

As a strong supporter of homeopathic remedies who has benefited from them many times, I strongly oppose Options 3 and 4 of the regulatory options currently under consideration by the TGA in relation to homeopathy.

Homeopathy is a low risk complimentary medicine, used safely worldwide. The role of the TGA is to protect our safety in relation to medicine and treatments, not to restrict access to medicines which are considered 'low-risk' not only by themselves, but by every drug regulating authority around the world.

Use of homeopathy in my day to day life has helped with everything from small ailments and injuries sustained by my children, to supporting my elderly mother with a quick and trouble free recovery from her recent total knee replacement. The nurses at the hospital just could not understand why she was the only patient with absolutely no bruising or redness within a few days of this invasive operation.

Please do not restrict our access to this safe and elegant complimentary medicine. I strongly oppose anything which will lessen the availability of the remedies to anyone who chooses to use them on their own, or alongside allopathic medical treatments.

Thank you.
