

Submission to the Therapeutic Goods Administration in relation to
classification of homoeopathic medicines:

To Whom It May Concern

I wish to express my view on the classification of homeopathic medicine:

- I strongly oppose Option 4, which seeks to classify homeopathic medicine as a non-therapeutic good.
- I strongly support Option 1 - the continued classification of homeopathic medicine as a therapeutic good, with no restrictions to access.
- I support option 2.
- I oppose option 3.

My view is based on my personal experiences over many years with homeopathic treatment.

I have treated numerous ailments for myself and my family with homeopathic remedies, which I have obtained under direction of a highly qualified homeopath.

The benefits of this type of treatment include its lack of side effects and its amazing ability to promote healing naturally using the bodies' own immune system.

I am not sure of the reason for this investigation of options, but anecdotally, I can tell you that I have had nothing but positive results from the use of homeopathy and I cannot understand why, just because these goods are not produced by a pharmaceutical company, they are being considered to be non-therapeutic. They are nothing but therapeutic, with no side effects, unlike most conventional pharmaceutical products.

Please take my submission into earnest consideration.

With Regards

Dr Gabriel Poole

I would like to add that the Queen of England seems to be doing alright on homoeopathics!
