them. I am 75 years old - always thought this eye disease was an age related disease but I now know that it is not - anyone of any age can be affected, and let's face it - why should our eye sight be any less significant than many other diseases for which treatments have been approved - we should be able to have access to a product that will reduce the possibility of blindness

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My partner also has been taking the Very Expensive prescription cbd and later the based products.

Full Spectrum is the thing that really worked for her extensive injuries and pain.

CBD alone certainly seemed to help with reducing painkillers and general wellbeing and mood.

At the moment all cannabis prescriptions / sales are a rort. The government and big business are making way too much money, Mostly just onselling Canadian and USA, Swiss made CBD and cannabis products.

Full spectrum plant extracts are proven to be of higher efficacy in overseas studies.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have ongoing shoulder pain from a dislocation a few years ago. I would much prefer Cbd medication then the current standard. I have used small amounts of Cbd while on holiday in America, I found oils and balms to be effective in helping reduce pain.

My girlfriend has alot of trouble getting to sleep and I believe this will help her

Price is obviously important as it's related to accessibility. Too low of a price may cause misuse although it must be cheap so everyone has the option to use it.

I believe it should be available at pharmacies and online, data can be obtained from pharmacy's on the amount and frequency of use and also customer feedback.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for nothing at this time.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I would like to see a lot of medications delegated to pharmacist only meds. In Europe, Nystatin in powder and tablet form, and Itraconazole are available without a doctor's prescription. I am sure other people would know of other meds. It would save doctor time and waiting room visits.

I think prices should be high. PBS only if approved by a prescription from a doctor.

I want to access Nystatin as a podiatrist. Give Podiatrists limited prescribing rights. If you are going to give access to CBD to anybody.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I personally do not need CBD although I do have post herpetic neuralgia which is managed in other ways at the moment. This may change and I believe from reports from friends in other countries that this is a safe and effective analgesic. For some time now (years) there have been reports of its effectiveness for conditions such as childhood epilepsy and the lack of availability for these people. It appears that people are suffering needlessly due to a very conservative approach in Australia compared with other countries such as the US where I have a friend aged in her 70's who takes it for arthritis. pain. She was unable to take it while visiting Australia recently.

Lower prices are always desirable particularly for aged pensioners who are more likely to suffer from painful conditions provided the quality is controlled and the medication can be sourced from a reliable provider.

The best access would be through a pharmacy or from an allied health professional, herbalist, or naturopath, but over the counter at the pharmacy as apposed to requiring the permission of a pharmacist but the pharmacist can provide advice as to its use and management.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I have personally known 3 people who have used cbd oil for pain and the stress and tension that comes with the ailment. There only lament was the high cost and the procurement of, cbd oil! All were happy with the result as opposed to taking more tablets.

Because pain doesn't discriminate between rich and poor, I believe it should be made available at a reasonable cost for those it would benefit

I personally know of people who have travelled long distances to obtain cbd for there loved ones. There is enough stress involved in having certain conditions without having to jump through hoops and find money just to manage a level of comfort ability. I believe health professionals should be able to prescribe it and therefore monitor and control dose so that it is not open to abuse!

I would use CBD in a safe way and read the label and warnings.

Australia is behind the times, CBD has proven to be a huge success in other countries around the world, with positive impacts not only to peoples health but also to the economy.

At the moment through the special access scheme, CBD is costing people outrageous amounts, for small doses. How is it fair to charge people thousands of dollars a month for something that is changing their life for the better. Not to mention that accessing through the SAS is incredibly difficult, and only available for terminal patients. Why?? So many other patients suffering acute or chronically each day could have their lives changed drastically, for a much lower cost.

The cost of CBD needs to be lowered. Access to CBD needs to be much much easier, and for the benefit of all people. Our medical industry needs to be better educated on CBD so they are more comfortable suggesting it, instead of forcing patients to take mass produced pharmaceuticals with horrible side affects, for the benefit of big-pharma.

Wake up Australia, its time for change.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

Medications that assist in a variety of ways should be available for all incomes. CBD oil could assist people with back pain, IBS, anxiety and fibromyalgia return to the workforce.

Even if it's a behind the counter medication, it needs to be available at a reasonable price point to assist more Australians. This is a very important medication that can assist so many people with such a wide variety of issues. More than ever we need more medications that assist with anxiety that don't have as severe side effects as anti-depressants/anti-anxiety medications.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have degenerative disc disease and arthritis in my hip and lower back and do not like taking medicines which effect your internal organs such as codeine for long periods of time. I refrain from using the medicine that I am prescribed unless I'm in a great deal of pain and I am open to trying other natural medicines like cbd for my condition. I have read that cbd is really helpful in reducing inflammation and anxiety symptoms in people and wish to be able to access this medicine without being afraid that I will get into trouble because I am breaking any laws. I have not used cbd before but I would really like to try and see if it is effective in helping me to manage my pain and anxiety.

If the price is too high then I cannot access the medicine. The price is important for Australians because the people that need it will have to be able to afford it

Please allow our citizens to access this medicine which has been shown to have no side effects and can be helpful in the management of chronic pain conditions because it will be of greater benefit than pharmaceutical drugs that have so many side effects that are harmful to people.

Only publish my submission on the TGA website with confidential information redacted. Just my personal information such as name and email address

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe that CBD oil is safe to use at recommended doses. I know of many people who found it effective in pain and stress relieve and see it as a good alternative to pharmaceutical options. I have not needed any myself, nor do I take any pharmaceutical medication.

CBD oil is a natural non patentable product which can be produced and distributed at low cost for the benefit of all.

Due to its safety profile I believe it should be freely available in general stores, just like S4 medications.

Only publish my submission on the TGA website with confidential information redacted. Name or contacts

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer from constant low back pain from a fall from a horse 50 years ago. Over the counter or pharmacy only pain medication no longer works and I now get other problems like acid reflux and abdominal pain. I believe CBD will be more beneficial with no side effects.

Only publish my submission on the TGA website with confidential information redacted.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD in the past when I was younger due to pain and since I stopped being able to access it I developed an opioid addiction and now I am stuck on subutex, valium and Lyrica as my pain symptoms then went out of control and these opioid drugs made my pain worse. If only I had been able to keep using CBD in the past when I had access to it my symptoms were mild back then and now it is far worse due to the awful medications

Lower prices means it is accessible to everyone regardless of their socio-economic status. It would be unethical for it not to be affordable to everyone.

It should be sold in pharmacies and potentially at tabaconists.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

It needs to be affordable so many people have access
No age limit as only CBD

There is enough research
CBD alone does not get you high so should be available for all ages as an alternative therapy especially for children to try before having to go on pharmaceutical drugs

I have ibs flare ups that cause a lot of pain, restrict my life and cause insomnia. This leads to more sugar and carb cravings because of tiredness and tiredness increases anxiety and impacts productivity and general happiness. having to take medications which are expensive over time and sometimes antibiotics can add up, and I would rather take a natural product that can help with both ibs and associated issues.

I would use CBD in a safe way and read the label and warnings.

I have used CBD in overseas jurisdictions where it is legal and available. It was an absolute 'miracle' in its effectiveness to alleviate stress, anxiety and pain relief. It promoted such good wellbeing that others around me noticed and picked up on my improved mood, leading to wider benefits beyond myself.

There is an obvious black market for CBD products in Australia. If priced incorrectly (too high) people will continue to use the black market to purchase such products. In saying that, people are likely more willing to buy more expensive CBD products if they are conveniently available, in reliable measured doses with clear packaging information.

It could work best as topical ointments or oral doses, similar to other medications. It should be sold at readily available pharmacies, or specialised (licenced) outlets who focus specifically on the sale of CBD products. Considering CBD does not get you "high" the public should have ready access to CBD products and they can be sold alongside other common ameliorants.

Australia is behind the eight ball. Both the US and UK have legalised CBD for general use and it's time we caught up. CBD has the potential to truly benefit society, in particular to be an alternative natural solution to help with anxiety which is so prevalent among young males.

Now more than ever do Australians need access to high quality cbd at a low cost. COVID-19 has effected us all and therefore am asking for you to open the market to allow competition.

The TGA should provide the regulations for it to be legalised and then allow Australians to purchase to from where ever eg. over the counter or online. US and UK have creditable company willing to ship to Australia.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

My sister has been suffering from alot of pains in her body for about 4 years now. Im hoping that CBD will help alleviate the pain.

If the CBD is too expensive people that do not have the same financial stability as others may not be able to access CBD.

The best way to access CBD is through their local chemist. If it were available in any supermarket it could lead to people misusing CBS.

I would use CBD in a safe way and read the label and warnings.

At present I use a pharmacy compounded CBD oil that was prescribed by my psychiatrist for sleep, anxiety and well being. The small bottle (60ml) at 20mg/ml cost me \$300. I am a single mother of three on a disability pension and this cost is far too high. There are no rebates from private health insurance or PBS subsidies. This cost is absolutely ridiculous. Even the pharmacist who makes it up (Alfred Hospital) stated that the price is far too high.

It's not accessible for all Australians due to the high prices.

Just make it more available at a reasonable price please.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I used CBD in California for sleeping issues, anxiety, and pain and was able to reduce the dose by more than 50 percent of addictive sleeping, anxiety, and pain medication I am prescribed currently for these conditions simply due to the amazing effect of CBD oil, I also got no side effects from the CBD like I do from the current medications I am on. It also helped with IBS caused by these medications.

Lower prices would mean I could have access to this amazing natural product without having to sacrifice money for other essential products and services I use. A natural and side effect free option like CBD oil would be extremely important for all the Australian people currently on stronger and potentially more dangerous medications for pain, anxiety, sleep, and other conditions CBD can treat safely and effectively.

It should be allowed to be sold by any store or provider that is currently allowed to sell any OTC medications (eg paracetamol, ibuprofen), any health supplement (eg vitamins, minerals, herbal remedies), and anywhere allowed to sell alcohol or cigarettes as it is far safer than OTC medications, alcohol, and cigarettes, and is no more risky than any vitamin, mineral, and herbal supplement which all have the potential for very minor side effects.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

My wife uses cbd oil on a regular basis and has done for approx 2 years. She has MS, cluster headaches, migranes and ptsd. She decided to try to come off the oil last October and almost immediatly had her Ptsd symptoms back. She restarted her oil and had to increase her traditional medication. She is now back to 'normal' and in fact has decreased her serotonin and stopped her risperidon. On a side note she has had cluster migranes not stop since January this year and it has ranged from 2-10 on a pain scale. The only pain relief that worked was natural THC either smoked or cooked along with sumatriptan. This has worked in regards to now stopping the cluster migranes and she no longer takes the medice or THC in any way.

Higher prces would affect our budget obviosly but it would not stop us buying the CBD oil as my wife is roof inthe pudding of it working for her. It should be made avaolable for all Australians and the stigma should be removed as in the UK where it is widley available. I would recommend that the government makes all suppliers label their producton a universal scale so as the public can compare like for like.

For the public to access the CBD it should be made available everywher (like the UK model), and not specialist shops that drive the price up.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The only impact on myself would be the fact that I have a choice to try the product at a reasonable price if there is some competition in the marketplace. I believe natural products derived from plants should be available to all Australians for health and general wellbeing. None of my loved ones have tried this product as it has been too expensive and not readily accessible.. I only know of one person who has tried it who had brain cancer and it is advised that I avoid this reference. so I am unable to comment further.

I believe higher prices would affect my ability to purchase as I am on a pension. My reasoning for wanting a cheaper product is that most of my friends and family are on a pension and I know of many who would like to try it for health and general wellbeing but just can't possibly afford it.

I believe it should be available over the counter at health food shops.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

It was very effective as an anti inflammatory and helped with mild arthritis

This should be a lower priced item as it should be available at a fair price over the counter. Many older people with inflammatory issues should be able to access it at a price they can afford. Other anti inflammatory medications can cause stomach ulcers and are not good to take for extended periods of time. CBD oil does not have these negative effects.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I have Cystic Fibrosis and while I haven't used medicinal or supplemental CBD, I have in the past (decades ago) used marijuana and had it greatly benefit my lung health. I personally would like to use CBD to inhale so it is directly delivered into my inflamed lungs. I have been wanting to do this for a long time but now that I am older, with a family and not wanting the psychoactive effects of THC, and for legality reasons, I have been reluctant to use it. Or I am just waiting for my health to drop to a level that would warrant the risk. I have no doubt that CBD contributed to my increased lung capacity and health all those years ago. I also genuinely believe that it contributed to a stabilising of my health and so has got me to age 40 without having a lung transplant.

With all the medicines and vitamin supplements I am already paying for, higher costs would be prohibitory for me. And due to the nature of the NDIS I don't receive supplemented prescription costs. Lower costs would mean I could fit it into my current treatment schedule. At the same time I don't want the quality to be put at risk due to too low prices.

There are strains of cannabis plant that have under 1% THC and 20% CBD content. It would be my preference to have the right to purchase the plant itself for inhalation purposes. I understand the dosage risks associated with this, however I feel that most of the general public would not choose this method. I also would prefer not to have to see a doctor for such a product. And while I would be happy with it being available only in chemists or the like, I would caution against having to justify access to a pharmacist also. Behind the counter but no questions asked? Or right out front next to the antihistamines? I think if you took too many antihistamines vs too much CBD? I am sure it is safe to say that the CBD is far safer than most products already on the shelf.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

No one i know has used the CBD extract, however, i have looked into the results internationally and the results are extremely positive. It makes no sense for this to be unavailable to the public at this point. Its borderline criminal that the health and well being of our society is a political issue.

The fact Australia wants to be a leading exporter of medicinal CBD right now whilst it is still highly restricted in our own societies, proves we are confident in our capacity to produce export level production. Coupled with the absurd space in a beautiful country, we have the capacity to grow and provide high quality and quantity of plant and CBD extract for the people of the wonderful nation.

It should be over the counter. How ridiculous is it that something non-toxic and non-damaging to the body should be regulated and/or prescribed, It should be like a daily vitamin if anything.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As someone treated for ADHD side effects of the stimulant medications can include difficulty maintaining a healthy diet due to nausea and occasional difficulties with restful sleep.

While I have not tried CBD I have followed research and news from the USA and Canada and it seems that CBD is potentially effective at suppressing nausea, increasing appetite, and promoting restful sleep without significant side effects or cognitive impairment. Currently available medication I have tried to address these issues have serious side effects and in some cases can be quite dangerous, as such I no longer use them and am often faced with a choice of taking medication to treat adhd (which untreated seriously impacts my quality of life) or skipping medication to avoid side effects.

I also experience IBS and there are essentially no available medication with treatment being centred around a highly restrictive low-fodmap diet which may have negative long term effects. This leaves me unable to enjoy many activities centered around food without substantial preparation. There are some indications that CBD may provide effective relief of symptoms which may enhance my quality of life around holidays and such where the communal enjoyment of traditional food is a large factor.

Current economic conditions obviously aren't great. The cost of living is quite high, it seems like CBD has the potential to improve the quality of life of people with certain difficult to treat moderate conditions. High prices are likely to prevent people trying treatment options and prolong suffering

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

We tried CBD for our son under our physicians guidance, it worked wonders on his ability to use verbal speech, ability to self regulate and keep his anxiety manageable. Sadly with it being such a restricted product it was hard to get and very costly to keep up his dose so we had to discontinue use of this product. I would love to see CBD more readily available at a more affordable price point. I feel that this product works well in conjunction with more typical therapies and provides a holistic approach that can genuinely improve lives.

Lower prices would enable us to use this product in a therapeutic way, instead of just being able to purchase it when we have the additional income to afford it.

I think a dispensary style system would be a good option, it gives greater access to wider strains of hemp CBD which could be better tailored to your ailment and end use goals. It would also mean lower prices for the product as well as greater availability. The WHO has declared CBD to be a safe, non psychoactive dietary supplement, it really is time to decriminalise it and unrestrict peoples access to it.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD for pain and anxiety and it works very effectively and there are no horrible side effects that can occur with pharmaceuticals.

I feel CBD and all medicines should be a fair price that all people can afford comfortably.

Widespread availability would be best, at Pharmacies, Health Food shops. and Health Clinics.

I would use CBD in a safe way and read the label and warnings.

I have never used CBD, but am interested in trying it for period pain. I'd like to replace or reduce the opiate pain medication I use for my dysmenorrhoea. For my loved ones who suffer with poor sleep quality and anxiety, I'd like them to have access to a high quality natural remedy they haven't tried before, as the available ones are not effective, and prescription medication is too strong or addictive.

Lower prices, easy access and a competitive market are always better for the consumer.

I would use CBD in a safe way and read the label and warnings.

If my Dad could get this stuff he would be free of knee pain. I would be able to sleep every night and not suffer anxiety. My Mum would be free of 50years of restless leg syndrome. My friend Sal wouldnt have to take so much anti-seizure medicine (she had a stroke and is half paralysed and her leg won't stop shaking up and down if she doesn't have that medicine but her leg stops shaking is she had a marijuana cookie.. My friend Linda who was on psyche drugs for anxiety wouldn't have to take her own illegally made CBD, she could get it from the chemist and not feel guilty.

If the price is too high it will stay in a black market.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

Not for me personally, but I would imagine it would be very important for low SES people having access to anxiety and pain relief. Many potential positive health and wellbeing outcomes for disadvantaged Australians

Do not publish my name or my submission on the TGA website.

I would use CBD in a safe way and read the label and warnings.

My understanding is the CBD oil has proven to be beneficial in a number of situations, from pain management, anxiety, ADHD, Parkinson's and more. I believe that each case is different and individuals will respond differently, some may need a higher dose others lower to achieve the desired results. My understanding is that any side effects are far less than pharmaceutical drugs used to treat these same conditions and it has not been proven to have any withdrawal type side effects if stopping. Much research has been done. Has any of this uncovered significant risks/dangers that are greater than the risks of any other drug currently prescribed or generally available?

I think the price of any medication is a concern. So many drugs are very expensive and the pharmaceutical companies make great profits and also benefit greatly also when a government subsidises the cost or promotes mandatory medicines such as vaccines. What is the true cost of production and a reasonable price to pay - health should be affordable for everyone not just the wealthy.

I have no concerns with CBD being made available freely - the focus should be on quality of product and production.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I take prescribed pharmaceuticals to help manage pain and inflammation due to a chronic autoimmune disease. I'm starting to experience side effects of these pharmaceuticals including loss of bone density which has caused osteopenia (I'm a 38 year old male). If I remain on my current pharmaceuticals, my doctors have warned me that I will be at elevated risk of suffering from osteoporosis and liver/kidney damage. However, there is currently no alternative medications available to me. As I experience low-level pain and inflammation most of the time (outside of more serious flare-ups), I would like to try CBD as a more natural alternative to managing pain and inflammation, potentially without the side effects of my currently prescribed pharmaceuticals.

I believe CBD should be available to all, not only people who can afford to pay inflated prices for it.

I believe CBD should be accessible over-the-counter at pharmacies.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I would use CBD in a safe way and read the label and warnings.

I have found CBD to be useful in mild pain management, and minor stress, anxiety, irritability and sleep issues.

Given the current situation a more affordable/lower price would be favourable.

It should be made more easily accessible to those who may benefit from its use, given that there is ample research on safety and efficacy.

I already have a prescription for cbd and its terribly expensive. Its so much cheaper to purchase cannabis. I don't want children to have easy access to cannabis so it makes perfect sense to make cbd readily available for adults over the counter

One month supply of cbd is the same as buying an ounce of cannabis. It's not cost effective for the consumer. If you are using cannabis for medicinal purposes then one ounce should last months. So, cbd needs to be much cheaper. I simply can't afford to fill my script for my issues

None

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

It needs to be made affordable for all Australians as a lot of old age pensioners would use it they had the option and they need to be able to afford on their pension

I believe a certified herbalist /naturopath should be able to sell and prescribe

Only publish my submission on the TGA website with confidential information redacted. Surname, phone number and Email address

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would like to have the free choice to be able to buy CBD at a price I can afford whenever I feel it would suit my needs. I have arthritis pain which I feel may be eased with taking CBD. My husband has a lot of pain and stress so it would be wonderful for him to be able to afford to take CBD medications.

Lower prices of high quality would allow me and my husband more easy access to CBD

Parmacies, health care professionals and health food shops would be good places to be able to buy CBD.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild anxiety, help with restful sleep.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

My experience with CBD oil is that it is a great alternative to something like Temazepam. For me, it has the same feeling of relaxing your mind and body, allowing for a restful sleep. I struggle to sleep next to my partner due to ambient noises (heavy breathing/cars/trains/city noise), and we had slept apart for about a month before I tried CBD oil. After one night having 5 drops of CBD oil, I had the best sleep I'd had in months, and the effect lasted another month after that. It allowed my sleep hygiene to improve to the point where I could sleep much better. I didn't have the day-after agitation side-effects that I get from Temazepam either.

My partner also had 5 drops one night after grazing his knee pretty badly - he was in a lot of pain, and 5 drops helped him relax and fall asleep.

I would not use it everynight, because I want my body to not become reliant on it, but it is great to know I have an alternative to getting blind drunk on alcohol, in order to get to sleep.

Higher or lower prices wouldn't really affect me, I don't use it regularly, only on the odd occasion when I am really struggling to sleep or relax. An alternative to alcohol.

The best way to access CBD oil would be without stigma, with knowledge and understanding about its impacts, and what is in it.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been made aware of people using CBD that has been manufactured in others homes. I have concerns of the quality, dosage & purity of CBD made in these conditions. CBD has had fantastic results in many people around the world & I think it would be more widely used for those that need it if CBD were available in a more appropriate and safer way.

Higher prices make it less accessible

Under the hybrid method please

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I would use CBD in a safe way and read the label and warnings.

I suffer from both anxiety and chronic nerve pain and have been prescribed many different medications including benzodiazepines and gabapentinoids. While these medications are quite effective they come with a host of side effects and are highly addictive. Having to wean off Lyrica was a horrible experience but was also necessary because the side effects were making day to day life difficult. Benzodiazepines can only be used short term or occasionally as they are highly addictive. Other medications such as SSRIs made me very unwell. The current legal solutions to my conditions have serious drawbacks which don't appear to be an issue with CBD. CBD appears to have a much smaller side effect profile and when compared with the currently available medications the continued restrictions on its availability are utterly nonsensical. I can confirm that using cannabis purchased illicitly reduces my symptoms significantly. I believe having access to high quality, non-psychoactive CBD would significantly improve my quality of life.

Lower CBD prices and better accessibility would put a useful medicine within reach of a higher number of consumers. CBD should be cheap and accessible as its side effect profile is significantly better than current medication options. Cheaper prices will make this medication accessible to those who need it most.

I believe adults should be able to purchase CBD either over the counter at a pharmacy, or from a dispensary that specializes in cannabis products. CBD use in children for significant illnesses should be in consultation with a qualified medical professional.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

For myself- I am 72 yrs old and have osteoarthritis in all joints and suffer from pain and discomfort in muscles and joints. My husband has high levels of anxiety and is cognitively impaired and suffers from stress and anxiety from this. Current medications have unwanted side effects. Would like to try CBD as have read of positive effects with little side effects.

We are retired and do not get government support and cannot afford costly medications.

I would like to buy it from a pharmacy with advice from a pharmacist. This product is available in the USA for its citizens at low cost. It should be available to Australian citizens.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

CBD oil helps my family members with anxiety, pain & sleep issues.

A lower cost will make this more available to Australian's, so many people are missing out on this beautiful natural healing from this plant. Nature is healing, people need easier access to it.

It should be available from health food stores, naturopaths, dieticians, chiropractor, etc

CBD has greatly helped with my sleep and anxiety in the past, this has always been done safely with minimal downsides

I think it has the potential to help millions of Australians, and lower prices would mean that it is accessible even to those on lower incomes - who are more likely to suffer from these minor conditions.

I would use CBD in a safe way and read the label and warnings.

Having used CBD for pain for the last 15 months for myself and my 92 year old mother, I cannot recommend it highly enough. No it doesn't take all of the pain away but it certainly makes a difference especially to joint pain, the pain level is greatly reduced making it possible to live much more comfortably and with no adverse side effects that I suffer from other pain management medications.

The price of CBD is very important to me, as I believe it would be to all Australians. At one stage I had to stop taking it because of the prohibitive price of the imported product. This resulted in a period of much higher pain levels and a loss enjoyment of life, making it hard to function effectively day to day. I then had to decide what other things (that I previously thought were essential) I could do without to be able to buy the CBD.. We shouldn't have to make that choice.

I believe CBD should be freely available to the public. In the same way that paracetamol and ibuprofen are currently available.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

Have not used it personally, but have a family member who in a severe car accident - in constant pain, and wants to try CBD but difficulty getting access to it.

I would suggest the entire process it owned controlled by a private/public partnership which caps the returns the companies can make. Provide it at the lowest possible price.

Don't let the pharmacy guild dictate how it needs to be administered. They see the potential and are thinking of profit over patient care.

If the Hybrid proposal is accepted then that will be of great relief for my husband whom has a degenerative back condition.. We can't afford CBD so my husband hasn't tried it. Apart from Targin which is dosage controlled & does help to lessen pain the only thing that really works but is not a healthy option is alcohol. Alcohol brings it's own problems & my husband doesn't want to be drunk because he's in pain.

Lower priced CBD would effect me as I'd be able to purchase something effective for my husbands pain relief. He does not work so has a small fortnightly pension (about \$50). I'm the sole worker that pays for everything & I earn a good wage which we only just manage on. So the price of CBD for Australians is very important as there are a lot of people struggling to look after themselves &/or their family (let alone for their health concerns) on a weekly wage.

Through a GP & Pharmacy

I have had limited success with pharma drugs and many of the side effects associated with them. I need relief for nerve and muscular pain. I don't want to overload my body with pharma drugs until it is absolutely necessary.

Price is a huge factor. At the moment it is unaffordable.

I can buy cbd online but not with confidence that it meets standards. I work in a position that I can not afford to have positive drug test results or be impaired in anyway. . If I could easily obtain cbd through my local pharmacy without a prescription or from a trusted outlet I could start to take control of my pain. GP's tend to be very narrow in what they prescribe and few open to alternative treatments.

When on CBD i find my self more relaxed and easier to deal with the stress of work and raising kids, and unlike alcohol i am in control of my self. I find alot of more joy when doing jobs around the house with out getting annoyed at doing them, when you ave 5 kids washing piles up. I like to do work around the house and play with my kids after i get home from work as i don't believe its sole job of my wife just because shes a stay at home mum.

I think a lower priced would be better, as lets face it lower social economic house holds would get more benefit from this then higher end income homes. While we are middle class our selves i think the benefit for the whole community would be felt if CBD was a go to choice for people rather than alcohol. While it may impact our pubs i think we would see a big increase to restaurants and take out places as a counter, if this was more available for younger people. Saturday night can be a nightmare when the drunks are out, but i think people coming home with a full belly and high are going to cause less problems for people as they are just relaxed.

The tax made from this would also benefit our lower social economic house holds as the government could fund more programs, better parks and public spaces for all.

Pharmacy or specialized dispensaries, this way you can make sure your getting the right product, and they have the best knowledge on what your going to be taking.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would only consider buying CBD at a cheap price otherwise I wouldn't be able to afford it

Easy unrestricted access like basic pain relief such as paracetamol would be best

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been studying the benefits of CBD for a few years as i have studied a Dipoloma in Kinesiology. I would be using this CBD for my own benifit and that of my family and if it proved effctive then i would encorporate it into my practice.

This product should be available to all how need it at a price all can afford. The benefits recorded by overseas studies prove it is safe and effective and it should be available to those who wish to use it.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Tendon snapped in upper arm. Very painful and Dr could only prescribe oxycontin that i didnt want to get addicted to. Cbd oil was very helpful in pain relief so did not need oxycontin.

Yes very important to keep prices low. High charges would block many low income persons from access.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe CBD oil should be widely accessible because it has been proven to be effective in treating minor health conditions and is legal over the counter medication in many other countries because of this. I have chronic pain from a past broken leg and I want an alternative to taking painkillers which have serious potential side effects and a high potential for addiction which CBD does not, I also suffer from anxiety and insomnia I would like an alternative and natural option to treat these conditions. I have been on prescription medication for a long time and the effects on my body have been horrendous and if an alternative to these was available it would be so beneficial to my health and well-being.

I think CBD should be at a lower price as it needs to be widely accessible to those of a lower socioeconomic status as well, this would provide an alternative to medications with high abuse potential which could see real change in Australian prescription drug abuse.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My doctor suggested using CBD oil to treat the arthritis in my fingers. One hand is particularly bad after being injured in a fall in the Himalayas. She said that as my arthritis was not rheumatoid arthritis, I would be unlikely to get on the government approved scheme. I am a 57 year old male.

I have bought CBD oil online over a period of some 2 years, using 6 to 8 drops twice a day on my fingers. It varies greatly & we need a standard so that the consumer knows what they are buying. Some bottles I throw out (they do nothing) & other bottles I need to only use one third or one half of the dose.

Many bottles do not state "no THC" which is important to me as I get drug tested from time to time for my work. I have even gone as far as to buy the official THC test kit from the chemist to confirm that my THC levels don't show up (but I'm aware that I need to take the test some weeks after starting a new brand). This needs to be carefully regulated as it is currently hit & miss.

Because Australian Customs seize any CBD oil that comes to their attention, a current supplier is often shut down by the time I go to reorder. For this reason I often have to "run the gauntlet" & purchase a different brand.

We need a legal standard in place & for manufacturers to meet that standard.

Having a legal standard & a lower cost & easier purchasing options would also help cut out the illegal drug suppliers/processors that have now entered the CBD market.

You have my details, so please feel free to contact me should you want any further information.

CBD oil is expensive, especially if/when being seized by Australian Customs. I took anti-inflammatory drugs before that all have their side effects. CBD oil costs me 3 to 4 times more each month than anti-inflammatory drugs.

Also, lowering the cost would cut out the illegal suppliers/processors.

Each bottle to contain a TGA approved number (like vitamins) & to be regularly tested to ensure the THC levels remain below the threshold & the active CBD content is what is stated on the bottle.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I watched a friend die of throat cancer and he used CBD regularly while refusing chemo etc.

He maintained a life for the last 18 months of his life and then died in a matter of hours when the time was right. He'd been able to live with the pain by using CBD so I'm in favour of it being legal as my thoughts on radiation and chemotherapy are not what the majority of the world agrees with

It needs to be inexpensive as it is a plant that grows in the ground and should not become a money making tax grabbing exercise for the government

Please make it available for purchase from health food shops

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

Im not fussed by the price, if it was to be made available and proven to be safe then I would love to benefot from CBD.

I know people with chronic pain who have taken CBD and had amazing results, not to mention the assistance of CBD for a good nights sleep. The fact that it is not psychoactive yet still as illegal as THC full Marijuana is an absolute joke.

High prices would do nothing to remedy the black market of CBD, which would be such a wasted opportunity.
Low prices would decimate the black market, creating a cleaner product available to all for an affordable price - it should be on the same level as Panadol to be quite honest.

Available to purchase from behind the pharmacy counter for all Australians over the age of 18.

Firstly, we have more than enough "Big Brother" in this country already.

As a salesman of 40 years, I've had many clients who suffered terrible pain and anxiety where "Modern" medicine failed to help and side effects to boot! A number of them went to great lengths to procure cannabis at much cost to do the job. This would have been the crazy stuff back then. I have also heard of others more recently who have procured some of the new product with dramatically improved help in a very short period. The public will continue to search for relief irrespective of the law because they need help for self or loved ones. Since the new breed has far better credentials surely they should be able to try it without your interference. Give them the right to test it out knowing that most will drop the idea if it doesn't work for them. Give the public credit for at least some common sense.

The fact that you were seriously attempting to deny the public to choose a qualified Naturopath over a modern, treat-the-symptoms General Practitioner tells us that we need to speak up and be heard.

I think this is another one of those moments as it seems there are many plusses.!

Thank you.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil derived from Hemp for inflammation due to Rheumatoid Arthritis and Degenerative Disc Disease. Over the counter medications do not work for me. Specialist has advised a strong treating drug with many side effects to control my symptoms. Since using CBD oil my symptoms have reduced dramatically. It has given me quality of life again. And I am only taking low dose CBD. I have confidence that Cannabis CBD will be very effective in treating my symptoms. I am in my 40's and without CBD I am looking at a lifetime of prescription drugs which are making me sicker. PLEASE allow chronic pain patients as well as the chronically ill to have access to CBD readily. Let's catch up with the rest of the world!

Higher prices would put CBD out of my range as I am a disabled pensioner. As it is I cannot afford to buy as much as I need. Lower prices would mean I could be on CBD daily which would greatly improve my quality of life.

Over the counter at the chemist seems to be the best way to begin with. That way it can be monitored until the government can see there is nothing to fear with approving this NATURAL treatment. Long term should be looking at just purchasing at the chemist, just on the shelves like every other natural supplement.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Although I do not know anyone personally using CBD, I know that many of my friends are very interested in its health benefits, such as reducing anxiety, stress, relieving mild physical pain and improving sleep. If CBD became widely available, I would most definitely use it to help reduce anxiety and stress, as well as improve my sleep.

I think the price of CBD should be kept relatively low, as it is a very safe and readily available substance that improve the health of countless Australians, and everyone should have the right to access it easily and at low cost.

I support the “Hybrid” option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I would like the choice to move away from medications that have been chemically manufactured, addictive, and severe side effects and move towards something more natural. I would like more choice in the way I would like to treat my symptoms.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Was amazed how easily it is available in Europe and the US - and the very best quality !

It is an amazing helper for my sleep issues

Only publish my name and work title on the TGA website, do not publish my submission.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

An elderly Aunt in a nursing home with serious arthritis but has a clear mind had serious depression. The restrictions meant she had to suffer for a prolonged amount of time. She now using this and although has had a mild effect on the pain her mindset is 100 percent better to cope with her disability. It took months to have it approved and feel she should not have had to wait so long to have it approved.

there is increased data on depression, anxiety and suicide being very high these days which in itself is a large burden on the health system. The lower cost would make it more accessible to the public and may help reduce numbers of these types of unnecessary deaths and improve overall health in communities.

Should probably be restricted to licensed premises or pharmacies under a "responsible sale" type licence with ID required.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I would not use CBD in a safe way and will not read the label and warnings.

I am a firm believer that each person has the right to choose their health journey, through proper consultation with professionals. Doctors and Specialists that make the diagnosis. Patients kept fully informed. Able to find clear and accurate information about options, enabling them to make informed decisions about treatment, management, support. This is one of those options.

Within reason, price should not be a reason to not look after yourself. Although it invariable is.

I dream of the day when the TGA is able to show no bias towards drug companies and the medical profession, instead looking at all goods before them in an equal light.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

If I stand on American, European and many other western countries soil the same oil is easily accessible, legal and productive. We all have an endocannabinoid system and need to be able access this plant to replenish, balance and create homeostasis in the body! I have been researching the benefits of this plant for years and have a diploma in medical cannabis and Cannabidiol. The benefits way outnumber the minimal and mild side effects of taking a NATURAL plant derived (not pharmaceutical driven product)

DescrObviously it needs to be affordable as people will not be able access otherwise. I feel in order to achieve this it needs to be marketed as a nutritional supplement and not controlled by the government as pharmaceutical medicine Or cure.

There are Currently many licenced hemp growers all over the country- that are currently exporting the plant because of the restrictions- so why not make it possible for them to produce oil (within industry standards - using organic principles and 3rd party independent analysis). This will create jobs along with supporting Australian products. Alternatively I'm not against allowing the purchase from other overseas reputable companies who follow and use the correct guidelines for production (CO2 extraction) and safety analysis (independent 3rd Party Analysis)

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used cbd with great success for to help with more restful sleep and to help relax. I believe that the fact that cbd is not readily available in Australia to be a truly outdated policy. I also know that several people I know are using illegal cannabis because they are not able to freely obtain cbd and they want to. Also, there is a building body of evidence that such products reduce alcohol consumption

Higher prices would make cbd prohibitive for me. It also seems completely unnecessary due to the fact that it is already available at reasonable prices online. Furthermore, I believe that the public may use illegal products if the price is too high

Should be freely available in multiple forms, such as candies, drinks and foods, tinctures, hemp flowers and vaping cartridges

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I'm doing this for my partner, who has a number of conditions (IBS, anxiety, endometriosis, fibromyalgia) that could be managed with CBD. Neither one of us has ever used it previously.

Many people with conditions that could be helped by CBD have multiple illnesses, and the combined price of prescriptions and medications is already high. Keeping the cost down will ensure that people have access to the medicine they need and would be less likely to try find an unsafe source.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have many friends who use cannabis to help sleep, relieve pain and anxiety or a combination of the three. A considerable number of these people find the psychoactive component to be an undesirable side effect but are forced to use whole plant material despite this, as the benefits of CBD outweigh the unwanted psychoactive nature of the whole plant. In addition to this the illicit nature of cannabis results in them needlessly becoming criminals and additionally interacting with serious criminal drug dealers, risking their personal safety and freedom, simply due to CBD being illegal.

I have also tried cannabis and found it to be very effective both for my difficulty in getting consistent restful sleep and my general pains and muscle tension resulting from my job. I personally found it to be very effective to these ends but didn't like the psychoactive component and as a result have had to look to other medicine currently available to treat these symptoms, none of which I found to be as effective, even those that were effective were only beneficial in the short term, either due to the development of tolerance or more serious issues such as physical dependency (in the case of opioid medications I have been prescribed in the past) or health concerns resulting from long term use. Due to these factors I am rarely able to find relief.

Finally my mother suffers from osteoarthritis and whilst I believe she would find relief from her condition with CBD she would never entertain the idea due to its illegality. I do believe however if CBD were to become commercially available she would try it and allow her to enjoy many of the activities she did before the osteoarthritis made them far too painful.

As a lower income worker I simply wouldn't be able to afford CBD if it were to become too expensive. Additionally a disproportionate amount of lower income workers do physically oriented jobs, the nature of which creates the symptoms that CBD would alleviate. For these reasons I believe CBD must be priced in such a way that those most likely to benefit from it are able to obtain it without causing financial strain. I believe it to be extremely immoral for a person's income to

dictate their ability to benefit from a medication.

Due to its safety profile and the lack of a psychoactive component I believe CBD should widely available to adults without stringent dose controls. I do however believe that the commercial production of CBD should be regulated and subject to quality control in a similar fashion as other medications, in order to assure a high quality product free of unwanted additives.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer from Fibromyalgia stemming from childhood abuse which has left me incredibly vulnerable to stress and anxiety. When I visited California to see friends and they gave me a dose of CBD which helped to ease symptoms in a subtle but effective way.

I am of the belief higher prices prevent poverty stricken people from accessing medicine and thus we should work to reduce costs as much as possible, especially in times where public health is fragile. Pragmatically, preventing a wider pool of participants to gather research from seems counter-productive to our goals to better understand the drug.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would like to try CBD for Arthritis to alleviate mild pain and stop it from becoming worse. I would also recommend it to our 84-year-old friend against Arthritis and sleeping disorder

I have tried many over the counter medications and herbal remedies, which all added up to be expensive and did not help, so I would appreciate anything that does provide relief, if it is offered at a lower price, it would certainly make it more affordable and could help those, who were not able to afford medication until now without the extra expense of going to a doctor, trying all other available medications first, just to find out after years they don't help.

Health Food shops should be able to offer CBD, not just pharmacists or doctors.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I'm a trauma therapist and have seen client after client with debilitating health conditions and life limiting illnesses struggle to afford good quality CBD and struggle to make sure it is legal. No-one should have to worry about getting CBD at a time when their attention needs to be on recovery or preparing for their death in the most painless way possible. I have heard comments like they are able to sleep using the CBD which is such a gift to these people.

It is wrong on so many levels to have CBD out of the financial reach of those who need it. As I mentioned before people need to be focussed on their healing not stressing about how they can afford the CBD. Totally inhumane to price CBD out of the reach of those who need it.

At the coalface, sitting with people who need CBD and can't afford it is real and abhorrent to watch.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Chronic musculoskeletal pain - helped reduce severity of symptoms.
Sleeplessness - helps with sleeplessness.
Anxiety - helps support mild anxiety.

Lower prices means more access to CBD. This also means there will be a bigger pool of data for the TGA to evaluate to make further decisions on its impact.

I believe initially it should be a Schedule 3 medicine, and after a period of time where more data is collated, can be downgraded to a Schedule 2 medicine.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD products for mild pain relief with great results. The major issues I have experienced are only the high cost and limited availability in Australia.

The lower pricing point for CBD products would make it more available to people who are suffering from mild issues. Personally it would benefit me by allowing me to use the products more regularly as the higher costs prohibits on going purchases.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a friend who experiences severe seizures on a daily basis. I have personally witnessed these seizures firsthand, and the constant pain and difficulties they have on her daily life. She believes the use of cannabis has a significant reduction in her episodes frequency where many doctor prescribed medications have failed. I believe that she should have the right to explore and test CBD oil as a legal alternative to treat her chronic condition.

I believe the cost should be reasonable and not excessive. The technology to produce significant quantities of oil is already in existence, the only limiting factor for businesses are the legal hurdles. CBD oil has a number of positive effects and should be freely available as a pain medication alternative. at a similar price range per dose.(\$20-\$50 per bottle).

Over the counter at pharmacies would be the ideal solution. It should not be sold with alcohol or cigarettes or by unlicensed vendors.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have trouble sleeping due to stressing over my job, i'd like to be able to try low doses of cbd for helping with sleep without making me drowzy the next day as many other over the counter drugs have.

I'd be fine with higher prices if the money is specifically going to taxes to help support healthcare. But i think lower prices may help cut off the black market for some of the THC based industry.

Pharmacies seem like a good idea, for CBD.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am currently prescribed CBD (and THC), for chronic pain relief and anxiety. It costs me \$275 for 2400mg in a 10ml container, which lasts me approximately 3 weeks. The cost is absolutely ridiculous if you compare it to readily available CBD products in other countries where it is legal to buy without a prescription. It's been proven to be effective for the conditions listed in this questionnaire already. It is much safer to use for my pain than strong painkillers for a number of reasons, most importantly it doesn't have strong addictive qualities like many painkillers do. I would also like to mention that CBD flower is legal in every state in the USA at the state level, making it affordable and easily available and this really should be considered moving forward for Australians.

Lower prices would mean i can afford to spend money on other things apart from pain relief. At the moment 90% of my income goes towards paying for my medication which includes THC flower and CBD oil. It would help me be a more productive member of our society by letting me put money towards bettering myself and my environment.

Online stores, Health food stores, Supermarkets, Petrol Stations, just about any retail store where age identification can be asked to be seen. I see no reason why there should be a restriction on who can sell this product so long as the products manufacturing is regulated.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

people I speak to that have tried hemp seed oil from health shops say good results on pain but expensive, I have severe arthritis I would like to try if its cheaper and no bad side effects. if you live long enough good chance most of us will suffer from arthritis pain eventually. over the counter non steroidal anti inflammatory drugs are not without side effects for all in the long term. manufacture in Australia could help farms create jobs especially regional area growth also export o/s and boost economy

I can afford alternative health supplements for severe arthritis at the moment still have super money when that runs out I will struggle to afford just like others relying on just pension they cant afford much more than house food car cost and put up with the pain or go to hospitals for free treatment / medication costing government more

pharmacy is where I would try it from myself if I hear of good reviews about it when or if its available

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The proposed change will impact me as a lifetime sufferer of fibromyalgia and restless legs syndrome. The pain I live with each day is moderate and manageable but I would much prefer to use CBD over NSAIDs and occasional use of opioids. I have not used CBD but extensive research has informed me that there is a good chance it will provide me with relief

CBD seems like a lower risk, natural alternative to medications for minor issues and should be widely and cheaply available for all Australians.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I have used CBD products for reducing joint inflammation and assisting in restful sleep and found it beneficial.

Having access to CBD at reasonable prices from Australian companies would allow the market to have healthy competition and drive towards the best outcome for the patient, the highest quality CBD at the lowest cost.

The best way for the public to access CBD is from online retailers enabling the best possible range of choices of retailer. The retailers should also be mandated to publish third party test results of their CBD products on their website.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Severe PTSD and Anxiety following being a VERY innocent victim in a drive by shooting (bullet fired through my bedroom window) Psychology, and various other treatments were not helping.. CBD oil has helped me calm down enough to sleep in my own bedroom, no longer feeling sick in my own home, and to be able to talk about the incidents to help recover from it too...

Obviously when your health is affected, your ability to earn an income is affected too... CBD oil needs to be cost effective for low income earners to be able to afford this..

I would use CBD in a safe way and read the label and warnings.

I have friends in the US who currently successfully use CBD for mild pain management and anxiety, both which affect me in my life right now. It would greatly improve my quality of life

Higher prices would not affect me too much personally, but I do believe it would affect Australians generally especially in this climate surrounding COVID-19 people are struggling financially

I believe it would be the best to have access to CBD from controlled manufacturers via pharmacies, doctors or specialised and licenced stores

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Widely available, low cost CBD would make such an impact on our families health & wellbeing, saving us money & the stress of sourcing it illegally..

We have witnessed huge results from this essential mineral & would love to incorporate it into our daily diets if it were financially sustainable & easy to access..

Currently legal or illegally sourced CBD isnt financially sustainable for an individual let alone a family wanting to use it as a daily vitamin..

Lower costs would give every Australian the opportunity to try..

Low THC CBD should be available to purchase anywhere in Australia without prescription as a dietary supplement, the same way Hemp foods are sold in Australia..

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Wednesday, 20 May 2020 3:24:06 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Lower prices mean it's accessible to everyone

Standardisation of the drug quantity and available like herbal medicines and vitamins with directions and any warnings applicable.

Only publish my submission on the TGA website with confidential information redacted. Name and address

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am a pensioner so could only afford the CBD at a low price. I believe that CBD should be available to every Australia as another medical treatment at affordable prices. It appears to be another option to treat many health conditions but must be used with caution the same as any other medication.

I believe the TGA needs to make sure there is quality control with the CBD so the public can be assured they are using a safe product at right dose the same as you would for any medication.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

I was using a quality oil from the USA for a short time before Australian Government stopped us from importing. In the short 3 months I was using it, I noticed my anxiety had lessened and my sleep was starting to improve. I also noticed my chronic pain was more manageable as I was coping better. I was devastated when I could no longer buy it.

I will be a Pensioner in a few years so price point will definitely be a factor. The price needs to make CBD available for people on lower incomes as well. People using this amazing, natural product at home will, in the long run, mean elderly may be able to live at home just that little longer before having to go into care.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I have travelled to the USA and the UK and purchased CBD legally from high street stores, with clear labelling and exact information on what I was consuming. I found these products to have great benefits to me towards a more restful sleep and reducing inflammation and mild pain with shoulder and knee problems.

There is no reason whatsoever that these products should not be allowed for general purchase to the Australian public as it's clear from the studies, as well as from anecdotal evidence in the UK and USA, with much larger populations and usage than here, that there are no adverse affects and zero risk to using these products. Continuing the current outdated policy only leads to illegal and unregulated growing operations and importing from overseas with no benefits to Australia. Let's make the sensible choice and follow the rest of the western world in making this available to all.

The market will dictate the price just like it does for everything else.

The USA and UK have demonstrated that this can work, can benefit people's health tremendously, as well as adding billions of dollars to the economy which is desperately needed in these current times.

I would use CBD in a safe way and read the label and warnings.

I have had chronic back pain for due to a work injury for decades. CBD oil is the only thing what helps for the pain with NO SIDE EFFECTS.. I have used it for 2.5 years. I recommend it to anyone. It should be legal. There are so many other health issues it can benefit. I have had no ill effect at all. You can't overdose with CBD oil. I also used high doses after Cornea surgery last year. I didn't need any of the prescribed pain medication I was given.

Lower prices for CBD would means it is accessible for all people. Which it should be.

I am a pensioner and the CBD is a huge expense. But my quality of life is most important.

It should be available from the Chemist. Over the counter /prescribed by a doctor.p

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

A loved one has Multiple Sclerosis and has used CBD without pharmacist advice and instead has been looking into world-wide usage success. It has been incredibly helpful for pain, stress and sleep. This loved one only uses it when it is needed.

Another loved one has long-term anxiety and high levels of stress. They have found this is a natural way to support their sleep and clear their insomnia. Again, this was done through research and not pharmaceutical advice.

CBD oil needs to be accessible financially and physically. The dosage needs to be of a wide enough range that allows each individual to find the amount that helps them. If it becomes too controlled then many people won't be able to access it, including my loved ones and potentially myself in the future. Our governments need to contribute to more research into natural therapies and natural medicines, so we can build upon what treatments are available for the Australian community and worldwide. Don't restrict something that is already showing such promise (like most natural medicines and therapies) through the wide use within the community and current research.

As previously stated, higher priced CBD oil will exclude lower socio-economic groups in Australia. There needs to be fair competition for companies to supply high quality controlled products at competitive prices to all of Australia. Medicines can be expensive and many people are purchasing more than one type of medicine so it all adds up.

Giving fair access to natural medicines takes the load off the medical industry by giving our community the ability to choose what kind of medicine they take. There needs to be a complementary model of health whereby hospitals, doctors and pharmacists work together with natural therapists. This is the best outcome for Australia - team work. Just like what has been happening throughout Covid-19. The clear message

that natural medicines and therapies support doctors and hospitals.
CBD is part of this big picture.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

Being a pensioner cost is very important

In this year 2020 CBD could be made available in Pharmacies to free up Doctors time

Only publish my submission on the TGA website with confidential information redacted. Do not public my healthe history

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have had no experience of CBD personally but I have followed the ongoing discussion re it's potential in alleviating issues such as anxiety and stress. As at the moment it is impossible for me to try it as the availability is seriously restricted hence I am advocating for the option "B".

Thank you for the opportunity to voice my thoughts. Cheers Bruce Kerr

Obviously a lower price would allow people on low incomes to be able to partake in it's beneficial qualities and hopefully use less from synthetic medications.

I'd assume being available through a chemist would suffice.

I would use CBD in a safe way and read the label and warnings.

Used for my self for inflammation and insomnia.

My partners migraines improved while using CBD.

And my uncle who had brain cancer was able to eat and keep food down for the last month of kemo while using CBD.

Higher prices would generally mean the product is of better quality.

Same as the UK, where you can buy good quality CBD products from health food stores, but also obtain stronger CBD products from a pharmacist.

I currently import CBD oil from overseas to assist with sleep. Since using CBD I no longer smoke cannabis. Unfortunately it is very expensive

Lower prices would mean I would be more inclined to use a suitable dose, instead of only using it when desperate

This is a very safe medication, it should be freely accessible. I can see a benefit in going to the pharmacist as that would be a good time to discuss other options and when it is time to see a doctor.

I would use CBD in a safe way and read the label and warnings.

I have not tried CBD however I've seen the reviews and reactions from people in the US who have tried it for help with minor anxiety and sleep problems and I think it would be beneficial for Australians to have access to it.

Higher and lower prices would determine whether or not I could afford to buy it. It's meant to help people so it should be at an affordable price point so it can be accessible to people who need it.

The best way to access it would be by making it available at pharmacies in a similar way to the morning after pill, where you don't need a prescription but you talk to a pharmacist and they explain the dosage, side effects and contraindications with other medicines or health conditions.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The proposed change for CBD to be widely available over the counter in Australian pharmacies would highly benefit . I use CBD for a wide array of conditions from very minor to very serious illness. My experiences have been unmatched, natural feeling relief, improvement in all aspects from mood, energy levels, pain and general well-being. Without ANY intoxication, psychoactivity, or side effects, This needs to be more widely available for every Australian for every condition. It is extremely safe, high doses are not detrimental therefore there should be absolutely no cause for concern.

I take CBD oil every day to manage a very serious seizure condition, higher prices on CBD oil would make it impossible for me to purchase my own medicine. I need to budget the way I eat just so I can afford my pain relief. Lower CBD prices would allow me to do the things in life I want to do as opposed to the things in life I HAVE to do.

I believe the time is now for the TGA to make CBD and CBD products widely available for public access in pharmacies. It's happening all around the world, CBD is extremely safe, would create cash flow and provide proven, natural medicine to the public.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My father has severe pain and has been diagnosed with an assortment of ailments that I truly believe CBD would assist. He is currently on an insanely large cocktail of synthetic pharmaceuticals, which cannot be better for him than a naturally derived alternative. It would be life-changing for him (and by association his loved ones) if CBD were at least available for him to try to see if could alleviate some of his chronic pain, as well as assist with his anxiety and sleep issues, which are a by product of all he suffers.

Of course price is important. It should not just be the affluent that have access to products that assist with health and well-being. Who know, perhaps if this were widely and affordably available, it may reduce the current strain on the health system.

I do think that the product should be widely available, but also monitored to minimise the risk of over-use or misuse. I have read about the wonderful benefits of CBD and I do believe that it should be affordably available to mainstream Australians, but it should be prescribed by a physician and administered in the same way as all pain and mental health medication is - I believe that the availability of a natural product should be advocated for in place of chemical alternatives.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I safely consume CBD for anxiety/stress. Anxiety symptoms are greatly reduced within 5-10 minutes, which is so helpful in avoiding panic attacks and centring my thoughts/self again. I have been on numerous pharmacist SSRI's for panic attacks which I greatly regret trying, cbd helps me manage and cope with my anxiety easier and i feel more safe taking it than anything else sold at a pharmacy.

Lower priced cbd will allow wider access for people who may be low income. The price is important as it should be accessible to every one who would like to purchase it, but this shouldnt jeopardise quality.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have read widely on the use of CBD for various minor health conditions. It seems to me that it has a broad range of applications and that it potentially has more benefits and fewer negative side effects than many of the analgesics that are currently available. I think it could be my go-to for many mild conditions, when required.

CBD could not be used as I envision, for the relief of many minor health issues, if the price was prohibitive. I don't think that there is any reason to artificially inflate the price or else it will become an option only for the wealthy.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used cbd oil and it helped me with my pain from caring for my disabled son for 19 years 24/7 also helps with stress / anxiety and insomnia. I would think it better to have a person who has had sleep versus non sleep. Cbd oil is a good choice for alot of ailments etc . It is currently very expensive and hard to get. Reverse this make it cheaper and more available. Valium antidepressants and opioids are my options otherwise and they come with so much risk of addiction and overdose. Australia its time to catchup with the rest of the world on this , maybe overtake them and lead the way on this natural plants benefits

Lower prices means i could take it regularly and maintain good sleep and pain relief and no longer feel anxiety

Follow how other countries dispense it

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer from anxiety & chronic insomnia as a result of a long career in nursing. I would like to be able to access CBD for these conditions. I also care for very elderly parents. From research I have done, I think they would benefit from access to CBD for chronic pain from arthritis.

I could only afford to pay a lower price as I am on a carer's pension. All Australians should be able to afford access to CBD, not just the wealthy.

CBD should be widely available like vitamins & other health supplements.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I'm currently prescribed CBD Oil and THC Oil. I suffer from chronic pain (5 1/2 years), Fibromyalgia and Chronic Fatigue. I have had great results from my Medicinal Cannabis. I am only on a low dose and am guided by the GP associated with the clinic I attend. I do find it extremely expensive and would like to see a huge price reduction. I am lucky we can afford it but I feel that there are thousands of people out there that can't access it due to price. I know that I would use the CBD safely with or without a pharmacist's advice as this is what I am doing now, self medicating.

I would love to see CBD come down in price to something that is manageable by all Australians. It would certainly help our budget if the price was lowered.

I think that every patient should discuss it with their Doctor first. I believe if a Doctor could issue a letter stating what diseases you have and that CBD is likely to have a positive impact on your health. This could then be taken to the pharmacy who could then dispense it.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I would use CBD in a safe way and read the label and warnings.

I have a couple of relatives who have been in constant pain for years, they have tried CBD safely and found it to have a profound positive effect on their lives, however as they are pensioners they can't afford to keep using the product. If CBD was available to them at a lower cost, the improvement on their lives would be hugely positive. It would mean less trips to the doctor and at times hospital, freeing up much needed beds, being able to live their life less pain free and not be so depressed. The list goes on.

Lower prices for CBD would have a huge impact on the community in general as it means more people can access it safely. Be less dependant on drugs of addiction, i.e opioids, there could be potentially be less crime if people can access CBD safely & not seek other drugs to assist with their illnesses.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I've tried it myself numerous times for a back condition I have after breaking it 5 years ago. My step mother uses it for her severe scoliosis. It has made an incredible difference to her quality of life. She was addicted to morphine patches for many years and hardly uses them now after CBD

I can only access this on the black market at the moment. I look forward to it being legal as I'm sure once it is regulated it will be cheaper

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil for a number of chronic conditions with great success. I know many people who do.

I have never experienced or heard about any bad side effects. I think the dose should not be regulated by legislation as people have different responses to medications and require differing doses according to need. Larger doses could be restricted to 'practitioner only' regulations, allowing complementary medicine practitioners to prescribe and monitor it.

Of course price is important. The very people who need it are those suffering from chronic problems that often prevent them working at full capacity

I think low concentrations should be freely available over the counter. Higher concentrations should be available from GPs, naturopaths and Chinese Medicine.

Only publish my submission on the TGA website with confidential information redacted. Name, address and phone number

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Many of my family and friends have used CBD and it is having such an amazing positive impact. It is mostly helping with sleep, anxiety and lowering pain levels without the need for painkillers. Never have they experienced any adverse reactions and it is very safe. Currently it is hard to buy and very expensive. I believe people are able to manage this medication without the need for a pharmacist or prescription. There is no need to take too much as you are only wasting your money and it does not give you any greater effect.

I think CBD should be accessible for all, however a quality product is very important. I think if the price is too high people will not be able to access it, however if it is too low it will affect the quality. The price needs to allow the growers and makers to be able to make a good product using quality ingredients.

On a recent trip to Hawaii I was able to purchase a range of CBD products at health food stores, actually I think it was sold everywhere, it really was not a big deal. I believe that in Australia CBD products should be able to be sold in any relevant retail store/market.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I used CBD at about 12.5mg daily for help with a diagnosed panic disorder with derealization disorder and the effects have been far more beneficial than any SSRIs or antipsychotic medication I have previously been prescribed, without the harmful side effects of the medication.

Obviously we need a lower price to make it available to people of all socio-economic backgrounds. Illness doesn't discriminate and neither should we.

I would just say maybe that only allow access to lower dosage CBD to start with and ramp up with time to a suitable case by case level. Also make sure that companies producing CBD have to submit regularly to testing in particular the levels, some people are very sensitive and if the levels are too high it can counteract the good effects.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have personal experience using CBD derived products safely after doing my own investigations. Over the counter CBD would allow people to access the benefits of CBD without exposure to other psychoactive components found within Cannabis and requiring them to participate in illicit markets.

My experience has been that I suffer from some kind of overactive mind or stress disorder, I have some trouble that can build up into periods of extreme anxiety, and troubled sleeping, CBD appears to alleviate the condition well, I have been prescribed a number of other medications over the years, and found that I did not like the side effects and that over long periods of use I developed a tolerance and required stronger doses which usually scared me away from continuing with those medications.

My experience with Cannabis based medication is that my dose levels do not increase over time. I understand this is anecdotal and potentially biased however I feel that I am a good example of a safe CBD user, to whom the medication has rendered no perceivable harm and perceivable benefits.

I have family members who could potentially benefit from this medicine for relief of suffering relating to other conditions, which I believe reputable studies have indicated that some benefit may be possible, however they are not confident performing their own research nor experimenting with products that are used overseas but not available for recommendation by local medical practitioners, which is fair. Please help them.

Lower prices will make the medication more readily available, at the moment CBD is available at a particularly inflated price, which results in not everyone being able to access it, or not access it when they need it due to financial constraints.

There is no justifiable reason to allow large profits, or to place excessive taxes upon medication that people require to lead productive, rewarding and useful lives and healthily minimise their pain. The benefit to society is much greater in the money these folks will be able to spend in our economies, and the good that they will do, and the benefit we can all gain from the increased quality of lives, especially to our elderly loved ones who are particular consumers of medications for which CBD can potentially provide a healthier alternative.

Higher prices would minimise the beneficial effects this medicine can have for our community.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

It has helped me greatly through times of extreme insomnia caused due to stress, anxiety, bipolar and depression. Sleep provides me with the ability to think clearly and deal with myself in a more productive way. It is a huge aid to my own mental health and others in my family and close friendship circles.

Like any medical product that serves to help a large swathe of the population for a myriad of illnesses and ailments, the cost must stay low to ensure equality of access to all.

allowing the public to trial and understand, eventually we can grow it ourselves like any other medicinal herb in the garden. Self-regulation with good guidance.

I would use CBD in a safe way and read the label and warnings.

I have used CBD in the past to alleviate symptoms of anxiety, mild depression, deal with minor pains and aches and, depending on the quality and dosage, found it beneficial for all these symptoms. Whilst I was able to buy cheap good quality CBD oils in countries overseas, I found it hard to find CBD oils of similar quality in similar price-range in Australia.

Affordable pricing for CBD oil is important to enable all Australians access to this natural health remedy to safely alleviate a variety of mild health issues.

I would like to see CBD oil as readily available to Australians as aspirin and paracetamol are currently available to the public.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

Lots of friends suffer from stress and using CBD might help them to rest better. Also IBS, I have no trouble but know a lot of people who would benefit from even a short term daily use of it. Lots of studies at the moment with CBD and dealing with Chemotherapy side effects, that would help lots of sufferers.

Everyone likes lower prices, but if you can afford to buy cheaper you can have CBD in different places in the bedroom and bathroom for easy access.

It might be used more regularly because it can be affordable.

Any pharmacy, health practitioner registered with AHRA should be able to sell CBD oil, tabs or cremes.

I would use CBD in a safe way and read the label and warnings.

Family has safely used CBD at high doses to treat numerous ailments and support overall health for many years. Very good results for assisting family members suffering from crones and irritable bowl disease.

Cost is a major driver for use if any product and CBD is no different. CBD should be available at a fair price and given the ease of manufacture, cost should be fairly low if it is not unduly taxed

Should be available at pharmacies, health food stores and supermarket just like other available health supporting supplements.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I have heard so many people benefiting from CBD with pain, sleeping conditions, anxiety etc, but they all feel like they are criminals because it's not legal. They find the side effects of pharmaceuticals worse than the ailment they are trying to treat but CBD has no adverse side effects, they just can't have easy legal access to this which isn't right. I am very much in support of the Hybrid C option put forward.

Price points are always important, as it puts a barrier to those who are low income earners being able to access this long term. If the cost is too high, only those who are high income earners can access this which is unfair to the rest of Australians who need this product.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I have 3 auto immune diseases.. I have to take medication so I need for other natural medications to be the best possible price ever . I think Australians deserve to have a break when it comes to managing their health..so many people are going without because of the cost of things.

Hospitals cant handle demands, so Australians need to be able to look after themselves and at least manage their afflictions.

I personally would prefer to go to my GP get a script or at least a letter to say I am eligible to get CBD.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have never tried CBD Oil, although I have heard many success stories for general health and wellbeing. I am getting older and I'd be interested to see what it was like.

The company I am a Distributor for, Young Living Essential Oils, has CBD Oil and it's only available in USA. I would love to be able to try their CBD Oil and have it allowed entry into Australia via Young Living Australia for their members. I fully trust this company and their products and would not hesitate to purchase Young Living's CBD Oil.

Higher or lower prices for CBD would definitely affect my decision whether to buy it or not. Obviously the lower the price, the more affordable it would be for me.

I do believe in my heart that any CBD Oil produced by Young Living Essential Oils would be 100% pure and safe. I trust this company wholeheartedly. In addition to this; the training Young Living gives it's members is outstanding. I don't feel anyone would be unsure how to safely use Young Living's CBD Oil.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Wednesday, 20 May 2020 3:19:03 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The proposal of allowing cbd oil in Australia will benefit members of my family who suffer for mild anxiety, an inability to deal with stress, and struggle with sleep. My family member is currently on medication to help treat these minor but impeding conditions. Unfortunately all forms of these medications have unappealing side effects, essentially masking one problem and causing another. Having cbd oil available will give us another option which by all studies, and colloquial evidence in places where it is legal such as the USA, has few side effects if used properly. If this can help either 1, reduce my family members reliance and dose on anxiety medication, or 2, completely stop the need to take anxiety medication this would provide an excellent health outcome for all members of my family.

Lower prices, or similar to anxiety medication would be ideal. If we are unable to afford the costs it would be less appealing to pay for.

Public information campaign on proven benefits, and also areas that have no evidence of helping. So only the people who will get a benefit from it will access the medication.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Wednesday, 20 May 2020 3:18:57 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

SHARE YOUR STORY: The TGA would like to know how the proposed change will impact you. Please describe whether you or your loved ones have used CBD safely with or without a pharmacist's advice. What was your experience?

I know of a number of individuals who used cannabis in various forms for insomnia, anxiety and/or pain. All used the substance without any apparent harm.

Describe how higher or lower prices for CBD would affect you. If you think the price of CBD is important for Australians, please describe why.

Higher prices effectively restrict access to low-income persons. It is likely that CBD used for pain would be less harmful than daily long-term use of paracetamol or NSAIDs. If the cost of CBD were low enough many individuals with chronic pain may use it and may suffer fewer and milder side effects.

Provide any other feedback (if any) you have for the TGA on the best way for the public to access CBD here:

A listed medicine would provide greatest access at lowest cost. In the process of approving the medicine for addition to the 26BB list, ie permitting its use in Listed medicines, the TGA would assess both quality and safety as per its normal procedure.

In terms of safety, the a would determine the safe dose and safety in certain populations. Restrictions on the dose would be enforced by the Listing engine in the ebs portal, exactly as for eg Vitamin D. Restrictions on population would be similarly enforced by the Listing engine by the requirement for mandatory warning, eg ADULTS ONLY warnings etc for cold and cough remedies. Other safety issues could be mitigated by further requirements eg warning statement not to use heavy machinery while using the medicine.

In terms of quality, this is also examined by the TGA in the ingredient assessment process. As all medicinal ingredients used in a

Listed product must comply with an official monograph if one is available, the TGA could develop its own or refer to another. Again, all this is within the TGA's normal procedures .

In terms of efficacy, the TGA could accept a monograph type arrangement similar to accepting a Canadian natural ingredient monograph as evidence for low-level claims. The Listing engine could have an added advisory, similar to those already used, which flags to the sponsor that only certain claims are permitted for CBD. The TGA could then automatically review each newly-listed CBD medicine for review, as it does for weight-loss products at present.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I lived in Canada where cannabis is legal, and used it safely and successfully without a pharmacist's advice to great effect for my anxiety and migraines.

For those who do need to take it on a regular basis, high prices would obviously be negative. It shouldn't be expensive to produce.

Cannabis dispensaries work well in Canada and the US.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I suffer from chronic severe pain, fibromyalgia, and auto immune disease and I have been on pharmaceuticals for over 12 years of which I have weened myself off under the advice of my GP. I have replaced it with CBD oil and this works incredibly well, life changing. However the cost under prescription is unmanageable for myself and others like me. CBD oil should be legalised and made available at an affordable cost to everyone who needs a long lasting alternative to the normal Pharma drugs, that overtime do not work and cause major health concerns as they did with me.

Making CBD affordable will be beneficial to a wider customer base rather than just those who can afford now.

I feel that it needs to be administered by doctors, and specialists and those who have the experience in the affects of CBD and can advise alongside health care professionals the best dosage and the right way to use it.

I would use CBD in a safe way and read the label and warnings.

A hybrid public/private model would be ideal because it allows low income Australians and those who need medication to treat specific ailments to access CBD without being too costly (like the PBS) but also allowing everyone else the ability to purchase CBD products to support mild pain relief, anxiety, and support better sleep. It's important that a product with benefits to the Australian people is accessible to all and price is a significant part of this.

CBD should be easily accessible to the Australian public through legitimate, regulated environments (otc at pharmacists, registered sales outlets). It should be available to purchase online through reputable means so as to be available to people living in isolated areas or who are unable to travel.

Do not publish my name or my submission on the TGA website.

I would use CBD in a safe way and read the label and warnings.

I am a naturopath and see many people suffering with chronic pain and insomnia. They are unable to work or live a "normal, pain free life". I would like the option to try CBD as a pain medication for them.

Lower prices would be more appropriate. This would make CBD more widely available for people. I work in a lower socio economic area and people do not have large funds to support medications.

I would use CBD in a safe way and read the label and warnings.

For years, my nephew has experienced stress, anxiety and been challenged by emotional flare ups and ambiguity. He had real problems relating to his parents and was super aware of faults in them and would spend lengthy phone calls ranting about their mistakes and faults. He continues to criticise his parents and does not relate to his siblings, cousins or other relatives..

After the breakup of his relationship of 17 years, he has had great difficulty in finding his place in the world and still

From research and anecdotal evidence I feel certain that he would greatly from CBD as it would reduce his anxiety and allow him respite to recover his potentially valuable skills and healthy lifestyle.

Naturally if the pricing was lower it would avail more people to access it more readily and I strongly feel that all Australians are entitled to choose this natural medicine if they can afford it.

As indicated at the start, CBD is best available from health stores, pharmacies, medical centres and other such outlets. With appropriate labelling, CBD is a truly effective supplement for a vast range of issues that can be dispelled in their early stages, rather than being exacerbated by ignoring them or only being able to be treated by a doctor at a cost.

I would use CBD in a safe way and read the label and warnings.

my life would be far easier, having a diagnosed inflammatory and degenerative lung disease that has no cure for and only modern medicine treats with steroids and relievers, along with IBS, joint pain etc.

i have spoken to many others who have had positive results through their own experiences

it is the only reason i can still make a contribution to society through continuing to work .

i would be better off financially and mentally if it was available over the counter at a more realistic price, nearly everyone i speak to would use it if it were more accessible and less expensive. it is far too expensive for a very easy and simple to produce plant based product.

i believe personally it should be as available as panadol is

due to the lack of toxicity of CBD and due to lack of psychoactive effects i feel it should be freely available everywhere whether it be chemist, online or supermarket with the choice of people to report any effects they feel, positive or negative to their doctor or a dedicated web site.

any mode of administration via raw flower material for low temp vapourisation or refined oil should be made available to consumers at various percentages and different carrier oils or alcohol tinctures, or glycerine tinctures

I would use CBD in a safe way and read the label and warnings.

I have used CBD without pharmacist advice as it is not needed. There are enough studies done on it internationally to know how and why it works. Let people have access to this organic medicine.

Of course price is important. This is a cheap medicine. Hemp grows without the need for pesticides. CBD is easily extracted. It is a cheap process. The waste material from CBD production (plant matter) can also be used from leaf to root in other forms - paper, industry etc.

Make it available and as cheap as possible.

I have heard and read many accounts of Australians and other residents around the world receiving broad benefits from CBD. Healthy alternative to pharmaceutical drugs

I think it should be a fair price comparative with the processes of production of a quality product. The more pure (& healthy for our body) the product the higher cost we should be prepared to invest.

It should be about the quality of the producer and the compliance of the process of production. If the process is thoroughly registered in accordance with legislation for known outcome what could ever be a problem? Let the product be freely available to the public in Australia please.

Only publish my submission on the TGA website with confidential information redacted. All personal details - name, address, email etc

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have chronic back pain from a work injury. Doctors have only ever been able to prescribe opioid pain killers. When I was in America, I legally tried CBD oil and for the first time since the accident I was pain free

Lower the price, the more accessible it is to poor people

It's a chemical derived from a plant. It should be available based on it's low toxicity and proven results

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have purchased it from 2 retailers & consumed it as a supplement. It seemed to give me an increased sense of well-being. I haven't finished it nor feel inclined to soon.

Often people with chronic pain or disease have been financially disadvantaged.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

While travelling in the USA, I had pain in my feet and hip. I found it difficult to sleep and this creates anxiety. I visited a health food store to see what could be taken to help. I was offered CBD oil and it was about \$25 USD for 200ml. I took a few drops 2 x a day under my tongue. After a few days I was feeling more relaxed, I was sleeping without waking during the night and the pain in my feet lessened. I would really appreciate being able to use CBD oil again as I do suffer from joint and nerve pain sometimes but I don't want to take chemical pain killers so I am often thinking of how can I find CBD oil in Australia. The product I used was Sunsol from Oregon and was flavoured with peppermint oil. I have friends who have had similar experiences. I think a consultation with a cbd practitioner would be the best way people could be guided on how to use CBD oil.

It's more about the quality for my personal use. I don't want to put rubbish or synthetic products in my body. The average person may not understand the difference but if something is cheap it is often not the highest quality. If CBD oil was too expensive for some people, a black market may develop.

The way that I bought the CBD oil in America seemed to work. A consultant that knew the products offered me choices of price and quality. I took the best quality. Better to keep the product as a practitioner product to begin with until patients/ customers and the TGA become more familiar with the needs of people and the industry

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Most Antidepressants are not effective for my mental health issues and cause unwanted side effects. CBD in the past has made considerable improvements to my mental health, when taken in moderation. Without it, I would have suffered more as my mental health condition makes it difficult to function. CBD provides relief, without the unappealing side effects of 'benzos,' and for me, it is non addictive.

I am on the DSP so costs are a factor in everything. However if the quality of the CBD was extremely high I would not mind paying a moderate price. I would only consider the legitimacy of a higher priced CBD product if the profits were ethically returned to necessary health programs.

Copy Canada's program, simple as that. They're a Commonwealth country and so similar to Australia, and we would do well to duplicate their processes.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My 45 year old son has had Diabetes Type 1 since he was ten years old, and developed epilepsy in his early teens, due to the side effects of the neurotoxin Aspartame he used instead of sugar. He has nocturnal epilepsy, and has suffered oxygen deprived brain damage resulting from grand mal seizures. Since taking medicinal cannabis orally, his seizures have dramatically decreased to the point where the last seizure he had was on Christmas day, and has not had a fit since then. His neurology team are extremely pleased with this marvellous result, as we his family are, and I want to say that it is a miracle such a herb exists that is effective against so many inflammatory conditions, including those of the digestive system. As I have PTSD from childhood abuse, I find that a daily oral dose is sufficient to ease my anxiety and help get me through the day. We have used decarboxylated high quality organic medicinal cannabis developed with strong CBD and low THC, and are extremely grateful for the profound benefits.

Low prices are necessary to make medicinal cannabis available to those who would benefit from what is basically the supreme herb. Currently the price of cannabis legally acquired is similar to the black market.

I would say that people who need cannabis should be able to grow it like any other herb, as has been done for thousands of years globally. It was cultivated and used medicinally right up until prohibition, and the Western world has a lot to answer for in preventing its use. Having said that, as we have to go through legal and conventional avenues, cannabis should be made accessible and affordable via the medical system.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I've used the oil previously and it really helps with sleep, anxiety, neck and back pain, menstrual pain

It should be low cost as it's a very useful medicine. It should not be high cost and inaccessible to people of low income. That's just unfair that people with income are advantages due to their financial status

Please ensure it's as accessible for all for a range of minor to more serious reasons

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

It has been researched that cbd oil is effective for pain relief and I've read severe pain as well. It would also benefit those suffering from Parkinson's, tics and possibly Tourettes. It certainly should be a 'choice' for treatment.

Higher prices or price fixing hinders accessibility - no brainer really!

Through a registered practitioner is a good option and pharmacy.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

I have chronic pain for many years I'm also type 1 Diabetic

I do not take pain killers anymore as they all have bad side effects

I believe good natural CBD oil will be a great help to me & millions of others

I don't want to get stoned and CBD oil will not have that effect

It's a natural plant that was in almost everything not that many years ago

Please legalise it asap and make it affordable for the average person to access

It needs to be affordable because if Big Farma gets control prices will not be manageable for the average person

Have registered stores or sellers

I would use CBD in a safe way and read the label and warnings.

Spent some time in USA in 2019, tried CBD as a friend recommended it for anxiety & pain. I felt safe and it had little to no side effects. I would choose it over any pharmaceutical option. I would recommend it to anyone.

High prices would turn people away from purchasing it and force them to turn to other means (black market). It must be affordable for all.

I believe it should not be sold from any and every retailer but does not have to be controlled by medical professionals.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I have been suffering from Anxiety, sleep issues, depression as well as inflammation from intended regular physical exercise. I have used CBD products, acquired through the black market, which has helped me ten fold in all those aspects. My anxiety dissipates quickly, my depression lifts and I see the brightness in the world. Recovery time is expedited and my focus is razor sharp. I truly believe that this is the way forward and will bring positive results to many of my friends and family members. Not to mention that I would no longer have to go through illegal routes to obtain something I consider an essential medicine for me.

I think that pricing will be important for a lot of Australians, personally I would be happy to pay different price points for different strains/quality/potency. I don't believe it should be high cost as it would create a barrier of entry for a lot of people especially in these pandemic times.

Currently it's black market, which isn't good. I would like to see easier access to this medicine for all.

I would use CBD in a safe way and read the label and warnings.

The proposed change would have a significant impact on myself and my partner. We have both used over the counter CBD oil when overseas with great effect, including helping to get a restful sleep. I have suffered anxiety for most of my life and when using a CBD oil such as the one being proposed here it has had a serious impact, reducing the effects of my anxiety

The price of CBD is important for all Australians as it's benefits should be able to be accessed by all. Mild sleep disorders and mild anxiety infiltrate the lives of everyone, not just those in a higher socioeconomic bracket. If something so safe and simple can decrease alcohol and other drug abuse then what a win for Australia as a whole

The best way for the public to access cbd oil is low cost and over the counter. Anything else is a waste of time, money and resource s

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

I believe CBD oil should be widely accessible. It can help me, my husband and mother to manage every day stress, have sound uninterrupted sleep and feel well rested in the morning without any side effects as it does from pharma-medication and alcohol.

Price should be very affordable, the lower the price - the better. I believe access to CBD can help people to quite smoking, alcohol and drug addictions, because people use these substances to help themselves to relax and manage everyday stress, but at the end these substances are all harmful to health: physically, emotionally and mentally, while CBD can help not only to relax and manage stress, it also promotes long lasting positive health benefits: physical, emotional and mental, overall well-being.

Public should have access to CBD through the health and pharma shops, and general supermarkets. It should be sold in the same way as other therapeutic goods (vitamins and dietary supplements) are sold.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

Cbd is a natural plant medicine with very low associated risk. It should be widely available at a low cost. Don't let big pharma continue to destroy our health

Aussies pockets are tightening up. Health needs to be made affordable

Private enterprise with strict randomised testing and labeling laws

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I would use CBD in a safe way and read the label and warnings.

I have fibromyalgia so often have pain after using muscles that don't get impacted daily. I prefer to try soaking in a warm Epsom Salts bath & use creams, lavender oil or Ice Gel to combat pain before resorting to painkillers as they upset my stomach. I have never used mind altering drugs but if CBD proves to work for pain without the side effects so often experienced with Pharmaceutical drugs, I would be prepared to cautiously try it for pain & so get better sleep so I can cope with daily tasks & enjoy life every day, instead of just on pain-free days. I have a close friend who has severe back & hip pain & he has been hoping for official release of CBD to give him a better quality of life & pain relief until he dies (he is 90) as his painkillers give him nightmares. He was diagnosed with terminal cancer yesterday & has been subscribed morphine for pain but would prefer CBD but only if he can get it legally & readily.

I am a Pensioner & often Pensioners or those who cannot work because of pain, cannot afford to pay for high cost pain relief. As we age, we often have arthritis & all my arthritis is the result of injuries from cycling, car or gardening accidents. We need pain relief, without side effects, so we can enjoy a better quality of life in our retirement years.

It does need to be available in rural areas as well as in cities. We are often the ones who get neglected

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have mild anxiety and trouble sleeping. I have tried cbd oil in Canada where it is widely available and it had a wide range of positive effects. My sleep improved, and my anxiety was much more manageable, even on-existent. It did not have any negative side effects like other medications I have taken.

Of course it is important! Choices in healthcare must be available to the widest range of Australians that it can be. This means having as low a cost on cbd oil as is possible. I am a low income earner and I know many of my friends and work colleagues in the same situation who could also greatly benefit from cbd oil, however only if the price is low.

Through pharmacies, herbalists and naturopaths

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used it as yet but have seen amazing results from people that have used it with no side affects. Where I have seen many bad side affects with prescribed drugs being used. Don't understand why this is still a debate after so many years of positive results. Just approve it to allow people to live a healthier happier life. PLEASE

Clearly at \$300 to \$500 a script it is not affordable to the average consumer. Pretty simple to see why. I could then access it if it was cheaper.

From a pharmacy where they give simple guidance and instructions on use as they do with other medicines.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have never used it, but would try it on the recommendation of a trusted allied health practitioner or GP. I do not believe the decision should remain in the hands of Big Pharma (ie pharmacology).

Lower price would make it affordable to more people and get them off addicted drugs provided by the pharmaceutical industry.

Via allied health practioners, GPs, compounding pharmacies.

myself and many friends have successfully used cbd oil for assistance with sleep, mild anxiety, skin health, minor pain and gut issues for many years with no adverse effects. it's used were spread by word of mouth with no professional advice and I would trust it to be safer than panadol for pain for example.

although quality is of paramount importance, also an accessible price for cbd oil is important for Australians because it should be a medicine that everyone can afford and have access to.

It should be sold in pharmacies, health food shops and similar, with no restrictions. it is not a substance that can be abused and it is not harmful, even in large quantities, apart from perhaps some contraindications with some other medications or conditions. St. John's Wort is an example of a natural unrestricted substance which has contraindications with some anxiety medications.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I feel that it is appropriate for people to be able to use CBD for health concerns where they have exhausted all other options. I have had family members use low level CBD safely without pharmacists advice and they felt that there was a benefit to their health issue. I have never used it.

Cost would not be an issue to me if I felt that CBD would help me for a particular health issue.

However, across the board I believe lower prices would benefit more Australians because then everyone would have much more chance of having safe access to an alternative treatment for their particular health issue.

CBD would need to be able to be obtained legally and in the open, ie: through a pharmacy or health professional.

When things are illegal they go underground and this can contribute to illegal dealings.

I would use CBD in a safe way and read the label and warnings.

When seeking treatment for cancer-related symptoms, close families members sought the help of those who make CBD oil. Although these were not pharmacists, my family members followed their instructions very cautiously. Leftovers were used to assist stress-related sleep issues and low back pain. It would be incredibly helpful if CBD were more accessible and less stigmatised as the entire process was stressful and frightening for my family, although quite beneficial.

I believe a lower price is incredibly important as many with low back pain for example must take much time off work due to pain and suffer great financial hardship, lowering their socioeconomic status and thus their general health and wellbeing,

Please work hard to reduce the stigma.

I would use CBD in a safe way and read the label and warnings.

I've heard of the benefits CBD has on anxiety and joint inflammation. I work in natural health as a rep and have been hesitant to try what is already available on grey market because of questionable levels of thc. A high quality regulated form would allow me to improve my health in a safe way that would also be a massive massive boon for our industry

Currently, a 30ml bottle on grey market averages about \$120. For most Australians this is an absurd price. Price needs to be relative to other natural supplements so that it might be reasonable to incorporate in a treatment plan

The public has access to so many medicines that are dangerous when used off schedule already. This is a safe alternative that should be accessible to those that need it without having fear of legal ramifications at a reasonable price

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I have never used CBD oils, however for something with very few reported side effects, I would very much like peer-reviewed studies to be able to go ahead and laws based on those findings.

Australians will pay for the most effective medicine. However, there should be little profit in ensuring someones health.

With no side effects, CBD should be accessible as any other form of safe medicine. Over the counter at a pharmacy.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I know 4 older people using CBD unprescribed to support A mix of their arthritis pain, stress and anxiety, and from this they can have a peaceful sleep at night. I have several friends on prescribed cbd also which leave them feeling brighter during the days as their depression is lifted, they suggest this is much better than prescribed pills they have used previously for depression. I personally use the oil on my skin for excema

I think this should be a readily available product at an affordable cost. Coming from the medical cannabis industry I know there is enough flower produced in Australia to support patients needs.

My friends have found using the website Cannvalate has been easy and accessible, however the price for 2 months supply is quite high at \$575

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

CBD oil is. Made from Industrial Hemp and is completely safe as demonstrated by its use in USA . This would be of particular benefit to myself as a sufferer of chronic pain . I do not want to go to a doctor or pharmacists to obtain this product that is Safer than paradol . It should be freely available in supermarkets like in USA. I have particular health problems that would benefit from taking this oil

CBD oil is expensive . At least a good quality one is . It needs to be used regularly and in reasonable doses to obtain an effect for chronic. Pain . It should be available at the cheapest price . Since i am a pensioner then this is particular important .to me . I cannot afford to use an expensive product all the time .

The best way for the public to access CBD oil is via supermarkets and be freely available like in the USA . Due to the cost of CBD oil it will only be of use if the middle men in the supply chain are eliminated .

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

My mother, partner and I have been using CBD oils for some time. We use it for pain, and restful sleep.

Of course the price is important! Why is this question even in this survey? Whilst I can afford it, my parents are pensioners. Every person (including supervised CBD for kids) should be able to access this medicine. Stupid question in my opinion.

I have visited America many times, including the states where cannabis is not only allowed for medicinal purposes, but also recreational. I believe that in those states all kinds of problems are now less problematic. Eg, drink driving, domestic violence, road rage, alcoholism, and other serious community probs are substantially reduced.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I am a veteran that is niggling pain from issues derived from active service. I regularly have to take opiates to help with sleep and general comfort. I also struggle with anxiety from time to time which can be more debilitating than the pain, my experiences with SSRI's have only been negative and my few experiences with CBD have been beneficial. I think there is clear evidence that it works for some applications and should not be banned, Australians deserve the freedom to choose what medications they consume depending on applications. There are FAR more damaging medications readily available to the general public it makes little sense to keep CBD illegal.

lower dose of CBD would aid in treating symptoms of a few issues that I have to deal with while allowing me to continue my work.

I would use CBD in a safe way and read the label and warnings.

If it's unaffordable purchasing ok. Regular basis for pain management would seem impossible. Prices are very important for the consumer then it makes it accessible for all.

It would be perfect if you could access CBD through an apothecary or a naturopath, homeopath, nutritionist or a health food store which has a qualified nutritionist, homeopath, naturopath working on site. Other option was to train up individuals to specifically manage the sales and distribution of CBD oil.

Do not publish my name or my submission on the TGA website.

Partner has arthritis and other chronic conditions which I know can be helped even if by a small amount by CBD

Shouldn't be expensive as cannabis/hemp has been proven time and time again to be very economical to produce on a large scale. Quick harvest time, low water usage and it has more than one use.

On the shelf. It's not psychoactive like thc there is literally no risk to anyone from taking it.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Have not used CBD oil but have read about it extensively. I suffer from mild anxiety and would appreciate being able to try something that I believe is much safer than pharmaceutical drugs to treat my condition.

Price is always important to consumers. Given CBD is not psychoactive I don't see any reason to use price to restrict access.

I think CBD oil should be way to access ie. widely available in pharmacies and stores. By limiting access you promote access by other less desirable means (eg. online purchase from overseas, self production). In addition, easy access helps to reduce the desire for "forbidden fruit".

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

This change will impact me by allowing me to freely treat my anxiety and improve my quality of life. Having had friends with access to CBD in the past, I am well acquainted with the positive health benefits and relatively low risks it brings, especially in comparison to other medications available.

I think that the price should be as low as possible without compromising quality in order to allow access from all socioeconomic groups. This will also help the market stay out of the underground and make it more likely that people will look to legal sources for their CBD.

I think CBD would best be accessed through pharmacies, as it belongs with more specialised medication.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would be able to access it again at affordable prices. Attempted cbd trial via a pain management specialist & had to abandon due to high monthly costs. Starting at \$275 up to \$475 a month. Which was a shame as it had started making a difference with my physical & neuropathic pain. This has the potential to assist many patients, but we need flexibility to access higher strength oils or products, particularly with inflammatory issues who use it topically like myself. I would like the flexibility to buy a daytime 25mg capsule, and a 100mg one at night instead of the 5mg valium, 15mg zopiclone, 16mg melatonin I take every night to sleep.

Yes extremely important to allow as many people to benefit from it, at affordable prices & doses

Allow full retail to over 18s. This would allow an niche product industry (topical and edible forms) to develop?

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Pain relief. An alternative to harsh pharmaceuticals must become accessible. Thank you.

Too high a price will exclude my usage. This is not a luxury item. Pain costs Australia dearly each year through loss of productivity. Destroys quality of life. A safe, natural remedy to alleviate pain will lighten the load both individually and as a nation.

Over the counter. Guidance on dosage is important.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I was having problems with my sciatic nerve and struggled to have a peaceful unrestless sleep for weeks on end. Getting my hands on some cbd oil helped. While it didn't get rid of the pain, it seemed to relax my body jsut enough to be able to sleep for a few hours at a time.

Everyone wants lower prices. Making it readily accessible for people in need will only benefit

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I would use CBD in a safe way and read the label and warnings.

For a better quality of life I would like to find a way to ease my chronic back and joint pain. As I write this I am up at 2am unable to sleep due to pain. I have a friend who has had very positive results using cbd oil (prescribed). She has been sleeping much easier and is no longer reliant on her multitude of pain medications.

I think it should be available at lower cost as to make it available to all. Even if it miraculously made it onto the PBS ! Higher cost oil would make it very hard for even employed people like myself to regularly get access to it. I also fear that there would be a flood of non-approved oil made by unscrupulous suppliers on the black market that may put people at harm.

The best way would be over the counter with guidance from a pharmacist.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I used cbd oil when travelling and it made me feel relaxed.

Lower prices is important because it gives every Australian the opportunity to try something for their health. Everyone responds differently to medicine so everyone should have the chance in case it works for them.

Let people grow cannabis at home.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have fibromyalgia class 10, which means I am in extreme pain 24/7. I want to be able to take cbd oil having tried it in 1995 with success from Canada. I want off all the analgesic drugs that I currently take. My life has been terrible up to now, having strong cbd oil would allow me to be more mobile and in far less pain. And to become a member of my community again instead of house bound.

It would be wonderful if it was on the pbs system but i cant see that happening in mylife time, however with more cannabinoid farms popping up around our country a reasonnall prise other than \$180 per 500mls for a pensioner would make it easier for me to afford.

It should be put o the doctors scheme and legitimate health store allowed to sell with or without a script. Say low doses allowed over the counter and anything like 2000mls script required.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I think it is vitally important that the TGA approve wide availability of high quality CBD oil. I know several people whose level of chronic pain renders their lives a misery, through rheumatoid arthritis and other conditions. They have exhausted all currently approved medical options. Providing access to a high quality CBD oil for all Australians to use is a highly desirable option.

While lower price is always helpful for all people seeking medication, price is often a lower consideration for those who seek high quality CBD .

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Have used CBD for years with benefits even during and post pregnancy. All with positive outcomes, no ill effects and my child has always been super smart, aware of surroundings & very strong as noted by health professionals who'd visit post pregnancy. When I do not use it I have a noticeable difference in my ability to have a restful sleep, my anxiety and irregular moods return, my stress levels are harder to manage and general energy levels deplete again. It has been very good to use for the energy side as my thyroid issues causes my energy levels to deplete rapidly so am feeling lethargic to the point of wanting to sleep all day and as a mother I don't have that luxury to do so. So is an imperative part of my life to use daily.

It has to be affordable for Australians to access as it is as easy to access Panadol for pain relief, we MUST have a choice on how we choose to treat ourselves and the more we have a choice the better for everyone. We should not have to be forced to live with chronic pain or other health concerns if there is a better way than pharmaceuticals which have many ill side effects for many Australians.

Having the ability to access this without a need for a gp would be the easiest and most convenient way for myself and Australians in general. Having to access it through a gp is a deterrent for many as many gp's are not well versed in this area of medicine and so are unhelpful in helping patients be educated or advise on this treatment.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My son used CBD oil in the UK for joint pain with excellent results and highly recommended it to me for my insomnia and constant joint pain but it's too expensive and difficult to access.

Lower price would benefit all

Initially prescribed by Medical or Herbalist practitioner with patients attending regular visits for feedback

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have not tried CBD at all but feel I would benefit from it greatly for several reasons. With a diagnosis of Complex-PTSD and a history of Auto Immune Disease I suffer with pain caused by inflammation throughout my entire body. As part of the c-PTSD I suffer with anxiety on a daily basis which can be extreme some times, and I also have a periods of moderate to severe clinical depression for which antidepressants stopped working years ago. Insomnia is frequently an issue for me also, or poor quality sleep overall. I believe CBD would address all of these issues.

Of course I want it to be affordable. If it is so expensive it restricts people who need it getting access to it, then the price should be lower!

CBD should be available at chemists or health food shops.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

Hello, I suffer from Stage 4 endometriosis & have done for 15 years. No pain medication relieves the constant hormonal head aches, abdominal pain, bowel pain. I tried cbd oil in Canada & it helped so much. I can't afford to pay \$400 to go to a dr and get a prescription for it.

I have been quoted nearly \$200 just to get a script not even the oil by a dr. This seems more like a money making thing & unreasonable for students, parents, pensioners etc.

Alcohol causes more deaths, physical and mental health issues per capita than any other drug on the planet. Not to mention the violence and family trauma. How is it that CBD oil is still illegal when alcohol is legal?

From my personal research, CBD oil is a much better option for many looking to self-medicate from anxiety, and may even reduce socially unacceptable and criminal behaviour should people use this in place of alcohol.

I tried to source CBD oil for my father who was sick a few years ago, and the cost was too prohibitive, given I was forced to look overseas and could not be assured it was a genuine product. \$500-1000 per small bottle is beyond most Australians.

CBD oil should be accessible via pharmacists at first to ensure proper dispensing - without a prescription.

Heck, maybe one day it could even be sold in bottle shops like the much more physically, mentally and societally damaging drug alcohol.

My husband currently uses medicinally prescribed CBD oil. This oil has been game changing in his management of chronic pain for terminal cancer.

The cost, time, effort and hassle to obtain the cbd oil which helps him and ultimately allowed us to reduce his opiod pain medication is unbelievable.

What is already a high stress period becomes even more stressful because of the barriers and hoops required to obtain something that is beneficial. The cost that we have to pay for this medicine is far too high and should be reduced asap to allow people on pensions and who need the oil easier access.

Everyone should have a choice and a right to obtain it not based on the depth of our wallets or our ability to navigate a system designed to stop you.

If the price went up any higher than what it is now, I'm sure we would find a way to afford it because of the benefits but already we spend more than the pension on rent, medicines etc so financially it would be beyond detrimental.

It's legal in other countries - I'm really not sure why it cannot be here.

I own a gym and have been a fighter, I have had surgeries that constantly ache and cause me pain, I have a steel plate in my right wrist that was causing me so much pain I was thinking of getting surgery to remove it. I work very long hours and suffer from poor sleep, After taking cbd for 3 weeks daily all my pain vanished sleep returned to full 8hr to 9hr sleep. It has changed my life making me pain free, recovery from training and mood has improved now that i can sleep as soon as I stopped taking it pain returned and went back to disrupted sleep. If i could get high quality well price CBD it would transform my life

I am a small business owner so high pricing would exclude me from use. I simply can not afford to purchase a local product if it is very expensive and would love to support Australian products. The majority of Australians live pay check to paycheck for this amazing product to help as many people as possible we need pricing to be reasonable.

I would use CBD in a safe way and read the label and warnings.

I experience chronic pain and would like to try various methods of managing pain to minimise side effects and long term effects. The change would allow me greater choice and control over my own body, and provide more alternatives to potentially improve my quality of life. I have relatives in Canada who have reported excellent results to me but this was without pharmacist advice.

I believe therapeutic alternatives should be made available to all, that healthcare should be universally available, and that it is extremely important to keep the cost as low as possible to avoid further disadvantaging those on low incomes. Higher prices would make cbd inaccessible to me, and likely difficult to access for those who may actually benefit the most.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I have not used it personally but have been looking into it for joint pain and general health and wellbeing. I know many others that have used this product successfully for a variety of issues after consultation.

Access to such substances should be low cost so it is accessible to ALL people despite their circumstance. As a low income earner, I feel the high prices placed on therapeutic goods is unjust and discriminatory.

As it stands, the public can access CBD oil at high prices and in secrecy as a result of legalities. Legalisation of CBD would allow for greater access and availability at a lower cost to the consumer. Reputable organisations, many already existing, should be granted the ability to stock CBD products, with consultations as with naturopaths etc, not just pharmaceutical companies who stand to make a huge profit off the public.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

As a mother who has a child with special needs, I have seen the positive benefits that other families have experienced with the use of cbd oil who have it available to them in other countries. It would be good for us to have access to this so that we too may be able to experience these positive results. We have not used cbd oil but knowing that it is available to us could be very good for the future if we decide to do so.

Lower prices would make it more readily available for all Australians who may be suffering with mild pain or issues. Lower Price should not mean a lower grade quality.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

In the interim report from The Expert Committee on Drug Dependence's Thirty-ninth Meeting in Geneva, on 6-10 November 2017 stated that, "To date, there is no evidence of recreational use of CBD or any public health related problems associated with the use of pure CBD." This natural product should be regulated only in its purity, not in its availability to the public.

I have been using CBD for insomnia and anxiety, and it has helped me with these things and more. My joint pain is no longer present in an old knee injury, my back pain is controlled by CBD and I generally feel happier and healthier.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have a history of insomnia. While in the USA two years ago I was able to legally use good quality over-the-counter CBD oil and it helped significantly with my sleep. I would like to have this safe, natural option available to me here in Australia, without having to see a GP.

Obviously it would benefit more people if they have access to affordable and safe CBD to self treat mild complaints and in the process prevent worse conditions (for instance sleep deprivation can lead to more serious mental health issues which can be prevented by good quality and quantity sleep, which is something CBD can easily help with).

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I know a number of people who take cannabis to assist them greatly with their pain, improve sleep and many benefits. Although technically illegal they do this because it works and without side effects. The pharmaceutical products they take don't work, often have terrible side effects including addiction, liver failure, etc.

The people I know aren't criminals but made to feel like that but they do what works for them.

Nature provides and I've seen it first hand the benefits for many people.

Absolutely critical. Quite often the people who need CBD most can't work so they do not have much in way of funds.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Not for myself - a friend has an autistic son who also Suffers severe epilepsy - he is now 18. His mother has been advised that CBD may be very beneficial for her son. She is on a very low income and the son is on a pension. Low cost CBD properly supervised and administered could make a huge difference the quality of life for them both.

To make it accessible to the many people on low or no income

Dr recommendation - only through pharmacist

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My family members have had to illegally access these products in the past for treatment of pain. Opioid based (oxycontin, codeine) painkillers were prescribed for it by doctors but caused terrible nausea.

If the price is set too high, illegal access may still be preferred depending on street market rates, defeating the purpose of making it available and also meaning that impurities such as psychoactive THC may still be present.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

CBD is the only medicine that has helped my varying stomach problems after decades of expensive specialist appointments. Unfortunately, I need a high dose CBD for my condition and it is currently extremely expensive. I have had to ration my dose lately because of financial hardship and my symptoms are beginning to get worse, which is also impacting my mental health.

CBD is not dangerous in high doses, so safety is not the biggest challenge in access. Lowering the price by at least half and providing higher dose CBD would essentially mean an affordable cure for my debilitating condition.

The current price for CBD is bafflingly expensive. High price and low potency. With many Australians currently facing financial insecurity, allowing private companies to charge hundreds of dollars for a small 30ml bottle of low dose CBD is abhorrent. This medicine should not just be available to the wealthy.

I currently receive my CBD through the post. Sick and vulnerable people should not be forced to travel in person to a pharmacy, but I do believe pharmacies should stock low cost, broad spectrum CBD and a variety of CBD products. The TGA should also encourage small business by allowing independent enterprise away from the pharmaceutical industry and shareholders.

The best way for public access is for the TGA to treat CBD like any other mild non-toxic anti-inflammatory. The bureaucracy surrounding access and affordability of this innocuous medicine is absolutely causing unnecessary pain to many Australians like myself.

My mother is in a lot of pain with her back but she knows if she keeps taking the Endone tablets she will become addicted. This is where we think the cbd oil will become Helpful is it will help with the pain and mum still be able to move around With less pain and nonaddictive. I would try it for my xxxxxx condition and to help me sleep if it meant that I could get off my tablets which I know are highly addictive. Thank you.

I think you would have to make it Affordable for pensioners as I would think that age Bracket would benefit from its use.

I think pharmacies and a tight rein on other Places that could sell the CBD Should be available.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

CBD has an historically proven track record of healing with much less side effects than a lot of pharmaceutical chemicals. Any concern for good health should include those remedies that work.

The price of CBD should be governed only by the cost of production and a fair profit margin. Many folk who would otherwise benefit from it would be excluded if the cost were artificially inflated.

If the production quality is regulated, there should be no problem selling it in health food stores and pharmacies.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I work in the nursing home sector and on a daily basis deal with clients both cognitive and non-cognitive with a raft of non-specific pain and discomfort problems. Many are without thorough or comprehensive medical reviews that consider the random and unpredictable nature of their conditions. Others are on analgesic medications which have unfortunate consequences esp with regard behaviour or sleep or bowel management. It is very difficult to get this right for suffering older Australians and there needs to be a wholesale consideration of an alternative product that does not require doctor approval but can give the individual some choice. Clients with pain management issues I see every day and the GPs, with short contact appointments, do not see the consequences the pain has on those clients.

not aware of dosing. I would image low dosing for mild management would be a ideal starting point with titration as required and in response to individual response to this medication or development of side effects - if either were to happen

We recently had a cognitive client in care who had his own medicinal CBD product. He stated it cost a lot of money but due to confusion over regulations we could not lock it in our S8 cupboard. Administration was only supervised which was not always exact. Due to need to refrigerate the product we had to put in a fridge in his room and we could not lock this fridge. Overall the absence of any structural or policy clarity left the facility at risk whilst we supported this main in personal choices. If this product works for people then they should have a right to have it and use it and sitting outside of pharmaceutical company controls is maybe not a bad thing. We need to have new ways of looking at treatment options for people esp in an increasing dementia laden aged care environment.

I would use CBD in a safe way and read the label and warnings.

If CBD products were readily available as over the counter medications I would easily and safely be able to manage both minor and major issues in my life. Minor issues such as restlessness and appetite, major issues such as stress, depression, anxiety and PTSD symptoms. This change would impact my life in a majorly positive way.

Why hasn't it been available already?

Price should be cheap. Competition between brand in pricing should be encouraged.

In my personal opinion it wouldn't even need to be purchased from a doctor or pharmacist. It should be available in grocery stores.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Used plenty of strains with varying THC/CBD content, medicinal or recreational, to manage mild pain (recovering from running injuries and surgery for family members) with zero repercussions. Often CBD or low dose THC/CBD mixtures work better than prescription medicines like oxycodone, which are much more dangerous and easily abused.

I don't care about the price so long as it's reasonable. Lower would be better for the general population to access it.

Cannabis is very safe and has very low associated risks (i.e cannot overdose, low addiction liability, etc), used medicinally or recreationally, and it's honestly laughable that the TGA thinks this process necessary when numerous other western nations have legalised the plant itself, let alone CBD concentrates. CBD itself doesn't have any recreational utility, it does not get you high. It is less dangerous than acetaminophen, while arguably having more medicinal uses.

Change the schedule not just for CBD but cannabis itself, let authorised stores sell it in a regulated way, with standardised dosages and age restrictions much like alcohol.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Wealthy people can almost always access what they want anyway. Lower prices would make this important natural medicine accessible to the rest of us.

There is no evidence that supports the current restrictions on CBD. On the contrary, the evidence suggests that it should be easily accessible.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I used to suffer from anxiety which has now become more mild, however I found the effects of anti-anxiety medication was not worth the positives. Safe CBD use for my anxiety would provide benefits to my overall health and wellbeing. My mother suffers from irritable sleep as well as anxiety and stress. She struggles day to day to handle the stress that arises from work and owning her own shop. We believe that safe CBD use will provide a significant benefit to her day to day life, with positive impacts on her overall health and her family life.

I think most Australians want safe access to CBD medications but it also needs to be accessible. A higher price will reduce access for those who can't afford it, who may benefit from it the most. Lower CBD prices should be a main focus in legalising access to CBD without a prescription. People should not have to worry about affording medication that will benefit them.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

This proposed change would be welcome in my family.

CBD has been used by myself for a range of issues whilst living overseas in countries where it has already become legal (the USA & Canada) I suffer from an autoimmune disorder called as Ehlers- Danlos (a connective tissue spectrum disorder characterized by hyper flexible joints) and a number of related comorbidities that affect my day to day life

My personal experience has been overwhelmingly positive and moving back to a country where I cannot legal access it has greatly affected me in a negative way. I require more pain medication than I have previously taken and visit physiotherapists and doctors at double the rate I did living overseas.

My quality of life here in Australia has diminished considerably since I can't access CBD here and I would happily move back overseas if that was an option.

Having it become legal here will impact me greatly - I am only in my 30s and without the relief I get from CBD to treat my illness I am suffering greatly.

Lower prices would be nice - I think keeping products at a high cost is prohibitive to those who need it - its classist to make something that is not expensive to product deliberately expensive to try and discourage people from accessing it. I think ALL Australians should be able to access CBD at a reasonable and affordable price just as we can access OTC medications such as vitamins, supplements and other pharmaceuticals

I believe CBD should be treated like any other herbal supplement you

see available freely and without issue all over the shelves at Chemists/Pharmacies. It has no know side-effects and it doesn't have any contraindications with other medicines such as some supplements do. I think it should be pharmacist only to begin with but it should be accessible to all adults.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I have previously used CBD for stress and anxiety issues in the past and found that it helped a lot. Having access to a controlled CBD dose from a pharmacy would mean I have an easy method to control feelings of stress and anxiety when they come up.

I believe CBD is highly beneficial and should be accessible to everyone including people that may not be financially well off. Therefore, it should be as cheap as reasonably possible without compromising on quality.

I believe the best way to access CBD would be through a pharmacy where a trained pharmacist can issue it depending on the symptoms of the person coming in.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

Traveled to Canada where it is widely available. Used it to great relief and am looking forward to the day that it is legal in Australia. Helped my sleep and anxiety.

I think the prices would need to be affordable so many patients can access it. It does not have the same negative externalities of alcohol so I think a lower tax bracket would be more appropriate.

The system Colorado used (from my understanding) to first issue marijuana seems effective. Major points were:

1. All product must be tested and those results listed on the product (for mold, pesticides, etc.)
2. Clear label of the mg/% of active product (THC/CBD)
3. All locations were secure with active monitoring
4. Open market with a tax

I would want to ensure that in Australia the market is not dominated by a few major players, but is open to anyone as long as they follow the appropriate guidelines and rules. Additionally home cultivation seems appropriate.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

If available, I would like myself or my loved ones to try CBD for mild pain.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

CBD was used safely for shoulder/nerve pain. Substantial relief was experienced.

The price of CBD is important for Australians so all Australians in need of its medicinal benefits have access to it

The best way for the public to access CBD is through all appropriate outlets and shops

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I'm a long term sufferer of anxiety and I'd like to find an alternative to SSRI medication as it has a lot of side effects.

Pricing should be competitive with anxiety medication

Yes without advice & it Helps A Lot with the pain in my hands from Arthritis

it Must be affordable for Everyone, especially those on Benefits.
As most of the Cinditions it helps with are those of Not Being Able to Work.

Or Maybe is Priced mid range and given cheaper to people with a Script.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I would use CBD in a safe way and read the label and warnings.

CBD has been known to give relief when all other medications have failed. So what are you waiting for ?? Leave big pharma out of it...

Why would you make it a higher cost than necessary?? There's too much of that going in on pharmacy.

There needs to be education on this product. People wouldn't be accessing it now if it didn't help solve their issues. If it can replace some of the poisons prescribed now it will be well worth freeing up the access.

Only publish my submission on the TGA website with confidential information redacted. Personal details

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I'm willing to try a quick, natural relief for my anxiety and sleep conditions and I believe CBD have help. We must see what other countries have been before us and make a well informed decision for our selves.

There should be different prices points dependent on the CBD strength, type etc. A lower price would get more Australians access and help from CBD medicines.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

as an active and fit person i get i injuries from time to time and whilst overseas i had the opportunity to experience the relief CBD provided. it was great knowing i could have pain relief with zero chance of harm and no nasty chemicals.

i believe a wide range of tiers should be available and fre market should regulate the price

i appreciate the opportunity to be able to submit this
