

TGA Consultation Submission

Kylah Morrison

Monday 8th May, 2017

I'm writing this submission as the mother of three children under five years of age.

I support Option 1 and 2 of the Consultation Paper and oppose options 3 & 4 in relation to homeopathic products/ medicines.

I have used homeopathy for acute illnesses such as ear aches, coughs, colds, insect bites etc. with outstanding results with all my children. I have also used homeopathy at a more constitutional level and noticed significant improvement to their wellbeing and increased immunity to anything 'going around' the community in particular gastro and flu.

I have also used homeopathy myself for acute illnesses and at a constitutional level and noticed instant improvements and an improvements to my wellbeing and immunity also.

I love that homeopathy is a gentle alternative to traditional over the counter medicines that are particularly harsh on my family's gut health and overall immune systems and wellbeing.

In addition to my own personal evidence that homeopathy is such an effective treatment for medical conditions in my family, I cite the following research to support the effectiveness of homeopathy:

1. Mathie RT et al. Randomised placebo-controlled trials of individualised homeopathic treatment: systematic review and meta-analysis. *Systematic Reviews*, 2014; 3: 142
https://www.hri-research.org/wp-content/uploads/2015/10/HRI_ResearchArticle_29_RobertsTournier_IndividualisedHomeopathyReview.pdf
2. There is a Swiss Report on Homeopathy which stated "There is sufficient evidence for the preclinical effectiveness and the clinical efficacy of homeopathy and for its safety and economy compared with conventional treatment." <https://systematicreviewsjournal.biomedcentral.com/articles/10.1186/2046-4053-3-142>

Yours faithfully,

Kylah Morrison (Mother)
